3080 *jourcl* – Cover letter for journal submissions

Web page on CTAN <https://ctan.org/pkg/jourcl>

name	<i>jourcl</i>
caption	Cover letter for journal submissions
author	Kukovec, Rok
license	cc-by-sa-4 = CC BY-SA 4.0 (free)
version	(2022-12-16)
last changes	2022-12-16
year	2022
description	(no language specified) Paper submissions to journals are usually accompanied by a cover letter. This package provides a LaTeX class and a template for such a cover letter with the following main features: • Minimalistic design. • Custom image. • Pre-defined commands for journal name, author, date, etc. • Many macros contained in this package speed up the process of preparing the necessary ingredients for the cover letter. • Macros for recommending up to three reviewers and/or editors. • ORCID logo and link to the submitting author's ORCID page. • Controls for adding a "Conflict of interest" statement and declaration. • Custom greeting (e.g., "Dear Editor" for a regular submission, "Dear Editor-in-Chief" for a submission to a journal's special issue, etc.) • Predefined valedictions for different types of submissions (e.g., Yours sincerely, Yours faithfully, Best regards, etc.)

3081 *jourrr* – A LaTeX template for journal rebuttal letters

Web page on CTAN <https://ctan.org/pkg/jourrr>

name	jourrr
caption	A LaTeX template for journal rebuttal letters
author	Kukovec, Rok
license	cc-by-sa-4 = CC BY-SA 4.0 (free)
version	(2023-10-14)
last changes	2023-10-14
year	2023
description	(no language specified) This package provides an elegant LaTeX template designed for crafting professional rebuttal letters in response to editors or reviewers. It consists of a LaTeX class and a template, fine-tuned to support your publishing journey with several pre-defined commands that drastically speed up the process of preparing letters during the revision process. The repository hosts a template for writing responses to editors/reviewers comments for journal submissions written in LaTeX that is minimalistic in one way while pre-defined with several commands that drastically speed up the process of preparing letters during the revision process. Main Features of this template: • With front page included

- **Response ticks** to mark as completed
- Custom response color
- Minimalistic design
- Everything is customizable
- Predefined commands for a journal name, submission ID, author, editor, associate editor, date, etc.
- Many macros included
- Predefined different valedictions for different types of submissions (e.g., Yours sincerely, Yours faithfully, Best regards, etc.)
- Custom greeting (e.g., "Dear Editor" or bDear Editor-in-Chief" for regular submission, etc.)
- (Optional) Table of contents, jump to the reply you wish to address
- Option to add custom Signature (i.e. an image of your hand-written signature)

3084 *jpeg2ps* – Convert JPEG files to PostScript Level 2 or 3 EPS

Web page on CTAN <https://ctan.org/pkg/jpeg2ps>

name	<i>jpeg2ps</i>
caption	Convert JPEG files to PostScript Level 2 or 3 EPS
author	Merz, Thomas
copyright	Thomas Merz (1994-1999)
license	nosell = Do Not Sell Except by Arrangement (not free)
version	1.8
description	(no language specified) Converts JPEG files to PostScript Level 2 or 3 EPS. In fact, <i>jpeg2ps</i> is not really a converter but a "wrapper": it reads the image parameters (width, height, number of color components) in a JPEG file, writes the according EPS header and then copies the compressed JPEG data to the output file. Decompression is done by the PostScript interpreter (only PostScript Level 2 and 3 interpreters support JPEG compression and decompression).

Web page on CTAN <https://ctan.org/pkg/jslectureplanner>

name	jslectureplanner
caption	Creation and management of university course material
author	Spitzmüller, Jürgen
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.15 (2025-10-02)
last changes	2025-10-02
year	2025
description	(no language specified) The <code>jslectureplanner</code> package facilitates the generation and management of university course material. It provides an interface to set up and access centralized course data that can be reused in all course documents. Furthermore, the package is able to calculate the session dates of a whole semester and generate course programs, if the course is held weekly and the date of the first lecture is specified. Moreover, the package can be used to generate a sectioned course bibliography via BibLaTeX. The bundle also includes a package <code>jsmembertable.sty</code> that helps in generating course member and presence lists.

author	Wolfsteiner, Lukas
copyright	Lukas Wolfsteiner (2026)
license	mit = MIT License (free)
version	1.0.2 (2026-01-31)
last changes	2026-01-31
year	2026
description	(no language specified) A minimal LuaLaTeX package for rendering JSON Resume data into clean, professional resumes.

Features

Full JSON Resume Schema Support All 12 sections (basics, work, volunteer, education, awards, certificates, publications, skills, languages, interests, references, projects)

Load from File or URL Local JSON files or remote URLs

Schema Validation Strict mode warns about schema violations

Clean FAANG-style Formatting Professional typography with no distracting design elements

Customizable Section Titles Override default section headers

Requirements

LuaLaTeX Part of TeX Live or MiKTeX

curl For URL loading, pre-installed on most systems

year	2025
description	(no language specified) This package supports the Junicode variable fonts for LuaLaTeX. The Junicode font is primarily for scholars and students of the Middle Ages, but it serves users with a wide variety of interests. It tracks the development of the Medieval Unicode Font Initiative (MUFI), with its wealth of specialized medieval characters, but it also provides many OpenType features that allow users to access MUFI characters in accessible ways.

3107 *jurabib* – Extended BibTeX citation support for the humanities and legal texts

Web page on CTAN <https://ctan.org/pkg/jurabib>

name	<i>jurabib</i>
caption	Extended BibTeX citation support for the humanities and legal texts
author	Berger, Jens
license	gpl = GNU General Public License (free)
version	0.6
description	(no language specified) This package enables automated citation with BibTeX for legal studies and the humanities. In addition, the package provides commands for specifying editors in a commentary in a convenient way. Simplified formatting of the citation as well as the bibliography entry is also provided. It is possible to display the (short) title of a work only if an authors is cited with multiple works. Giving a full citation in the text, conforming to the bibliography entry, is supported. Several options are provided which might be of special interest for those outside legal studies—for instance, displaying multiple full citations. In addition, the format of last names and first names of authors may be changed easily. Cross references to other footnotes are possible. Language dependent handling of bibliography entries is possible by the special language field.

3111 *jvlisting* – A replacement for LaTeX’s verbatim package

Web page on CTAN <https://ctan.org/pkg/jvlisting>

name *jvlisting*
caption A replacement for LaTeX’s verbatim package
author Voss, Jochen
copyright Jochen Voss (2011)
license lpl = The LaTeX Project Public License (free)
version 0.7
description (no language specified) This package provides a LaTeX environment `listing`, an alternative to the built-in `verbatim` environment. The `listing` environment is tailored for including listings of computer program source code into documents.

The main advantages over the original `verbatim` environment are:

- environments automatically fixes leading whitespace so that the environment and program listing can be indented with the rest of the document source, and;
- `listing` environments may easily be customised and extended.

3117 kanaparser – Kana parser for LuaTeX

Web page on CTAN <https://ctan.org/pkg/kanaparser>

name	kanaparser
caption	Kana parser for LuaTeX
author	Zahumensky, Adam
license	bsd = BSD Style License (free)
version	1.0
description	(no language specified) The package provides a kana parser for LuaTeX. It is a set of 4 macros that handle transliteration of text: 1. from hiragana and katakana to Latin 2. from Latin and katakana to hiragana 3. from Latin and hiragana to katakana It can be used to write kana directly using only the ASCII character set or for education purposes. The package has support for obsolete and rarely used syllables, some only accessible via the provided toggle macro.

3133 *kerntest* – Print tables and generate control files to adjust kernings

Web page on CTAN <https://ctan.org/pkg/kerntest>

name	kerntest
caption	Print tables and generate control files to adjust kernings
author	Harders, Harald
license	lppl = The LaTeX Project Public License (free)
version	1.32

description	(no language specified) This class makes it easy to generate tables that show many different kerning pairs of an arbitrary font, usable by LaTeX. It shows the kerning values that are used in the font by default. In addition, this class enables the user to alter the kernings and to observe the results. Kerning pairs can be defined for groups of similar glyphs at the same time. An mtX file is generated automatically. The mtX file may then be loaded by fontinst to introduce the user-made kernings into the virtual font for later use in LaTeX.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/kerntest/README

3134 ketcindy – Creating graphics for TeX using Cinderella

Web page on CTAN	https://ctan.org/pkg/ketcindy
name	ketcindy
caption	Creating graphics for TeX using Cinderella
author	Takato, Setsuo
copyright	Setsuo Takato (2014-2019)
license	gpl3+ = GNU General Public License, version 3 or newer (free)
version	20191225.0

description	(no language specified) KeTCindy combines a plugin to Cinderella with free mathematical software (R, Maxima, ...) to produce high-quality LaTeX graphics. Using Cinderella to generate graphics in an interactive environment, the generated image can be fine-tuned using KeTCindy commands embedded into CindyScript, the scripting language of Cinderella. KeTCindy can be regarded as a prominent scheme to establish an effective linkage between visualization tools and editing tools. Moreover, KeTCindy enables the importation of data calculated or simulated using other mathematical software such as Maxima, Fricas, Risa/Asir and R, and to combine them with the graphical data, so that an extremely wide range of mathematical objects can be presented.

3135 *keycommand* – Simple creation of commands with key-value arguments

Web page on CTAN <https://ctan.org/pkg/keycommand>

name	keycommand
caption	Simple creation of commands with key-value arguments
author	Chervet, Florent
copyright	Florent Chervet (2009-2010)
license	lpl = The LaTeX Project Public License (free)
version	3.1415
description	(no language specified) The package (which requires e-TeX) provides a natural way to define commands with optional keys. The package provides <code>\newkeycommand</code>, <code>\renewkeycommand</code>, <code>\providekeycommand</code>, <code>\newkeyenvironment</code> and <code>\renewkeyenvironment</code>, together with <code>\keycmd</code> for a more advanced interface. The package is based on kvsetkeys by Heiko Oberdiek.

3136 **keyfloat** – Provides a key/value interface for generating floats

Web page on CTAN <https://ctan.org/pkg/keyfloat>

name	keyfloat
caption	Provides a key/value interface for generating floats
author	Dunn, Brian
copyright	Brian Dunn (2016-2024)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.09
description	(no language specified) The keyfloat package provides a key/value user interface for quickly creating figures with a single image each, figures with arbitrary contents, tables, subfloats, rows of floats, floats located [H]ere, floats in the [M]argin, and floats with text [W]rapped around them. Key/value combinations may specify a caption and label, a width proportional to \linewidth, a fixed width and/or height, rotation, scaling, a tight or loose frame, an \arraystretch, a continued float, additional supplemental text, and an artist/author's name with automatic index entry. When used with the tocdata package, the name also appears in the List of Figures. Floats may be placed into a row environment, and are typeset to fit within the given number of columns, continuing to the next row if necessary. Nested sub-rows may be used to generate layouts such as two small figures placed vertically next to one larger figure. Subfloats are supported by two environments.

3152 *kkran* – Generate answer fields in tests and exams

Web page on CTAN <https://ctan.org/pkg/kkran>

name	KKran
caption	Generate answer fields in tests and exams
author	KKTeX
copyright	Kosei Kawaguchi (2025-2026)
license	mit = MIT License (free)
version	1.1.6 (2026-02-20)
last changes	2026-02-20
year	2026
description	(no language specified) A Lua- and TikZ-based package created for the Japanese education sector. It enables the arrangement of box-shaped answer fields in any desired combination using simple commands. It also facilitates the easy creation of multiple-choice answer sheets (mark sheets). Furthermore, it covers the functionality of toggling the display of model answers (solutions) via an option, and even the creation of grid-style answer fields (graph paper-like cells). The package name originates from ”欄 (:ran)”, which means ”a small piece of area”, or ”a small space”.

3153 *kksymbols* – LaTeX commands for enclosing characters in circles, squares, diamonds, or brackets

Web page on CTAN <https://ctan.org/pkg/kksymbols>

name	KKsymbols
caption	LaTeX commands for enclosing characters in circles, squares, diamonds, or brackets
author	KKTeX
copyright	Kosei Kawaguchi (2025-2026)
license	mit = MIT License (free)
version	2.1.4 (2026-04-17)
last changes	2026-04-17
year	2026
description	(no language specified) This package offers LaTeX commands for enclosing characters in circles, squares, diamonds, or brackets, with automatic scaling and baseline correction to ensure correct appearance in both horizontal and vertical writing modes. The package relies on TikZ and works only with LuaLaTeX.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/graphics/pgf/contrib/kksymbols/README.md

Web page on CTAN <https://ctan.org/pkg/knuth-hint>

name	knuth-hint
caption	HINT collection of typeset C/WEB sources in TeX Live
author	Scherer, Andreas
license	knuth = Knuth License (free)
license	pd = Public Domain Software (free)
version	2.5 (2024-08-12)
last changes	2024-08-12
year	2024

description	(no language specified) The <code>knuth-hint</code> package contains the large collection of HINT documents for many of the CWEB and WEB sources of programs in the TeX Live distribution (and, for technical reasons, a PDF document for XeTeX). Each program is presented in its original form as written by the respective authors, and in the “changed” form as used in TeX Live. Care has been taken to keep the section numbering intact, so that you can study the codes and the changes in parallel. Also included are the “errata” for Donald Knuth’s “Computers & Typesetting”. HINT is the dynamic document format created by Martin Ruckert’s HiTeX engine that was added to TeX Live 2022. The HINT files can be viewed on Linux, Windows, and Android with the <code>hintview</code> application. The <code>knuth-hint</code> package is a showcase of HiTeX’s capabilities.

3172 *koma-script* – A bundle of versatile classes and packages

Web page on CTAN <https://ctan.org/pkg/koma-script>

name	<i>koma-script</i>
caption	A bundle of versatile classes and packages
author	Kohm, Markus
copyright	Markus Kohm (1994-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	3.43 (2024-10-24)
last changes	2024-10-24
year	2024
description	(no language specified) The KOMA-Script bundle provides replacements for the <i>article</i> , <i>report</i> , and <i>book</i> classes with emphasis on typography and versatility. There is also a <i>letter class</i> .

The bundle also offers:

- a *package for calculating type areas* in the way laid down by the typographer Jan Tschichold,
- packages for easily changing and defining page styles,
- a package *scrdate* for getting not only the current date but also the name of the day, and
- a package *scrtime* for getting the current time.

All these packages may be used not only with KOMA-Script classes but also with the standard classes.

Since every package has its own version number, the version number quoted only refers to the version of *scrbook* , *scrreprt* , *scrartcl* , *scrlettr2* and *typearea* (which are the main parts of the bundle).

3180 **komacv-rg – LaTeX packages that aid in creating CVs based on the komacv class and creating related documents**

Web page on CTAN <https://ctan.org/pkg/komacv-rg>

name	komacv-rg
caption	LaTeX packages that aid in creating CVs based on the komacv class and creating related documents
author	Grewe, Richard
copyright	Richard Grewe (2016-2018)
license	lppl1.2 = The LaTeX Project Public License 1.2 (free)
version	0.9.2
description	(no language specified) The komacv-rg bundle provides packages that aid in creating CVs based on the komacv class and creating related documents, such as cover letters and cover sheets for job applications. Concretely, the bundle consists of three packages: komacv-addons, komacv-lco, and komacv-multilang. • komacv-addons is a small collection of add-ons and fixes for the komacv class; • komacv-lco enables the use of letter class options from scrlltr2 also in komacv-based and other non-scrlltr2-based documents; • komacv-multilang enables the provisioning of CVs in multiple languages and the selection of a language via babel or polyglossia.

3181 **konwerter** – A program for automatic numbering of compounds in chemical publications

Web page on CTAN	https://ctan.org/pkg/konwerter
name	konwerter
caption	A program for automatic numbering of compounds in chemical publications
author	Wawrzyniak, Piotr
license	gpl2 = GNU General Public License, version 2 (free)
version	0.2.4

description	(no language specified) Konwerter automatically numbers compounds in chemical publications created by LaTeX . It is written in C++ and works both in Unix and Windows operating systems. It works similar to LaTeX <code>\label</code> and <code>\ref</code> commands. Instead of giving number to every compound you give them labels and then refer to the structure in the text using the same label. The konwerter is able to resolve labels to numbers both in the eps files and in the text.

3188 kpfonts – A complete set of fonts for text and mathematicsWeb page on CTAN <https://ctan.org/pkg/kpfonts>

name	kpfonts
caption	A complete set of fonts for text and mathematics
author	Caignaert, Christophe
license	gpl = GNU General Public License (free)
license	lppl = The LaTeX Project Public License (free)
version	3.36 (2024-10-27)
last changes	2024-10-27
year	2024
description	(no language specified) The family contains text fonts in roman, sans-serif and monospaced shapes, with true small caps and old-style numbers; the package offers full support of the textcomp package. The mathematics fonts include all the AMS fonts, in both normal and bold weights. Each of the font types is available in two main versions: default and ‘light’. Each version is available in four variants: default; oldstyle numbers; oldstyle numbers with old ligatures such as ct and st, and long-tailed capital Q; and veryoldstyle with long s. Other variants include small caps as default or ‘large small caps’, and for mathematics both upright and slanted shapes for Greek letters, as well as default and narrow versions of multiple integrals. The fonts were originally derived from URW Palladio (with URW’s agreement) though the fonts are very clearly different in appearance from their parent.

last changes	2025-01-15
year	2025
description	(no language specified) This bundle provides OpenType versions of the Type1 Kp-fonts designed by Christophe Caignaert. It is usable with LuaTeX or XeTeX engines only. It consists of sixteen Text fonts (eight Serif, four Sans-Serif, four Monotype) and six Math fonts. Serif and Sans-Serif families have small caps available in two sizes (SmallCaps and PetitesCaps), upper and lowercase digits, real superscripts and subscripts; ancient ligatures (ct and st), ancient long-s and a long-tailed capital Q are available via font features. Math fonts cover all usual symbols including AMS'; a full list of available symbols is provided, see the 'List of glyphs'.

3191 ksp-thesis – A LaTeX class for theses published with KIT Scientific Publishing

Web page on CTAN <https://ctan.org/pkg/ksp-thesis>

name	ksp-thesis
caption	A LaTeX class for theses published with KIT Scientific Publishing
author	Heinze, David
copyright	David Heinze (2015)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0.2 (2015-12-09)
last changes	2015-12-09
year	2015

description	(no language specified) This package provides a LaTeX class intended for authors who want to publish their thesis or other scientific work with KIT Scientific Publishing (KSP). The class is based on the scrbook class of the KOMA-script bundle in combination with the ClassicThesis and ArsClassica packages. It modifies some of the layout and style definitions of these packages in order to provide a document layout that should be compatible with the requirements by KSP.

3192 **ktbox** – Framework for semantic color, structured highlighting, and scholarly communication

Web page on CTAN <https://ctan.org/pkg/ktbox>

name	KTBox
caption	Framework for semantic color, structured highlighting, and scholarly communication
author	Mangal, Bhaskar
copyright	Bhaskar Mangal (2025)
license	apache2 = Apache License, version 2.0 (free)

version	0.0.1
description	(no language specified) KTBBox is a modular LaTeX framework that introduces semantic color palettes, structured highlight boxes, and ORCID-linked author utilities for scholarly writing. The package is composed of three lightweight and independent style files: • ktbox.sty – defines highlight boxes (standard, numbered, wide) with semantic theming. • ktcolor.sty – provides semantic color palettes with light and dark modes. • ktorcid.sty – adds ORCID-linked author commands and icons. The framework separates structure from style, ensuring compatibility with major classes such as IEEEtran, acmart, article, beamer, and ICLR. Features include numbered key-takeaway boxes, wide-format environments for emphasis, multi-column layouts, and dual light/dark themes. KTBBox aims to improve clarity, portability, and reproducibility in academic publishing across articles, posters, and presentations.

name	kurier
caption	A two-element sans-serif typeface
author	Nowacki, Janusz Marian
copyright	Janusz M. Nowacki (1998-2010)
license	gfl = The GUST Font License (GFL) (free)
version	0.995b
description	(no language specified) <i>Kurier</i> is a two-element sans-serif typeface. It was designed for a diploma in typeface design at the Warsaw Academy of Fine Arts under the supervision of Roman Tomaszewski. This distribution contains a significantly extended set of characters covering the following modern alphabets: latin (including Vietnamese), Cyrillic and Greek as well as a number of additional symbols (including mathematical symbols). The fonts are prepared in Type 1 and OpenType formats. For use with TeX the following encoding files have been prepared: T1 (ec), T2 (abc), and OT2—Cyrillic, T5 (Vietnamese), OT4, QX, texansi and—nonstandard (IL2 for the Czech fonts), as well as supporting macros and files defining fonts for LaTeX.

3211 *l3backend* – LaTeX3 backend drivers

Web page on CTAN	https://ctan.org/pkg/l3backend
name	<code>l3backend</code>
caption	LaTeX3 backend drivers
author	The LaTeX Project Team
copyright	The LaTeX3 Project (2019-2026)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	(2026-02-18)
last changes	2026-02-18
year	2026
description	(no language specified) This package forms parts of <code>expl3</code>, and contains the code used to interface with backends (drivers) across the <code>expl3</code> codebase. The functions here are defined differently depending on the engine in use. As such, these are distributed separately from <code>l3kernel</code> to allow this code to be updated on an independent schedule.

last changes	2026-02-18
year	2026

description	(no language specified) The <i>l3experimental</i> packages are a collection of experimental implementations for aspects of the LaTeX3 kernel, dealing with higher-level ideas such as the Designer Interface. Some of them work as stand alone packages, providing new functionality, and can be used on top of LaTeX2e with no changes to the existing kernel. The present release includes: • <i>l3draw</i> , a code-level interface for constructing drawings; • <i>xcoffins</i> , which allows the alignment of boxes using a series of ‘handle’ positions, supplementing the simple TeX reference point;

description	(no language specified) The <i>l3kernel</i> bundle provides an implementation of the LaTeX3 programmers' interface, as a set of packages that run under LaTeX2e. The interface provides the foundation on which the LaTeX3 kernel and other future code are built: it is an API for TeX programmers. The packages are set up so that the LaTeX3 conventions can be used with regular LaTeX2e packages.

3220 `l3regex` – Regular expression facilities for LaTeX

Web page on CTAN	https://ctan.org/pkg/l3regex
name	<code>l3regex</code>
caption	Regular expression facilities for LaTeX
author	The LaTeX Project Team
copyright	The LaTeX3 Project (2011-2024)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	(2024-12-09)
last changes	2024-12-09
year	2024

description	(no language specified) The package provides regular expression testing, extraction of submatches, splitting, and replacement, all acting on token lists. The syntax of regular expressions is mostly a subset of the PCRE syntax (and is very close to Posix), with some additions arising from the fact that TeX manipulates tokens rather than characters. For performance reasons, only a limited set of features are implemented. Notably, back-references are not supported. The package is currently distributed as part of the LaTeX3 l3kernel bundle.

description	(no language specified) The package defines two commands: • <code>\eachlabelcase</code>, which distinguishes whether a set of labels is defined, and for each label either queues action accordingly, or appends the action to a macro; and

3227 `labelfig` – Label LaTeX 2.09 figures included in documents

- `\lotlabelcase`, which takes a comma-separated list of label names, and distinguishes the resulting action on whether all were defined, whether none were defined, whether not all were defined, or whether the list is empty (again, the action resulting from `\lotlabelcase` may be written to a macro).

3243 *lametex* – A PostScript translator for a subset of LaTeX

Web page on CTAN <https://ctan.org/pkg/lametex>

name	lametex
caption	A PostScript translator for a subset of LaTeX
author	Monsarrat, Jonathan
copyright	Jonathan Monsarrat (1992)
license	nosell = Do Not Sell Except by Arrangement (not free)
version	1.1
description	(no language specified) <i>LameTeX</i> is a direct PostScript generator for a (very limited) subset of LaTeX. One of its original design goals, the inclusion of PostScript commands directly in a LaTeX document, has been superseded by PSTricks. However, one of the side effects of a special-purpose translator for LaTeX is the ability of that translator to produce different kinds of output, including plain ASCII. The system only understands a subset of LaTeX, and is not set up to use Type 1 fonts; however, it is capable of doing some interesting tricks.
documentation	(no language specified) <i>Readme</i>: https://ctan.org/tex-archive/support/lametex/README
documentation	(no language specified) <i>Package documentation (in PostScript)</i>: https://ctan.org/tex-archive/support/lametex/doc/lametex_doc.ps

3250 *langsci-affiliations* – Collect and order authors and affiliations

Web page on CTAN <https://ctan.org/pkg/langsci-affiliations>

name	langsci-affiliations
caption	Collect and order authors and affiliations
author	Kopecky, Felix
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
description	(no language specified) This package provides a command <code>\ResolveAffiliations</code> , which collects author–affiliation pairs and outputs them according to the user configuration. The package uses LaTeX3 data types. It is aimed at class authors, i.e. maintainers of document templates in publishing houses, universities, etc. It is probably not that useful to document authors. As of March 2021, this package is distributed as part of the langsci bundle.
on CTAN	https://ctan.org/tex-archive/macros/xetex/latex/langsci/langsci-affiliations.sty

3251 *langsci-avm* – Feature structures and attribute-value matrices (AVM)

Web page on CTAN <https://ctan.org/pkg/langsci-avm>

name	langsci-avm
caption	Feature structures and attribute-value matrices (AVM)
author	Kopecky, Felix
copyright	Felix Kopecky, Language Science Press (2020-2023)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.3.0

description	(no language specified) A package for typesetting feature structures, also known as attribute-value matrices (AVMs), for use in linguistics. The package provides a minimal and easy to read syntax. It depends only on the array package and can be placed almost everywhere, in particular in footnotes or graphs and tree structures. The package serves the same purpose as, Christopher Manning’s <code>avm</code> package, but shares no code base with that package.

3252 *lapdf* – PDF drawing directly in TeX documents

Web page on CTAN	https://ctan.org/pkg/lapdf
name	<code>lapdf</code>
caption	PDF drawing directly in TeX documents
author	Reimers, Detlef
copyright	Detlef Reimers (2006-2011)
license	gpl = GNU General Public License (free)
version	1.1

description	(no language specified) The package provides the means to use PDF drawing primitives to produce high quality, colored graphics. It • uses Bézier curves (integral and rational) from degree one to seven, • allows TeX typesetting in the graphic, • offers most of the standard math functions, • allows plotting normal, parametric and polar functions. The package has linear, logx, logy, logxy and polar grids with many specs; • it can rotate, clip and do many nice things easily • it has two looping commands for programming and many instructive example files. The package requires pdfTeX but otherwise only depends on the calc package.

3259 *l_{at}ex* – A TeX macro package that defines LaTeX

Web page on CTAN <https://ctan.org/pkg/latex>

name	<code>latex</code>
caption	A TeX macro package that defines LaTeX
author	The LaTeX Project Team
author	Lamport, Leslie
copyright	The LaTeX3 Project et al. (1989-2023)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	(2024-11-01)
last changes	2024-11-01
year	2024

description	(no language specified) LaTeX is a widely-used macro package for TeX, providing many basic document formatting commands extended by a wide range of packages. It is a development of Leslie Lamport's LaTeX 2.09, and superseded the older system in June 1994. The basic distribution is catalogued separately, at latex-base; apart from a large set of contributed packages and third-party documentation (elsewhere on the archive), the distribution includes: – a bunch of required packages, which LaTeX authors are "entitled to assume" will be present on any system running LaTeX; and – a minimal set of documentation detailing differences from the 'old' version of LaTeX in the areas of user commands, font selection and control, class and package writing, font encodings, configuration options and modification of LaTeX. For downloading details, see the linked catalogue entries above.

3260 latex-amsmath – AMS mathematical facilities for LaTeX

Web page on CTAN <https://ctan.org/pkg/latex-amsmath>

name	latex-amsmath
caption	AMS mathematical facilities for LaTeX
author	The LaTeX Project Team
copyright	LaTeX3 Project and American Mathematical Society (2016-2023)
copyright	American Mathematical Society (2001-2004, 2007, 2008, 2010, 2011, 2013)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2024-11-01a
description	(no language specified) The package provides the principal packages in the AMS-LaTeX distribution. It adapts for use in LaTeX most of the mathematical features found in AMS-TeX; it is highly recommended as an adjunct to serious mathematical typesetting in LaTeX. When amsmath is loaded, AMS-LaTeX packages ambsy (for bold symbols), amsopn (for operator names) and amstext (for text embedded in mathematics) are also loaded.

amsmath is part of the LaTeX required distribution; however, several contributed packages add still further to its appeal; examples are **empheq**, which provides functions for decorating and highlighting mathematics, and **ntheorem**, for specifying theorem (and similar) definitions.

3263 *latex-base-dev* – Development pre-release of the LaTeX kernel

Web page on CTAN <https://ctan.org/pkg/latex-base-dev>

name	<code>latex-base-dev</code>
caption	Development pre-release of the LaTeX kernel
author	The LaTeX Project Team
copyright	The LaTeX Project (1993-2024)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	2025-11-01 pre-release 1
description	(no language specified) This package provides a testing release for upcoming LaTeX2e kernel changes. Testing by the LaTeX team itself suggests that the code is stable and usable, but wider use by knowledgeable users is required by adding these changes to the release LaTeX kernel. Typically, the code here will be used by a TeX system to create dedicated formats, for example <code>pdflatex-dev</code> , which can then be used explicitly for testing.

3285 latex-indexer – Automate index generation for LaTeX documents

Web page on CTAN <https://ctan.org/pkg/latex-indexer>

name	latex-indexer
caption	Automate index generation for LaTeX documents
author	Degenhardt, David
license	gpl3 = GNU General Public License, version 3 (free)
version	1.0.0 (2025-06-13)
last changes	2025-06-13
year	2025
description	(no language specified) This is a free, open-source, platform-independent tool designed to automate the generation of indexes for LaTeX documents. It extracts words from <code>.tex</code> files, generates frequency distributions using PGFplots , allows users to select and tag terms (including variants and sub-variants), and compiles the indexed document with MakeIndex . Released under GPL-3, it saves approximately 80% of indexing time, making document creation more efficient.

documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/indexing/latex-indexer/README.md

version	2024-11-01 PL2
description	(no language specified) This bundle holds optional files that are loaded in certain situations by kernel code (if available). While this code is still in development and the use is experimental, it is stored outside the format so that there can be intermediate releases not affecting the production use of LaTeX. Once the code is finalized and properly tested it will eventually move to the kernel and the corresponding file in this bundle will vanish. Note that none of these files are directly user accessible in documents (i.e., they aren't packages), so the process is transparent to documents already using the new functionality.

3289 latex-make – Easy compiling of complex (and simple) LaTeX documents

Web page on CTAN <https://ctan.org/pkg/latex-make>

name	latex-make
caption	Easy compiling of complex (and simple) LaTeX documents
author	Danjan, Vincent
license	gpl = GNU General Public License (free)
version	2.4.3
description	(no language specified) This package provides several tools that aim to simplify the compilation of LaTeX documents: • LaTeX.mk: a Makefile snippet to help compiling LaTeX documents in DVI, PDF, PS, ... format. Dependencies are automatically tracked: one should be able to compile documents with a one-line Makefile containing 'include LaTeX.mk'. Complex documents (with multiple bibliographies, indexes, glossaries, ...) should be correctly managed. • figlatex.sty: a LaTeX package to easily insert xfig figures (with <code>\includegraphics{file.fig}</code>). It can interact with LaTeX.mk so that the latter automatically invokes transfig if needed. • And various helper tools for LaTeX.mk This package <i>requires</i> GNUMake (≥ 3.81).

caption	A practical guide to LaTeX and Polyglossia for Marathi and other Indian languages
author	Holkar, Rohit Dilip
copyright	Rohit Dilip Holkar (2017)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0
description	(no language specified) The package provides a short guide to LaTeX and specifically to the polyglossia package. This document aims to introduce LaTeX and polyglossia for Indian languages. Though the document often discusses the language Marathi, the discussion applies to other India languages also, with some minute changes which are described in Section 1.2. We assume that the user of this document knows basic (La)TeX or has, at least, tried her hand on it. This document is not very suitable for first time users.

3305 *latex209* – Old, unsupported, LaTeX

Web page on CTAN <https://ctan.org/pkg/latex209>

name *latex209*

caption Old, unsupported, LaTeX

author Lamport, Leslie

license lppl = The LaTeX Project Public License (free)

description (no language specified) The distribution of LaTeX 2.09 was last updated in 1993. A copy is kept for its possible historical interest: it is not recommended for current use—all current distributions provide **LaTeX 2e** (now known simply as ‘LaTeX’. Bug fixes, when they arise, are applied to current LaTeX, not to LaTeX 2.09.

A large number of packages were contributed for use with LaTeX 2.09, and while many have been discarded or converted for use with current LaTeX, a significant number await classification.

3310 latex2man – Translate LaTeX-based manual pages into Unix man format

Web page on CTAN <https://ctan.org/pkg/latex2man>

name	latex2man
caption	Translate LaTeX-based manual pages into Unix man format
author	Vollmer, Jürgen
license	lpl1 = The LaTeX Project Public License 1 (free)
version	1.30 (2026-01-16)
last changes	2026-01-16
year	2026
description	(no language specified) Latex2man is a tool to translate UNIX manual pages written with LaTeX into the troff format understood by the UNIX <code>man(1)</code> command. Alternatively HTML, Texinfo, or LaTeX code can be produced too. Output of parts of the text may be suppressed using the conditional text feature (for this, LaTeX generation may be used). There is a LaTeX package (<code>latex2man.sty</code>) for writing the man page and a Perl script (<code>latex2man</code>) that does the actual translation.

3311 latex2nemeth – Convert LaTeX source to Braille with math in Nemeth

Web page on CTAN <https://ctan.org/pkg/latex2nemeth>

name	Latex2Nemeth
caption	Convert LaTeX source to Braille with math in Nemeth
author	Tsolomitis, Antonis
author	Papasalouros, Andreas
copyright	Andreas Papasalouros, Antonis Tsolomitis (2016-2022)
license	gpl3 = GNU General Public License, version 3 (free)
version	1.1.3
description	(no language specified) After many failed attempts to transcribe real math notes and books to Braille/Nemeth in order to deal with a real situation (blind student in Math Dept.), we decided to develop a new program that follows a direct, from LaTeX to Braille/Nemeth, approach. Our main target was the Greek language which is only Braille level 1, but English at level 1 is supported as well. Simple pictures in PSTricks are also supported in order to produce tactile graphics with specialized equipment. Note that embossing will need LibreOffice and <code>odt2braille</code> as this project does not deal with embossers' drivers. What's new in version 1.1 In this version, the support of the user level commands of the amsmath package was added, as described in its user guide, with the exception of commutative diagrams (amscd package) as well as structures that are irrelevant to visually impaired persons. Also, the Unicode mathematics symbols of the unicode-math package that are represented by the Nemeth code are now supported by latex2nemeth. We would like to acknowledge support by the TUGfund for this project (TUGfund project 33).

version	1.0 (2019-03-02)
last changes	2019-03-02
year	2019
description	(no language specified) This LaTeX package allows you to embed and execute your Wolfram Language (Mathematica) source code in a LaTeX document. When the document is compiled, the computation results will be inserted into the compiled file. In addition to general Wolfram Language computations it is also quite easy to generate plots or animations with this package. Moreover, all the embedded code can be executed either locally (via locally installed Mathematica) or on the cloud (via Wolfram Cloud). The main features of this package are somewhat similar to SageTeX , but here we use Wolfram Language (Mathematica) instead of Sage. The package is heavily inspired by LaTeX-Alpha , which also explains the name "latexalpha2". Unfortunately, LaTeX-Alpha has been down for a while. The objective of <code>latexalpha2</code> is to replace LaTeX-Alpha and at the same time provide various new features.

3319 *latexbangla* – Enhanced LaTeX integration for Bangla

Web page on CTAN <https://ctan.org/pkg/latexbangla>

name latexbangla

caption Enhanced LaTeX integration for Bangla

author Hasan, Adib

copyright Adib Hasan (2016)

license lpl1.3 = The LaTeX Project Public License 1.3 (free)

version 0.2 (2016-10-31)

last changes 2016-10-31

year 2016

description (no language specified) This package simplifies the process of writing Bangla in LaTeX and addresses most of the associated typesetting issues.

Notable features:

- Automated transition from Bangla to English and vice versa.
- Patch for the unproportionate whitespace issue in popular Bangla fonts.
- Full support for all the common commands and environments.
- Bangla numbering for page, section, chapter, footnotes etc. (extending polyglossia's support).
- New theorem, problems, example, solution and other environments, all of which are in Bangla.

3332 *latexdraw* – CAD oriented drawing program

version	(2026-01-02)
last changes	2026-01-02
year	2026
description	(no language specified) Latexdiff is a Perl script for visual mark up and revision of significant differences between two LaTeX files. Various options are available for visual markup using standard LaTeX packages such as color . Changes not directly affecting visible text, for example in formatting commands, are still marked in the LaTeX source. A rudimentary revision facility is provided by another Perl script, latexrevise, which accepts or rejects all changes. Manual editing of the difference file can be used to override this default behaviour and accept or reject selected changes only.
documentation	(no language specified) <i>Package manual</i> : https://ctan.org/tex-archive/support/latexdiff/doc/latexdiff-man.pdf

3339 latexmk – Fully automated LaTeX document generation

Web page on CTAN <https://ctan.org/pkg/latexmk>

name	latexmk
caption	Fully automated LaTeX document generation
author	Collins, John
author	McLean, Evan
author	Musliner, David J.
copyright	John Collins (1998-2025)
license	gpl2 = GNU General Public License, version 2 (free)
version	4.88 (2026-03-09)
last changes	2026-03-09
year	2026

description	(no language specified) Latexmk completely automates the process of generating a LaTeX document. Given the source files for a document, latexmk issues the appropriate sequence of commands to generate a .dvi , .ps , .pdf or hardcopy version of the document. An important feature is the "preview continuous mode", where the script watches all of the source files (primary file and included TeX and graphics files), and reruns LaTeX, etc., whenever a source file has changed. Thus a previewer can offer a display of the document's latest state.
documentation	(no language specified) <i>Manual page, PDF</i> : https://ctan.org/tex-archive/support/latexmk/latexmk.pdf

3341 *latexmp* – Interface for LaTeX-based typesetting in MetaPost

Web page on CTAN	https://ctan.org/pkg/latexmp
name	latexMP
caption	Interface for LaTeX-based typesetting in MetaPost
author	Morawski, Jens-Uwe
license	pd = Public Domain Software (free)
version	1.2.1
description	(no language specified) The MetaPost package latexMP implements a user-friendly interface to access LaTeX-based typesetting capabilities in MetaPost. The text to be typeset is given as string. This allows even dynamic text elements, for example counters, to be used in labels. Compared to other implementations it is much more flexible, since it can be used as direct replacement for <code>btex.etex</code> , and much faster, compared for example to the solution provided by <code>tex.mp</code> .
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/graphics/metapost/contrib/macros/latexmp/README
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/graphics/metapost/contrib/macros/latexmp/doc/latexmp.pdf

3354 *latino-sine-flexione* – LaTeX support for documents written in Peano’s InterlinguaWeb page on CTAN <https://ctan.org/pkg/latino-sine-flexione>

name	latino-sine-flexione
caption	LaTeX support for documents written in Peano’s Interlingua
author	Leve, Victore
license	pd = Public Domain Software (free)
version	1.2
description	(no language specified) Latino sine Flexione (or Interlingua) is a language constructed by Giuseppe Peano at the beginning of the last century. This simplified Latin is designed to be an instrument for international cooperation, especially in the academic sphere. (Note that this “Interlingua” is different from the “Interlingua” that was created a few decades after Peano’s work and which is supported by babel-interlingua !) This package provides the necessary translations to use the language within a LaTeX document. It also imports fontenc in order to be able to use ligatures and quotation marks. Finally, it offers a text in Interlingua that can be used as a dummy text: <i>Fundamento de intelligentia</i> . This article by H. Bijlsma was first published in <i>Schola et Vita</i> Anno I (1926).

version	1.0 (2018-01-21)
last changes	2018-01-21
year	2018

description	(no language specified) This little package serves the purpose of providing a uniform method to use lowercased small capitals and spaced lowercased small capitals. It relies on the <code>iftex</code> , <code>textcase</code> , and <code>microtype</code> packages and comes with four new user macros: <code>\textlcc</code> , the main feature: lowercased small capitals; <code>\spacedcaps</code> , a prefix to small capitals text commands to slightly increase their spacing; <code>\textslcc</code> and <code>\textssc</code> , which are shortcuts for <code>\spacedcaps\textlcc</code> and <code>\spacedcaps\textsc</code> (accordingly).

3363 *lcdf-typetools* – A bundle of outline font manipulation tools

Web page on CTAN <https://ctan.org/pkg/lcdf-typetools>

name	<code>LCDF-typetools</code>
caption	A bundle of outline font manipulation tools
author	Kohler, Eddie
copyright	Eddie Kohler (1997-2006)
license	<code>gpl</code> = GNU General Public License (free)
description	(no language specified) This bundle of tools comprises: • <code>Cfftot1</code>, which translates a Compact Font Format (CFF) font, or a PostScript-flavored OpenType font, into PostScript Type 1 format. It correctly handles subroutines and hints; • <code>Mmafm</code> and <code>mmpfb</code>, which create instances of multiple-master fonts (<code>mmafm</code> and <code>mmpfb</code> were previously distributed in their own package, <code>mminstance</code>); • <code>Otfinfo</code>, which reports information about OpenType fonts, such as the features they support and the contents of their ‘size’ optical size features; • <code>Otfotfm</code>, which creates TeX font metrics and encodings that correspond to a PostScript-flavored OpenType font. It will interpret glyph positionings, substitutions, and ligatures as far as it is able. You can say which OpenType features should be activated;

- T1dotlessj, creates a Type 1 font whose only character is a dotless j matching the input font’s design;
- T1lint, which checks a Type 1 font for correctness;
- T1reencode, which replaces a font’s internal encoding with one you specify; and
- T1testpage, which creates a PostScript proof for a Type 1 font. It is preliminary software.

3372 *lebhart* – Write your articles in a colorful way

Web page on CTAN <https://ctan.org/pkg/lebhart>

name	lebhart
caption	Write your articles in a colorful way
author	XU, Jinwen
copyright	Jinwen XU (2021-2024)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	(2024-02-20)
last changes	2024-02-20

year	2024
description	(no language specified) This package provides a LaTeX class for typesetting articles with a colorful design. Currently, it has native support for Chinese (simplified and traditional), English, French, German, Italian, Japanese, Portuguese (European and Brazilian), Russian and Spanish typesetting. It compiles with either XeLaTeX or LuaLaTeX. This is part of the colorist class series and depends on <code>colorist.sty</code> from the colorist package. The package name "lebhart" is taken from the German word "lebhaft" ("vivid"), combined with the first three letters of "Artikel" ("article").

3374 *lecturer* – On-screen presentations for (almost) all formats

Web page on CTAN <https://ctan.org/pkg/lecturer>

name	<code>lecturer</code>
caption	On-screen presentations for (almost) all formats
author	Isambert, Paul
license	lppl = The LaTeX Project Public License (free)
version	(2011-09-11)
last changes	2011-09-11
year	2011
description	(no language specified) The package creates slides for on-screen presentations based on PDF features without manipulating TeX's typesetting process. The presentation flow relies on PDF's abilities to display content step by step.

Features include:

- Free positioning of anything anywhere in painted areas on the slide, as well as in the main textblock;
- Numerous attributes to control the layout and the presentation flow, from TeX's primitive dimensions to the visibility of steps;
- Feature inheritance from global to local settings, with intermediate types;
- Basic drawing facilities to produce symbols, e.g., for list items or buttons;
- Colours, transparency, shades, and pictures;
- Navigation with links, pop-up menus, and customizable bookmarks;
- Easy switch between presentation and handout; and
- PDF transitions.

Besides the traditional documentation, the distribution includes visual documentation and six demo presentations ranging from geometric abstraction to classic style to silly video game.

Lecturer is designed to work with all formats, but presently fails with ConTeXt MkIV (because of clashes in management of PDF objects, probably), works only with pdfTeX and LuaTeX for the time being, and requires `texapi` and `yax` , both v.1.02.

3383 leilletter – A letter class for Leiden University

Web page on CTAN <https://ctan.org/pkg/leilletter>

name LEIletter

caption A letter class for Leiden University

author Kreutzer, Michiel

copyright Michiel Kreutzer (2009)

license cc-by-sa-3 = CC BY-SA 3.0 (free)

license lpl1.3c = The LaTeX Project Public License 1.3c (free)

version 1.3 (2020-02-09)

last changes 2020-02-09

year 2020

description (no language specified) This package is a LaTeX implementation of the business letter formatting that is used at Leiden University, using the institute graphic identity as specified on www.leidenuniv.nl .

The LEIletter class is an extension of the standard **KOMA-script** letter class **scrlltr2** . It is intended to be used for writing business letters. It is compliant to the house style and allows for using windowed envelopes of the DL format, with right-aligned window.

The class requires and uses the following packages that are part of most modern LaTeX distributions: **graphicx** , **ifthen** , **array** , **babel** , **ragged2e** , **hyperref** , **textcase** , **microtype** , **scrlayer-scrpage** , **geometry** , **setspace** , **lipsum** , and **minionpro** .

The package relies on the Minion Pro fonts from Adobe, which are commercial but easily available.

version	1.0.3 (2025-09-15)
last changes	2025-09-15
year	2025
description	(no language specified) A simple LaTeX document class to create folded leaflets with the following key features: • The document layout consists of a specific number of pages that can have varying widths and are placed next to each other. Each page contains one frame to contain typeset material. • Material is typeset in boxes, and boxes are positioned in columns which in turn are placed into the frames on the pages of the document. • Columns are predefined and then placed into the frame of a page in the document layout. This way, columns can be used on pages with varying widths. • Boxes can have padding (including bleed) and a background and are positioned inside a column.

year	2026
description	(no language specified) The French TeX User Group GUTenberg has been publishing “The GUTenberg Letter”, its irregular newsletter, since February 1993. For this purpose, a dedicated, in-house (La)TeX class was gradually created but, depending on new needs and on the people who were publishing the Newsletter, its development was somewhat erratic; in particular, it would not have been possible to publish its code as it was. In addition, its documentation was non-existent.

The Board of Directors of the association, elected in November 2020, wished to provide a better structured, more perennial and documented class, able to be published on the CTAN. This is now done with the present ‘letgut’ class.

French

L’association GUTenberg publie “La Lettre GUTenberg”, son bulletin irrégulomestriel, depuis février 1993.

Pour ce faire, une classe (La)TeX dédiée, maison, a peu à peu vu le jour mais, au gré des nouveaux besoins et des personnes qui ont assuré la publication de la Lettre, son développement a été quelque peu erratique ; il n’aurait notamment pas été possible de publier son code en l’état. En outre, sa documentation était inexistante.

Le Conseil d’Administration de l’association, élu en novembre 2020, a souhaité fournir une classe mieux structurée, davantage pérenne et documentée, à même d’être publiée sur le CTAN. C’est désormais chose faite avec la présente classe `letgut`.

3407 *l_{fb}* – A Greek font with normal and bold variants

Web page on CTAN <https://ctan.org/pkg/l_{fb}>

name	<code>l_{fb}</code>
caption	A Greek font with normal and bold variants
author	Field, Laurie
license	lppl = The LaTeX Project Public License (free)
version	1.0
description	(no language specified) This is a Greek font written in Metafont, with inspiration from the Bodoni typefaces in old books. It is stylistically a little more exotic than the standard textbook Greek fonts, particularly in glyphs like the lowercase rho and kappa. It aims for a rather calligraphic feel, but seems to blend well with Computer Modern. There is a ligature scheme which automatically inserts the breathings required for ancient texts, making the input text more readable than in some schemes.

documentation	(Greek) <i>Example of text in lfb</i> : https://ctan.org/tex-archive/fonts/greek/lfb/example.pdf

keyword	obsolete (package declared obsolete)
keyword	inputenc (input encoding support for TeX engines)
keyword	greek (support for typesetting Greek)
language(s)	no language specified
last access	2025-02-07

3416 *lh* – Cyrillic fonts that support LaTeX standard encodings

Web page on CTAN <https://ctan.org/pkg/lh>

name	<i>lh</i>
caption	Cyrillic fonts that support LaTeX standard encodings
author	Khodulev, Andrey
author	Lapko, Olga
author	Berdnikov, Alexander

author	Volovich, Vladimir
license	lppl = The LaTeX Project Public License (free)
version	3.5g
description	(no language specified) The LH fonts address the problem of the wide variety of alphabets that are written with Cyrillic-style characters. The fonts are the original basis of the set of T2* and X2 encodings that are now used when LaTeX users need to write in Cyrillic languages. Macro support in standard LaTeX encodings is offered through the latex-cyrillic and t2 bundles, and the package itself offers support for other (more traditional) encodings. The fonts, in the standard T2* and X2 encodings are available in Adobe Type 1 format, in the CM-Super family of fonts. The package also offers its own LaTeX support for OT2 encoded fonts, CM bright shaped fonts and Concrete shaped fonts .
documentation	(no language specified) <i>Readme</i>: https://ctan.org/tex-archive/fonts/cyrillic/lh/README
on CTAN	https://ctan.org/tex-archive/fonts/cyrillic/lh
on MikTeX	lh

3420 *libertine-legacy* – Linux Libertine fonts for (La)TeX and pdf(La)TeX users

Web page on CTAN <https://ctan.org/pkg/libertine-legacy>

name	libertine-legacy
caption	Linux Libertine fonts for (La)TeX and pdf(La)TeX users
author	Niedermair, Michael
author	Tennent, Bob
license	gpl = GNU General Public License (free)
version	(2011-12-30)
last changes	2011-12-30
year	2011
description	(no language specified) The package provides support for (traditional-)TeX-based users of the libertine bundle, who were left isolated when that bundle switched to OTF-only form on 2012-12-11 (thus only, now, supporting XeTeX and LuaTeX users). To prevent confusion with libertine ‘original’, there are no OTF fonts in the present package. Note that the package is now deemed obsolete; the unified libertine package serves its purpose.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/obsolete/fonts/libertine-legacy/README
on CTAN	https://ctan.org/tex-archive/obsolete/fonts/libertine-legacy
keyword	font (fonts themselves)
keyword	font-suppl (metrics, macro incantations and other font support)
keyword	font-type1 (font available in Adobe Type 1 format)
language(s)	no language specified
last access	2025-02-07

3421 *libertine-type1* – (pdf)LaTeX support for the Libertine family of fonts

Web page on CTAN <https://ctan.org/pkg/libertine-type1>

name	<code>libertine-type1</code>
caption	(pdf)LaTeX support for the Libertine family of fonts
author	Tennent, Bob
license	lppl = The LaTeX Project Public License (free)
version	5.3.0
description	(no language specified) The package (and the companion biolinum-type1 package of sans serif fonts) replace the libertine-legacy bundle. However, the packages do not provide the range of font shapes available with libertine-legacy . The support files for the package were generated using the autoinst script.
documentation	(no language specified) <i>Samples</i> : https://ctan.org/tex-archive/obsolete/fonts/libertine-type1/doc/samples.pdf

license	ofl = The SIL Open Font License (free)
version	2.0.6 (2024-06-03)
last changes	2024-06-03
year	2024
description	(no language specified) The package provides a Type1 version of Libertinus Math, with a number of additions and changes, plus LaTeX support files that allow it to serve as a math accompaniment to Libertine under LaTeX. In addition, with option <code>sansmath</code>, it can function as a standalone math font with sans serif Roman and Greek letters.

3429 libgreek – Greek letters in math mode from Libertinus or Linux Libertine/Biolinum

Web page on CTAN <https://ctan.org/pkg/libgreek>

name	<code>libgreek</code>
caption	Greek letters in math mode from Libertinus or Linux Libertine/Biolinum
author	Burnol, Jean-François
copyright	Jean-François Burnol (2011-2012, 2022)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1 (2022-11-11)
last changes	2022-11-11
year	2022
description	(no language specified) This package allows LaTeX users (especially if using traditional LaTeX/pdfLaTeX) to set the Greek letters in math mode using the glyphs from the Libertinus Serif or Sans font via the font support files provided by Bob Tennent’s libertinus-type1 package. All Greek letters are defined both in <code>\dotsup</code> and <code>\dotsit</code> variants. The style (ISO, TeX, or French i.e. upright) can be modified midway in the document. A “legacy” mode uses font support from the (obsolete) libertine-legacy package which maps to the Linux Libertine or Biolinum fonts.

This package is for users who only want to customize Greek letters in math mode.

3430 *librarian* – Tools to create bibliographies in TeX

Web page on CTAN	https://ctan.org/pkg/librarian
name	<code>librarian</code>
caption	Tools to create bibliographies in TeX
author	Isambert, Paul
license	lpl = The LaTeX Project Public License (free)
version	1.0
description	(no language specified) The package extracts information in bib files, makes it available in the current document, and sorts lists of entries according to that information and the user's specifications. Citation and bibliography styles can then be written directly in TeX, without any use of BibTeX. Creating references thus depends entirely on the user's skill in TeX. The package works with all formats that use plain TeX's basic syntactic sugar; the distribution includes a third-party file for ConTeXt and a style file for LaTeX. As an example of use, an Author (Year) style is given in a separate file and explained in the documentation.

3437 *liederbuch* – A LaTeX package for storing songs or other content, and repeated reuse in documents

Web page on CTAN <https://ctan.org/pkg/liederbuch>

name	liederbuch
caption	A LaTeX package for storing songs or other content, and repeated reuse in documents
author	Ruprecht, Gabriel
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.1.0 (2025-01-20)
last changes	2025-01-20
year	2025
description	(no language specified) This package is meant for content which you reuse regularly, like songs in small booklets. For example the booklets used at church, weddings or similar events. It has two major parts: 1. You typeset your content once (most likely a song), garnish it with some meta data and put it into a sty-file. From there you can insert this content into your document with one single line. The inserted content can have header and footer that use the meta data (i.e. title, composer, lyricist). 2. Inside these content fragments, you can use the <code>\notenzeile</code> (stave line) command to combine an image of a stave line with song lyrics. If correctly used, the lyrics are placed correctly below the notes and need most often no or only minor adjustments. With that you can combine any stave image with LaTeX fonts. You can find resources and inspiration in a demo project.

Alias	llmk
name	Light LaTeX Make
caption	llmk: A build tool for LaTeX documents
author	Asakura, Takuto
copyright	Takuto Asakura (2018-2023)
license	mit = MIT License (free)
version	1.2.0

description	(no language specified) Light LaTeX Make (llmk) is yet another build tool specific for LaTeX documents. Its aim is to provide a simple way to specify a workflow of processing LaTeX documents and encourage people to always explicitly show the right workflow for each document. The main features of <code>llmk</code> are all about the above purpose. First, you can describe the workflows either in an external file <code>llmk.toml</code> or in a LaTeX document source in the form of magic comments. Further, multiple magic comment formats can be used. Second, it is fully cross-platform. The only requirement of the program is the <code>texlua</code> command; <code>llmk</code> provides a uniform way to describe the workflows available for nearly all TeX environments. Third, it behaves exactly the same in any environment. At this point, <code>llmk</code> intentionally does not provide any method for user configuration. Therefore one can guarantee that for a LaTeX document with an <code>llmk</code> setup, the process of typesetting the document will be reproduced in any TeX environment with the program.

3444 *limap* – Typeset maps and blocks according to the Information Mapping® method

Web page on CTAN <https://ctan.org/pkg/limap>

name	limap
caption	Typeset maps and blocks according to the Information Mapping® method
author	Neugebauer, Gerd
copyright	Gerd Neugebauer (1999-2016)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.2
description	(no language specified) The Information Mapping® method provides a methodology for structuring and presenting information. It claims to be useful for readers who are more concerned about finding the right information than reading the document as a whole. Thus short, highly structured, and context free pieces of information are used. A LaTeX style and a LaTeX class are provided. The style contains definitions to typeset maps and blocks according to the Information Mapping® method. The class provides all definitions to typeset a whole document.

3446 linearA – Linear A script fonts

Web page on CTAN <https://ctan.org/pkg/linearA>

name linearA
 caption Linear A script fonts
 author Syropoulos, Apostolos
 copyright Apostolos Syropoulos (2006)
 license lppl = The LaTeX Project Public License (free)
 description (no language specified) The linearA package provides a simple interface to two fonts which include all known symbols, simple and complex, of the Linear A script. This way one can easily replicate Linear A "texts" using modern typographic technology. Note that the Linear A script has not been deciphered yet and probably never will be deciphered.
 documentation (no language specified) *Readme*: <https://ctan.org/tex-archive/fonts/archaic/linearA/README>

3449 linebreaker – Prevent overflow boxes with LuaLaTeXWeb page on CTAN <https://ctan.org/pkg/linebreaker>

name	linebreaker
caption	Prevent overflow boxes with LuaLaTeX
author	Hoftich, Michal
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.1c (2023-03-21)
last changes	2023-03-21
year	2023
description	(no language specified) This package tries to prevent overflow lines in paragraphs or boxes. It changes LuaTeX's <code>\linebreak</code> callback and re-typesets the paragraph with increased values of <code>\tolerance</code> and <code>\emergencystretch</code> until the overflow no longer happens. If that doesn't help, it chooses the solution with the lowest badness.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/luatex/latex/linebreaker/README.md

3450 *linegoal* – A “dimen” that returns the space left on the line

Web page on CTAN <https://ctan.org/pkg/linegoal>

name	<code>linegoal</code>
caption	A “dimen” that returns the space left on the line
author	Chervet, Florent
copyright	Florent Chervet (2010)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.9
description	(no language specified) The <i>linegoal</i> package provides a macro <code>\linegoal</code> to be used with <code>\setlength</code>: <pre>\setlength< some dimen >\linegoal</pre> will set <code>< some dimen ></code> to the horizontal length of the remainder of the line. This is achieved using the <code>\pdfsavepos</code> primitive of pdfTeX, through the zref-savepos package. Example: <pre>Some text: \begin{tabularx}{\linegoal{11X}} \hline one & two \\ three & four \\ \hline \end{tabularx}</pre> will position the table after the initial text, and make the table fill the rest of the line.

description	(no language specified) This is an experimental bundle of packages that provide enhanced support for typesetting in linguistics. It can be used as a single package, or the packages can be loaded independently for separate features. Currently, it provides the following packages: 1. LinguisTiX-base: A base package used by other LinguisTiX siblings 2. LinguisTiX-fixpex: Solves the compatibility bug between expex and unicode-math 3. LinguisTiX-fonts: General text in the New Computer Modern font family 4. LinguisTiX-ipa: IPA text in the New Computer Modern font family 5. LinguisTiX-glossing: Accessible interlinear glossing 6. LinguisTiX-leipzig: Leipzig-style glossing with tagging 7. LinguisTiX-languages: Support for modern multilingual typesetting 8. LinguisTiX-logos: For printing the logos of the LinguisTiX bundle 9. LinguisTiX-nfss: Extra control over NFSS

3458 *linkedthm* – Hyperlinked theorem–proof environments for LaTeX

Web page on CTAN <https://ctan.org/pkg/linkedthm>

name	linkedthm
caption	Hyperlinked theorem–proof environments for LaTeX
author	Ortega Andrés, Luis Antonio
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0 (2025-07-21)
last changes	2025-07-21
year	2025
description	(no language specified) This package provides lightweight infrastructure for bidirectional linking between theorem-like environments and their corresponding proofs. It automatically adds a [Proof] hyperlink at the end of a theorem and a restated version with a [Return] link inside the proof. You can declare any number of custom linked environments (e.g., <code>linkeddefinition</code>, <code>linkedexample</code>) using <code>\DeclareLinkedTheorem</code>, and base them on any amsthm-compatible environment. This is useful for mathematical writing and documentation, where proof navigation is essential. The package uses amsthm, xparse, and hyperref, and is compatible with all standard LaTeX engines.
documentation	(no language specified) <i>Example of use:</i> https://ctan.org/tex-archive/macros/latex/contrib/linkedthm/linkedthm-example.pdf

3462 lion-msc – LaTeX class for B.Sc. and M.Sc. reports at Leiden Institute of Physics (LION)

Web page on CTAN <https://ctan.org/pkg/lion-msc>

name	lion-msc
caption	LaTeX class for B.Sc. and M.Sc. reports at Leiden Institute of Physics (LION)
author	de Dood, Michiel
copyright	Michiel de Dood (2014-2020)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.30 (2020-06-04)

last changes	2020-06-04
year	2020
description	(no language specified) LaTeX class for B.Sc. and M.Sc. reports at Leiden Institute of Physics (LION). The purpose of this class is twofold: It creates a uniform layout of the student theses from our department. More importantly it contains several fields on the front-page that the user needs to fill that are used in the university administration (name, student number and name of supervisor). Students are free to change the layout of the text but should leave the title page as it is.

3470 listings – Typeset source code listings using LaTeX

Web page on CTAN <https://ctan.org/pkg/listings>

name	listings
caption	Typeset source code listings using LaTeX
author	Heinz, Carsten
author	Moses, Brooks
author	Hoffmann, Jobst
copyright	Carsten Heinz (1996-2004)
copyright	Jobst Hoffmann (2013-2025)
copyright	Brooks Moses (2006-2007)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.11a
description	(no language specified) The package enables the user to typeset programs (programming code) within LaTeX; the source code is read directly by TeX—no front-end processor is needed. Keywords, comments and strings can be typeset using different styles (default is bold for keywords, italic for comments and no special style for strings). Support for hyperref is provided. To use, <code>\usepackage{listings}</code>, identify the language of the object to typeset, using a construct like: <code>\lstset{language=Python}</code>, then use environment <code>lstlisting</code> for inline code. External files may be formatted using <code>\lstinputlisting</code> to process a given file in the form appropriate for the current language. Short (in-line) listings are also available, using either <code>\lstinline ... </code> or <code> ... </code> (after defining the <code> </code> token with the <code>\lstMakeShortInline</code> command).
documentation	(no language specified) <i>Package Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/listings/README

3476 *listofitems* – Grab items in lists using user-specified sep char

Web page on CTAN <https://ctan.org/pkg/listofitems>

name	listofitems
caption	Grab items in lists using user-specified sep char
author	Tellechea, Christian
copyright	Christian Tellechea (2016-2024)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.65 (2024-03-09)
last changes	2024-03-09
year	2024

description	(no language specified) This simple package is designed to read a list of items whose parsing character may be selected by the user. Once the list is read, its items are stored in a structure that behaves as a dimensioned array. As such, it becomes very easy to access an item in the list by its number. For example, if the list is stored in the macro <code>\foo</code>, the item #3 is designated by <code>\foo[3]</code>. A component may, in turn, be a list with a parsing delimiter different from the parent list, paving the way for nesting and employing a syntax reminiscent of an array of several dimensions of the type <code>\foo[3,2]</code> to access the item #2 of the list contained within the item #3 of the top-tier list.

3477 *listofsymbols* – Create and manipulate lists of symbols

Web page on CTAN	https://ctan.org/pkg/listofsymbols
name	<code>listofsymbols</code>
caption	Create and manipulate lists of symbols
author	Spreng, Stefan
license	lppl = The LaTeX Project Public License (free)
version	0.2

description	(no language specified) Listofsymbols provides commands to automatically create a list of symbols (also called notation or nomenclature), and to handle symbols logically, i.e. define a macro that is expanded to the desired output and use the macro in the text rather than 'hardcoding' the output into the text. This helps to ensure consistency throughout the text, especially if there is a chance that symbols will be changed at some stage. The package is more or less a combination of what the packages nomencl and formula do. The concept of creating the list of symbols, though, is different from the way nomencl.sty does it.

3480 *literate* – A *literate* programming system, not tied to any language

Web page on CTAN <https://ctan.org/pkg/literate>

name	<code>literate</code>
caption	A <i>literate</i> programming system, not tied to any language
author	Schrod, Joachim
copyright	Joachim Schrod (1988)
license	pd = Public Domain Software (free)
description	(no language specified) The system consists of two parts: a processor, <code>makeprog</code> , which extracts program code from a <i>literate</i> source file, and a set of macros that will typeset the source file (possibly after application, by <code>makeprog</code> , of a change file). <code>Makeprog</code> is distributed as a web source file.
documentation	(no language specified) <i>Email from original distribution</i> : https://ctan.org/tex-archive/macros/plain/contrib/literate/origin

last changes	2020-09-19
year	2020
description	(no language specified) This package provides LaTeX, pdfLaTeX, XeLaTeX and LuaLaTeX support for the Lobster Two family of fonts, designed by Pablo Impallari. This is a family of script fonts with many ligatures and terminal forms; for the best results, use XeLaTeX or LuaLaTeX. There are two weights and italic variants for both.

3505 *logfilter* – Choose what you want to see of a (La)TeX log

Web page on CTAN	https://ctan.org/pkg/logfilter
name	<code>logfilter</code>
caption	Choose what you want to see of a (La)TeX log
author	Graversen, Kasper B.
license	other-free = Free license not otherwise listed (free)
description	(no language specified) LogFilter is a program that monitors the logfiles (La)TeX produces and presents them in an interactive environment to the user. The program lets the user choose which errors he cares to see. Furthermore LogFilter integrates with your editor so that when pressing an error, your editor will open the TeX file and jump to the according line. Some errors do not contain linenumbers in which case the program only opens the file where the error has occurred.

3515 logreq – Support for automation of the LaTeX workflowWeb page on CTAN <https://ctan.org/pkg/logreq>

name	logreq
caption	Support for automation of the LaTeX workflow
author	Lehman, Philipp
copyright	Philipp Lehman (2010)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0
description	(no language specified) The package helps to automate a typical LaTeX workflow that involves running LaTeX several times, running tools such as BibTeX or makeindex, and so on. It will log requests like "please rerun LaTeX" or "please run BibTeX on file X" to an external XML file which lists all open tasks in a machine-readable format. Compiler scripts and integrated LaTeX editing environments may parse this file to determine the next steps in the workflow in a way that is more efficient than parsing the main log file. In sum, the package will do two things: • enable package authors to use LaTeX commands to issue requests, • collect all requests from all packages and write them to an external XML file at the end of the document.

name	lolliipop
caption	TeX made easy
author	Khalighi, Vafa
author	Eijkhout, Victor
author	bidi-tex GitHub Organisation
copyright	Vafa Khalighi (2014-2016)

copyright	Victor Eijkhout (1992, 1993)
license	gpl3 = GNU General Public License, version 3 (free)
version	1.07
description	(no language specified) Lollipop is "TeX made easy" — it is a macro package that functions as a toolbox for writing TeX macros. Its main aim is to make macro writing so easy that implementing a fully new layout in TeX would become a matter of less than an hour for an average document. The aim is that such a task could be accomplished by someone with only a very basic training in TeX programming. Thus, Lollipop aims to make structured text formatting available in environments where typical users would switch to WYSIWYG packages for the freedom that such a mechanism offers. In addition, development of support for Lollipop documents written in RTL languages (such as Persian) is underway.

3519 *longdivision* – Typesets long divisionWeb page on CTAN <https://ctan.org/pkg/longdivision>

name	<code>longdivision</code>
caption	Typesets long division
author	Chatham, Hood
license	lppl = The LaTeX Project Public License (free)
version	1.2.2 (2023-10-21)
last changes	2023-10-21
year	2023

description	(no language specified) This package executes the long division algorithm and typesets the solutions. The dividend must be a positive decimal number and the divisor must be a positive integer. Repeating decimals is handled correctly, putting a bar over the repeated part of the decimal. Dividends up to 20 digits long are handled gracefully (though the typeset result will take up about a page), and dividends between 20 and 60 digits long slightly less gracefully. The package defines two macros, <code>\longdivision</code> and <code>\intlonddivision</code>. Each takes two arguments, a dividend and a divisor. <code>\longdivision</code> keeps dividing until the remainder is zero, or it encounters a repeated remainder. <code>\intlonddivision</code> stops when the dividend stops (though the dividend doesn't have to be an integer). This package depends on the <code>xparse</code> package from the <code>l3packages</code> bundle.

3522 *longmath* – Nested delimiter groups extending over multiple array cells or linesWeb page on CTAN <https://ctan.org/pkg/longmath>

name	<code>longmath</code>
caption	Nested delimiter groups extending over multiple array cells or lines
author	Matschull, Hans-Jürgen
copyright	Hans-Jürgen Matschull (2024)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0 (2024-07-04)
last changes	2024-07-04
year	2024
description	(no language specified) This package provides yet another solution to some well known typesetting problems solved in a variety of ways: multi line formulas with paired and nested delimiters. It tackles the problem at the Lua level, which has some advantages over solutions implemented in TeX. In particular, the TeX code need not be executed multiple times, and there is no interference between TeX grouping and the nesting of delimiter groups. As a byproduct, delimiters can be scaled in various ways, inner delimiters come in different flavours like relational and binary operators, punctuation symbols etc., and outer delimiters can be selected automatically according to the nesting level. Last but not least, delimiter groups can even extend across several array cells or across the whole document. A special environment is provided as well, which allows multi line expressions to be placed inside a displayed equation and make TeX do the line splitting and alignment.

3524 *longtable* – Allow tables to flow over page boundaries

Web page on CTAN <https://ctan.org/pkg/longtable>

name	<code>longtable</code>
caption	Allow tables to flow over page boundaries
author	Kastrup, David
author	The LaTeX Project Team
author	Carlisle, David
copyright	The LaTeX3 Project et al. (1993-2023)
copyright	David Carlisle (1990-2020)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	4.22 (2024-10-27)
last changes	2024-10-27
year	2024
description	(no language specified) Longtable allows you to write tables that continue to the next page. You can write captions within the table (typically at the start of the table), and headers and trailers for pages of table. Longtable arranges that the columns on successive pages have the same widths. This last contrasts with the superficially similar supertabular package. Longtable (unlike supertabular) modifies the output routine, and consequently won't work in a multicolumn environment (or in other circumstances where the output routine has been critically altered); it also fails in twocolumn pages. This package is part of the latex-tools bundle in the LaTeX required distribution.

3532 lparse – Parse macro arguments with Lua using xparse-like specificationWeb page on CTAN <https://ctan.org/pkg/lparse>

name	<code>lparse</code>
caption	Parse macro arguments with Lua using xparse-like specification
author	Friedrich, Josef
copyright	Josef Friedrich (2023-2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.3.0 (2025-07-02)
last changes	2025-07-02
year	2025
description	(no language specified) The name <code>lparse</code> is derived from <code>xparse</code>. The ‘x’ has been replaced by an ‘l’ because this package only works with LuaTeX. ‘l’ stands for “Lua”. Just as with <code>xparse</code>, it is possible to use a special syntax consisting of single letters to express the arguments of a macro. However, <code>lparse</code> is able to read arguments regardless of the macro system used — whether LaTeX, or ConTeXt, or even plain TeX. Of course, LuaTeX must always be used as the engine.

3541 *lscape* – Place selected parts of a document in landscape

Web page on CTAN <https://ctan.org/pkg/lscape>

name	<code>lscape</code>
caption	Place selected parts of a document in landscape
author	The LaTeX Project Team
author	Carlisle, David
copyright	David Carlisle, LaTeX3 Project (2000-2021)
copyright	David Carlisle (1994, 1999-2000)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	3.02 (2020-05-28)
last changes	2020-05-28
year	2020
description	(no language specified) Modifies the margins and rotates the page contents but not the page number. Useful, for example, with large multipage tables, as it is compatible with longtable and supertabular . Note that the package makes no special provision for PDF output, where in principle a single page can be shown at full landscape width; such an effect may be achieved using the pdfscape package instead. The package is part of the latex-graphics bundle, which is one of the collections in the LaTeX ‘required’ set of packages.

3543 lshort – A short introduction to LaTeX 2eWeb page on CTAN <https://ctan.org/pkg/lshort>

name	lshort
caption	A short introduction to LaTeX 2e
author	Oetiker, Tobias
license	collection = collection
description	(no language specified) Lshort started as a translation and rationalisation of a ground-breaking German-language introduction to LaTeX. It has since taken on a momentum of its own, and has itself been translated into a number of languages. Thus we have introductory text available to a wide proportion of the user community. The archive holds versions in Bulgarian , Chinese , Dutch , English , Finnish , French , German , Italian , Japanese , Korean , Mongolian , Persian , Polish , Portuguese , Brazilian Portuguese , Russian , Slovak , Slovenian , Spanish , Thai , Turkish , Ukrainian and Vietnamese .

Web page on CTAN <https://ctan.org/pkg/ltb2bib>

name	ltb2bib
caption	Converts amsrefs' .ltb bibliographical databases to BibTeX format
author	Bartholdi, Laurent
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.01

3579 *ltcaption* – Fix some caption problems in longtables

description	(no language specified) This package implements a LaTeX command that converts an amsrefs bibliographical database (<code>.ltb</code>) to a BibTeX bibliographical database (<code>.bib</code>). ltb2bib is the reverse of the "amsxport" option in amsrefs. Typical uses are: • produce bib entries for some publishers which don't accept amsrefs (Taylor & Francis, for example); • import an ltb database in a database management program, e.g. for sorting; • access one's ltb database within emacs's RefTeX mode.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/biblio/bibtex/utils/ltb2bib/README

3580 ltmermaid – Embed Mermaid diagrams in LaTeX

Web page on CTAN <https://ctan.org/pkg/ltmermaid>

name	ltmermaid
caption	Embed Mermaid diagrams in LaTeX
author	Ando, Ryoya
copyright	Ryoya Ando (2026)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0a (2026-04-20)
last changes	2026-04-20
year	2026

description	(no language specified) Embed Mermaid diagrams in LaTeX. Diagram sources are written to disk, and the Mermaid CLI (mmdc) renders vector PDFs, which are then included using <code>\includegraphics</code>. <code>mermaid.sty</code> is the implementation to be used with pdfLaTeX/XeLaTeX/upLaTeX/LuaLaTeX, etc. It invokes the Mermaid CLI via the <code>shellesc</code> package (or directly via <code>\write18</code>). No Lua interpreter is required. <code>ltmermaid.sty</code> is an implementation dedicated to LuaLaTeX that provides the same macros (the <code>Renderer</code> option, <code>\Mermaid...</code> macros, and the <code>mermaid</code> environment) as <code>mermaid.sty</code>. The CLI is invoked via Lua's <code>os.execute</code>.

3584 *ltx-talk* – A class for typesetting presentations

Web page on CTAN <https://ctan.org/pkg/ltx-talk>

name	<i>ltx-talk</i>
caption	A class for typesetting presentations
author	Wright, Joseph
copyright	Joseph Wright (2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.1.1 (2025-07-14)
last changes	2025-07-14
year	2025
description	(no language specified) This class is <i>highly</i> experimental, and changes may occur to almost all interfaces. Development is focussed on tagging/functionality as the primary driver; as such, support for design aspects is likely to be lower priority.

It **requires** LaTeX 2025-11-01: this is currently available as a pre-release by using `lualatex-dev` or `pdflatex-dev`.

The *ltx-talk* class is focused on producing (on-screen) presentations, along with support material such as handouts and speaker notes. Content is created in a `frame` environment, each of which can be divided up into a number of slides (actual output pages). A simple ‘overlay’ notation is used to specify which material appears on each slide within a frame. The class supports a range of environments to enable complex slide relationships to be constructed.

The appearance of slides is controlled by a template system. Many of the elements of slides can be adjusted by setting simple key-based values in the preamble. More complex changes can be implemented by altering specific, targeted definitions without needing to rewrite entire blocks of code. This allows a variety of visual appearances to be selected for the same content source.

The *ltx-talk* class has syntax similar to the popular *beamer* class, although there are some (deliberate) differences. However, *ltx-talk* has been implemented to support creation of tagged (accessible) PDF output as a core aim. As such, it is suited to creating output for reuse in other formats, e.g. HTML conversions, without additional steps.

3600 ltxkeys – A robust key parser for LaTeXWeb page on CTAN <https://ctan.org/pkg/ltxkeys>

name	ltxkeys
caption	A robust key parser for LaTeX
author	Musa, Ahmed
copyright	Ahmed Musa (2011)
license	lppl = The LaTeX Project Public License (free)
version	0.0.3c
description	(no language specified) The package provides facilities for creating and managing keys in the sense of the keyval and xkeyval packages, but it is intended to be more robust and faster. Its robustness comes from its ability to preserve braces in key values throughout parsing. The need to preserve braces in key values arises often in parsing keys (for example, in the xwatermark package). The package is faster than xkeyval package because (among other things) it avoids character-wise parsing of key values (called "selective sanitization" by the xkeyval package). The package also provides functions for defining and managing keys.

3607 *lua-check-hyphen* – Mark hyphenations in a document, for checking

Web page on CTAN <https://ctan.org/pkg/lua-check-hyphen>

name	<code>lua-check-hyphen</code>
caption	Mark hyphenations in a document, for checking
author	Gundlach, Patrick
copyright	Patrick Gundlach (2012–2018)
license	mit = MIT License (free)
version	0.7a (2018-04-19)
last changes	2018-04-19
year	2018
description	(no language specified) The package looks at all hyphenation breaks in the document, comparing them against a white-list prepared by the author. If a hyphenation break is found, for which there is no entry in the white-list, the package flags the line where the break starts. The author may then either add the hyphenation to the white-list, or adjust the document to avoid the break.

3611 `lua-regression` – Add polynomial regressions to graphs

description	(no language specified) This package is meant for setting parameters in a LuaLaTeX document in a more programmatic way with YAML. Parameters can be specified by adding a ” <i>recipe</i> ” file. These recipe files describe the parameter’s type, placeholders and/or default values. From thereon, the placeholders can be displayed in the document and an ” <i>example</i> ” document can be created. An ” <i>actual copy</i> ” document can be created by loading additional ” <i>payload</i> ” files, which all must correspond to a recipe file.

3612 `lua-tikz3dtools` – Draw properly occluded 3D parametric objects under perspective projection

Web page on CTAN	https://ctan.org/pkg/luatikz3dtools
name	<code>lua-tikz3dtools</code>
caption	Draw properly occluded 3D parametric objects under perspective projection
author	Nice, Jasper
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1.0 (2025-09-04)
last changes	2025-09-04

year	2025
description	(no language specified) This — currently experimental — package improves on existing 3D capabilities in <i>TikZ</i>. In particular, the package enables z-sorting of multiple triangulated parametric objects and uses elaborate occlusion logic. The parametric objects are defined using <code>pgfkeys</code>, and endeavor to enable user customization. All of the 3D math is handled in Lua, and the results are projected onto the 2D <i>TikZ</i> canvas. The user is enabled to use linear, affine and projective transformations on their parametric objects. The current aim of the package is to enable parametric object clipping, and to improve on the occlusion logic.

3617 lua-uni-algos – Unicode algorithms for LuaTeX

Web page on CTAN <https://ctan.org/pkg/lua-uni-algos>

name	lua-uni-algos
caption	Unicode algorithms for LuaTeX
author	Krüger, Marcel
copyright	Marcel Krüger (2020-2022)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.4.1 (2022-02-26)
last changes	2022-02-26
year	2022
description	(no language specified) Lua code working with Unicode data has to deal with quite some challenges. For example there are many canonically equivalent sequences which should be treated in the same way, and even identifying a single character becomes quite different once you have to deal with all kinds of combining characters, emoji sequences and syllables in different scripts. Therefore <code>lua-uni-algos</code> wants to build a collection of small libraries implementing algorithms to deal with lots of the details in Unicode, such that authors of LuaTeX packages can focus on their actual functionality instead of having to fight against the peculiarities of Unicode. Given that this package provides Lua modules, it is only useful in Lua(HB)TeX. Additionally, it expects an up-to-date version of the <code>unicode-data</code> package to be present. This package is intended for package authors only; no user-level functionality provided.

3620 **lua-widow-control** – Automatically remove widows and orphans from any document

Web page on CTAN <https://ctan.org/pkg/lua-widow-control>

name	lua-widow-control
caption	Automatically remove widows and orphans from any document
author	Chernoff, Max
copyright	gucci-on-fleek (2021-2022)
license	cc-by-sa-4 = CC BY-SA 4.0 (free)
license	other-free = Free license not otherwise listed (free)
version	3.0.1 (2024-03-11)
last changes	2024-03-11
year	2024
description	(no language specified) Unmodified TeX has very few ways of preventing widows and orphans. In documents with figures, section headings, and equations, TeX can stretch the vertical glue between items in order to prevent widows and orphans, but many documents have no figures or headings. TeX can also shorten the page by 1 line, but this will give each page a different length which can make a document look uneven. The typical solution is to strategically insert <code>\looseness=1</code>, but this requires manual editing every time that the document is edited. Lua-widow-control is essentially an automation of the <code>\looseness</code> method: it uses Lua callbacks to find "stretchy" paragraphs, then it lengthens them to remove widows and orphans. Lua-widow-control is compatible with all LuaTeX and LuaMetaTeX-based formats. All that is required is to load the package at the start of your document. To load:

- Plain LuaTeX: `\input lua-widow-control`
- LuaLaTeX: `\usepackage{lua-widow-control}`
- ConTeXt: `\usemodule[lua-widow-control]`
- OpTeX: `\load[lua-widow-control]`

3621 lua2dox – Auto-documentation of lua code

Web page on CTAN <https://ctan.org/pkg/lua2dox>

name	lua2dox
caption	Auto-documentation of lua code
author	Dales, Simon
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.2
description	(no language specified) The package extends the well-known C-like language autodoc tool, <code>doxygen</code>, to read and document <code>lua</code> code. In use, you edit and test your code and periodically run the autodoc tool to update the documentation, which may be viewed via an html browser. Autodoc tools can read the code well enough to find <code>function/...</code> declarations and document them. If the code also contains appropriately formatted "magic comments", the tool can use them to supplement the documentation. The package is a first prototype of a planned <code>TeX2DoX</code> tool (in development), which will process joint (La)TeX/lua documents.

version	1.0.2 (2023-05-26)
last changes	2023-05-26
year	2023
description	(no language specified) This package provides a portable computer algebra system capable of symbolic computation, written entirely in Lua, designed for use in LuaLaTeX. Features include: arbitrary-precision integer and rational arithmetic, factoring of univariate polynomials over the rationals and finite fields, number theoretic algorithms, symbolic differentiation and integration, and more. The target audience for this package are mathematics students, instructors, and professionals who would like some ability to perform basic symbolic computations within LaTeX without the need for laborious and technical setup.

3626 *luacensor* – Securely redact sensitive information using Lua

Web page on CTAN <https://ctan.org/pkg/luacensor>

name	LuaCensor
caption	Securely redact sensitive information using Lua
author	Granet, Elijah Z
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
license	ofl = The SIL Open Font License (free)
version	1.1.1
description	(no language specified) This package provides simple tools for creating redacted documents. Its tools are useful for lawyers, workers in sensitive industries, and others who need to easily produce both unrestricted versions of documents (for limited, secure release) and restricted versions of documents (for general release). Redaction is done both by hiding all characters and by slightly varying the length of strings to prevent jigsaw identification. It also is friendly to screen readers by adding alt-text indicating redacted content.

3631 luagcd – Computation of gcd of integers inside LaTeX using Lua

Web page on CTAN <https://ctan.org/pkg/luagcd>

name	luagcd
caption	Computation of gcd of integers inside LaTeX using Lua
author	Chetan Shirore and Ajit Kumar
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1

description	(no language specified) Using Lua, the luagcd package is developed to find the greatest common divisor (gcd) of integers in LaTeX. The package provides commands to obtain step-by-step computation of gcd of two integers by using the Euclidean algorithm. In addition, the package has the command to express gcd of two integers as a linear combination. The Bezout's Identity can be verified for any two integers using commands in the package. No particular environment is required for the use of commands in the package. It is written in Lua, and the TeX file has to be compiled with the LuaLaTeX engine.

author	Mégy, Damien
license	cc0 = CC0 1.0 (free)
version	(2026-03-16)
last changes	2026-03-16
year	2026
description	(no language specified) This package allows to draw pictures and do computations in plane hyperbolic geometry, in the Poincaré disk model. Computations are done with Lua, and graphics are generated with TikZ. The package is written in Lua and requires LuaLaTeX. Features: • Draw geodesic lines, segments, polygons, rays, circles, horocycles, hypercycles. • Label and mark segments, angles • Compute intersections of geodesics, circles, symmetries, reflections, exponential maps, automorphisms

- Draw hyperbolic triangle tilings with a simple LaTeX macro

Example tiling : <https://raw.githubusercontent.com/dmegy/luahyperbolic/refs/heads/main/triangle-tiling-2-4-5.png>

name	luainputenc
caption	Replacing inputenc for use in LuaTeX
author	Roux, Élie
author	Pégourié-Gonnard, Manuel
copyright	Elie Roux (2009)
license	pd = Public Domain Software (free)
version	0.973
description	(no language specified) LuaTeX operates by default in UTF-8 input; thus LaTeX documents that need 8-bit character-sets need special treatment. (In fact, LaTeX documents using UTF-8 with "traditional" — 256-glyph — fonts also need support from this package.) The package, therefore, replaces the LaTeX standard <i>inputenc</i> for use under LuaTeX. With a current LuaTeX, the package has the same behaviour with LuaTeX as <i>inputenc</i> has under pdfTeX.

3639 *luakeys* – A Lua module for parsing key-value options

Web page on CTAN <https://ctan.org/pkg/luakeys>

name	luakeys
caption	A Lua module for parsing key-value options
author	Friedrich, Josef
copyright	Josef Friedrich (2021-2025)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.17.0 (2025-07-19)
last changes	2025-07-19
year	2025

description	(no language specified) This package provides a Lua module that can parse key-value options like the TeX packages keyval , kvsetkeys , kvoptions , xkeyval , pgfkeys etc. <code>luakeys</code> , however, accomplishes this task entirely by using the Lua language and does not rely on TeX. Therefore this package can only be used with the TeX engine LuaTeX . Since <code>luakeys</code> uses LPeg , the parsing mechanism should be pretty robust.

3643 lualatex-math – Fixes for mathematics-related LuaLaTeX issues

Web page on CTAN <https://ctan.org/pkg/lualatex-math>

name	lualatex-math
caption	Fixes for mathematics-related LuaLaTeX issues
author	Stephani, Philipp
copyright	Google LLC (2021, 2022)
copyright	Philipp Stephani, Joseph Wright, and Will Robertson (2011-2020)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.12 (2022-01-01)
last changes	2022-01-01
year	2022
description	(no language specified) The package patches a few commands of the LaTeX2e kernel and the amsmath and mathtools packages to be more compatible with the LuaTeX engine. It is only meaningful for LuaLaTeX documents containing mathematical formulas, and does not exhibit any new functionality. The fixes are mostly moved from the unicode-math package to this package since they are not directly related to Unicode mathematics typesetting.

3644 lua_latex-platform – Load platform-specific code into LuaTeX

Web page on CTAN	https://ctan.org/pkg/lualatex-platform
name	luaLaTeX-platform
caption	Load platform-specific code into LuaTeX
author	Stephani, Philipp
copyright	Philipp Stephani (2011)
license	other-free = Free license not otherwise listed (free)
version	0.1
description	(no language specified) While platform-specific problems can often be handled purely in Lua, it sometimes happens that access to the native operating system API is required. For such tasks, Lua itself makes it possible to load extension modules written in C (or other languages provided that they can produce a dynamic library that exports a certain C-style function). The present package aims to provide such an extension module that is usable from both Lua and LuaTeX and adds a small set of features not available otherwise. This release merely supports listing the fonts known to the operating system (this feature could usefully be integrated into the luaotfload package).

3647 lualinalg – A linear algebra package for LuaLaTeX

Web page on CTAN <https://ctan.org/pkg/lualinalg>

name	lualinalg
caption	A linear algebra package for LuaLaTeX
author	Chetan Shirore and Ajit Kumar
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.9 (2023-11-17)
last changes	2023-11-17
year	2023
description	(no language specified) The lualinalg package is developed to perform operations on vectors and matrices defined over the field of real or complex numbers inside LaTeX documents. It provides flexible ways for defining and displaying vectors and matrices. No particular environment of LaTeX is required to use commands in the package. The package is written in Lua, and tex file is to be compiled with the LuaLaTeX engine. The time required for calculations is not an issue while compiling with LuaLaTeX. There is no need to install Lua on the user's system as TeX distributions (TeX Live or MikTeX) come bundled with LuaLaTeX. It may also save users' efforts to copy vectors and matrices from other software (which may not be in LaTeX-compatible format) and to use them in a tex file. The vectors and matrices of reasonable size can be handled with ease. The package can be modified or extended by writing custom Lua programs.

3655 luanumint – Numerical integration using Lua inside LaTeX documents

Web page on CTAN <https://ctan.org/pkg/luanumint>

name	luanumint
caption	Numerical integration using Lua inside LaTeX documents
author	Chetan Shirore and Ajit Kumar
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.2 (2023-11-17)
last changes	2023-11-17
year	2023
description	(no language specified) This package uses Lua to calculate the numerical integral value of real-valued functions of a real variable over closed and bounded intervals. The package provides commands to perform numerical integration using the mid-point, trapezoidal, and Simpson's one-third and three-eighth rules. The <code>loadstring</code> command is used to load and evaluate functions at different points in the mathematics environment of Lua. The package also provides commands to perform numerical integration using step-by-step calculations. The package's commands have an optional argument to round off the numbers to the desired number of decimal places. The <code>breqn</code> package is loaded to display and align step-by-step calculations properly. Advanced users can customize the code to achieve the desired formatting of step-by-step computations. The package can assist in creating various problems on numerical integration with their solutions. The results obtained using different methods of numerical integration can be compared. It can save users' efforts of doing computations involving numerical integration in external software and copying them inside LaTeX documents.

3656 luaoptions – Option handling for LuaLaTeX packages

Web page on CTAN	https://ctan.org/pkg/luaoptions
name	luaoptions
caption	Option handling for LuaLaTeX packages
author	Peron, Jacques
copyright	The LuaLaTeX-Tools Project (2015-2022)
license	mit = MIT License (free)
version	0.8 (2022-10-30)
last changes	2022-10-30
year	2022
description	(no language specified) This LuaLaTeX package provides extensive support for handling <i>options</i> , on package level and locally. It allows the declaration of sets of options, along with defaults, expected/allowed values and limited type checking. These options can be enforced as package options, changed at any point during a document, or overwritten locally by optional macro arguments. It is also possible to instantiate an Options object as an independent Lua object, without linking it to a package. <code>luaoptions</code> can be used to enforce and prepopulate options, or it can be used to simply handle the parsing of optional <code>key=value</code> arguments into proper Lua tables.

3659 *luaplot* – Plotting graphs using Lua

Web page on CTAN <https://ctan.org/pkg/luaplot>

name	luaplot
caption	Plotting graphs using Lua
author	Chetan Shirore and Ajit Kumar
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.5 (2023-11-17)
last changes	2023-11-17
year	2023

description	(no language specified) This package uses Lua to plot graphs of real-valued functions of a real variable in LaTeX. It furthermore makes use of the MetaPost system as well as the luamplib and luacode packages. It provides an easy way for plotting graphs of standard mathematical functions. There is no particular environment in the package for plotting graphs. It also works inside LaTeX floating environments, like tables and figures. The compilation time for plotting several graphs in LaTeX using this package is significantly less with the LuaLaTeX engine. The package is based on the core idea of loading mathematical functions inside Lua and determining plot points using different methods available in Lua. After determining plot points in Lua, two different approaches are used: • Pass plot points to the MetaPost system via luamplib . • Pass plot points to the TikZ package.

description	(no language specified) The LaTeX kernel (LaTeX2e 2015/10/01 onward) builds in support for LuaTeX functionality, also available as <code>lualuatex.tex</code> for users of plain TeX and those with older LaTeX kernel implementations. This support is based on ideas taken from the original <code>luatexbase</code> package, but there are interface differences. This ‘stub’ package provides a compatibility layer to allow existing packages to upgrade smoothly to the new support structure.

version	5.7 (2026-02-20)
last changes	2026-02-20
year	2026
description	(no language specified) This is a Lua(La)TeX macro package that supports typesetting Korean documents including Old Hangul texts. As LuaTeX has opened up access to almost all the hidden routines of TeX engine, users can obtain more beautiful outcome using this package rather than other Hangul macros operating on other engines. LuaTeX version 1.10+ and luaotfload version 2.96+ are required for this package to run. This package also requires the cjk-ko package for its full functionality.

3677 *luatikz* – A 2D graphics library to draw TikZ graphics using the Lua programming languageWeb page on CTAN <https://ctan.org/pkg/luatikz>

name	luatikz
caption	A 2D graphics library to draw TikZ graphics using the Lua programming language
author	Kittenberger, Axel
license	mit = MIT License (free)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.12.0 (2024-12-04)
last changes	2024-12-04
year	2024
description	(no language specified) This package provides a comfort graphics library to work with graphic objects as immutables in the Lua programming language. It writes code for the TikZ package. It overloads operators, so you can use standard math expressions to work with graphical objects. There probably isn't anything that couldn't been done just as well with pgfmath and TikZ directly. However, if a graphic gets more complicated, Lua may just be easier to work with as base.

3680 `luavlna` – Prevent line breaks after single letter words, units, or academic titles

Web page on CTAN <https://ctan.org/pkg/luavlna>

name `luavlna`

caption Prevent line breaks after single letter words, units, or academic titles

author Hoftich, Michal

license lpl1.3 = The LaTeX Project Public License 1.3 (free)

version 0.1n (2025-10-29)

last changes 2025-10-29

year 2025

description (no language specified) In some languages, like Czech or Polish, there should be no single letter words at the end of a line, according to typographical norms. This package handles such situations using LuaTeX's callback mechanism. In doing this, the package can detect languages used in the text and insert spaces only in parts of the document where languages requiring this feature are used.

Another feature of this package is the inclusion of non-breakable space after initials (like in personal names), after or before academic degrees, and between numbers and units.

The package supports both plain LuaTeX and LuaLaTeX.

BTW: "vlna" is the Czech word for "wave" or "curl" and also denotes the tilde which, in TeX, is used for "unbreakable spaces".

3688 *lucold* – Use old-style digits with Lucida fontsWeb page on CTAN <https://ctan.org/pkg/lucold>

name	lucold
caption	Use old-style digits with Lucida fonts
author	Loreti, Maurizio
license	gpl = GNU General Public License (free)
description	(no language specified) The package provides the means to switch the rendering of all the digits of a document from ‘lining’ to ‘old-style’ numbers, when using Lucida fonts. The switch affects all digits in text mode, or all digits in text and math mode. It works both for normal weight and boldface text and math; since the boldface old-style digits are in the Lucida Expert font set, you need it for the boldface digits. Includes a set of AWK programs used to automatically build <code>.fd</code> , <code>.tfm</code> , and <code>.vf</code> files from the existing Lucida PSNFSS distribution, and that may easily be changed for the generation of different virtual files for whatever font.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/lucold/README

3694 *lwarp* – Converts LaTeX to HTML

Web page on CTAN <https://ctan.org/pkg/lwarp>

name	lwarp
caption	Converts LaTeX to HTML
author	Dunn, Brian
copyright	Brian Dunn (2016-2025)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.921 (2026-02-24)
last changes	2026-02-24
year	2026
description	(no language specified) This package converts LaTeX to HTML by using LaTeX to process the user's document and generate HTML tags. External utility programs are only used for the final conversion of text and images. Math may be represented by SVG files or MathJax. Hundreds of LaTeX packages are supported, and their load order is automatically verified. Documents may be produced by LaTeX, LuaLaTeX, XeLaTeX, and by several CJK engines, classes, and packages. A <code>texlua</code> script automates compilation, index, glossary, and batch image processing, and also supports latexmk. Configuration is semi-automatic at the first manual compile. Support files are self-generated. Print and HTML versions of each document may coexist. Assistance is provided for HTML import into EPUB conversion software and word processors. Requirements include the commonly-available Poppler utilities, and Perl. Detailed installation instructions are included for each of the major operating systems and TeX distributions. A quick-start tutorial is provided.

3702 lyx – Document processor based on LaTeX

Web page on CTAN <https://ctan.org/pkg/lyx>

name	lyx
caption	Document processor based on LaTeX
author	Ettrich, Matthias
license	gpl = GNU General Public License (free)
version	1.3.2

description	(no language specified) LyX is an open source document processor that encourages an approach to writing based on the structure of your documents, not their appearance. LyX lets you concentrate on writing, leaving details of visual layout to the software. LyX produces its output using LaTeX in the background; LyX is far more than a front-end to LaTeX, however. No knowledge of LaTeX is necessary to use LyX, but such knowledge sometimes helps explain the way LyX is behaving. LyX is not provided on CTAN; potential users should go to the LyX home page for more information.

description	(no language specified) This package provides a list data structure and common list functions such as <code>\macrolistadd</code>, <code>\macrolistremove</code>, <code>\macrolistforeach</code>, as well as <code>\macrolistremovelast</code> (similar to C++’s <code>pop_back</code>) and <code>\macrolistjoin</code> (similar to Javascript’s <code>arr.join</code>). Unlike most programming languages, the lists in this package are 1-indexed, meaning the first element is numbered 1, the second element numbered 2, and so on.

3724 mahjong – Typeset Mahjong Tiles using MPSZ Notation

Web page on CTAN <https://ctan.org/pkg/mahjong>

name	mahjong
caption	Typeset Mahjong Tiles using MPSZ Notation
author	Schmitz, Daniel
copyright	Daniel Schmitz (2021)
license	cc-by-1 = CC BY 1.0 (free)
license	mit = MIT License (free)
version	1.1 (2025-01-06)
last changes	2025-01-06
year	2025
description	(no language specified) The mahjong package provides a LaTeX2e and LaTeX3 interface for typesetting mahjong tiles using an extended version of MPSZ algebraic notation. Features include spaces, rotated, blank, and concealed tiles, as well as red fives. The size of the mahjong tiles can be controlled using a package option and an optional argument of \mahjong. It is primarily aimed at Riichi (aka. Japanese) Mahjong but can be used to typeset any style of mahjong.

3731 *makebarcode* – Print various kinds 2/5 and Code 39 bar codes

Web page on CTAN <https://ctan.org/pkg/makebarcode>

name	<code>makebarcode</code>
caption	Print various kinds 2/5 and Code 39 bar codes
author	Wagner, Zdeněk
license	lppl = The LaTeX Project Public License (free)
version	1.0
description	(no language specified) The package contains macros for printing various 2/5 bar codes and Code 39 bar codes. The macros do not use fonts but create the bar codes directly using vertical rules. It is therefore possible to vary width to height ratio, ratio of thin and thick bars. The package is therefore convenient for printing ITF bar codes as well as bar codes for identification labels for HP storage media.

caption	Tabular column heads and multilined cells
author	Lapko, Olga
copyright	Olga Lapko (2005-2007)
license	lpl = The LaTeX Project Public License (free)
version	0.1e
description	(no language specified) This package supports common layouts for tabular column heads in whole documents, based on one-column tabular environment. In addition, it can create multi-lined tabular cells.

The Package also offers:

- a macro which changes the vertical space around all the cells in a tabular environment (similar to the function of the **tabls** package, but using the facilities of the **array**)
- macros for multirow cells, which use the facilities of the **multirow** package;
- macros to number rows in tables, or to skip cells;
- diagonally divided cells;
- horizontal lines in tabular environments with defined thickness.

caption	Make a Cookbook
author	Murphy, Terrence
author	D’Amico, Rosalie
copyright	Terrence P. Murphy and Rosalie D’Amico (2018)

license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.85
description	(no language specified) The makecookbook bundle contains the files needed to create a nice quality family cookbook in a form ready to submit to most print-on-demand companies. Modifiable choices have been made regarding standard book features such as trim size, margins, headers/footers, chapter heading formatting, front matter (copyright page, table of contents, etc.) and back matter (index). Commands and environments have been created to format the food stories and recipes. The user will need to: 1. supply their own food stories and recipes(!), and 2. install the needed fonts. We assume a LuaTeX compile. Please note that no new document class or package is included here. Rather, we provide a modifiable preamble and a small number of other files that, together, fully support creation of all of the <i>internal</i> pages of a cookbook (i.e., everything except the cover art).

3740 *makefonts* – Shell scripts to generate bitmaps from Metafont sources

Web page on CTAN <https://ctan.org/pkg/makefonts>

name *makefonts*
caption Shell scripts to generate bitmaps from Metafont sources
author Kuhlmann, Volker
license pd = Public Domain Software (free)
version 2.0
description (no language specified) This package contains shell scripts which generate PK files, based on the long-established script *allcm*.

Modern TeX distributions use Adobe Type 1 fonts for preference (if they allow bitmap forms at all), and will generate such bitmap fonts as are needed on-the-fly. These scripts are therefore most useful to those who have a principled objection to the use of outline fonts (or to the design of those available).

3743 *makegobbler* – Keep or drop some part of LaTeX source code

Web page on CTAN	https://ctan.org/pkg/makegobbler
name	<code>makegobbler</code>
caption	Keep or drop some part of LaTeX source code
author	Belaïche, Vincent
copyright	Vincent Belaïche (2025-2026)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
license	other-free = Free license not otherwise listed (free)
version	0.3.2 (2026-02-15)
last changes	2026-02-15
year	2026

description	(no language specified) The makegobbler package provides a mechanism to selectively drop (gobble) or keep ("ungobble") portions of LaTeX source code, either conditionally or unconditionally. The affected code is delimited by user-defined control sequences that act as explicit markers. For example, you can define a conditional as follows: <code>\newif\ifkeep</code> You can then make a portion of the source conditional like this: <code>\keepfalse</code> <code>\MGBkeep*\ifkeep\SomeArbitraryDelimitingControlSequence</code> Here, everything — including <code>\fi#!{ }_ ^ \$</code> — is dropped. <code>\SomeArbitraryDelimitingControlSequence</code>

3747 `makelabels` – Add a ‘`makelabels`’ feature to KOMA-Script letter classes and package

Web page on CTAN	https://ctan.org/pkg/makelabels
name	<code>makelabels</code>
caption	Add a ‘ <code>makelabels</code> ’ feature to KOMA-Script letter classes and package
author	Kohm, Markus
copyright	Markus Kohm (2009-2021)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0
description	(no language specified) The standard letter class <code>letter</code> has a label feature. You can activate it using <code>\makelabels</code>. While in Germany window envelopes are common, printing labels is not common, and <code>scrlltr2</code> has never supported label printing. Using <code>makelabels.lco</code> does implement a <code>\makelabels</code> feature similar to the standard letter classes. Currently there are (almost) no configuration features for <code>makelabels.lco</code>. But you may use the <code>enlab</code> package after loading <code>makelabels.lco</code> to get various configuration features.

3749 *makeprog* – A literate system for TeX programming

Web page on CTAN	https://ctan.org/pkg/makeprog
name	makeprog
caption	A literate system for TeX programming
author	Schrod, Joachim
copyright	Joachim Schrod (1988-1990)
license	gpl = GNU General Public License (free)
version	1.0.1
description	(no language specified) A literate programming system strongly influenced by the ideas of Knuth’s web system, but designed for processing TeX-based sources (documentation processing is provided in both Plain TeX and LaTeX). In contrast to the LaTeX project’s doc and docstrip, but in common with Knuth’s system, there is a separate program (<i>makeprog</i>) for producing code to run (equivalent to Knuth’s <i>tangle</i>). However, <i>makeprog</i> doesn’t rearrange code in the way that <i>tangle</i> does.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/support/makeprog/readme

3750 *maker* – Include Arduino or Processing code in LaTeX documents

Web page on CTAN <https://ctan.org/pkg/maker>

name *maker*
 caption Include Arduino or Processing code in LaTeX documents
 author Lagos Suárez, Fausto Mauricio
 license lpp11.3c = The LaTeX Project Public License 1.3c (free)
 version 1.0 (2017-07-15)
 last changes 2017-07-15
 year 2017
 description (no language specified) The first version of the package allows to include Arduino or Processing code using three different forms:

1. writing the code directly in the LaTeX document
2. writing Arduino or Processing commands in line with the text
3. calling to Arduino or Processing files

All these options support the syntax highlighting of the oficial IDE.

3751 *makerobust* – Making a macro robust (legacy package)

Web page on CTAN <https://ctan.org/pkg/makerobust>

name makerobust

caption Making a macro robust (legacy package)

author Oberdiek, Heiko

copyright Oberdiek Oberdiek Package Support Group (2019)

license lpl11.3c = The LaTeX Project Public License 1.3c (free)

version 2.0 (2019-11-12)

last changes 2019-11-12

year 2019

description (no language specified) Heiko Oberdiek's *makerobust* package defined a command with name `\MakeRobustCommand` that could be used to make fragile commands robust.

The LaTeX format has, since 2015, included a command `\MakeRobust` with the same syntax and behaviour. Also by 2019, almost all commands in LaTeX that may be used in a moving argument are already robust.

This package is now just a simple one-liner defining the name `\MakeRobustCommand` as an alias for `\MakeRobust`.

This package should not be used in any new documents.

3764 manjutex – Manju language supportWeb page on CTAN <https://ctan.org/pkg/manjutex>

name	manjutex
caption	Manju language support
author	Corff, Oliver
license	gpl = GNU General Public License (free)
description	(no language specified) Manju is a language of North East Asia, belonging to the Tungusic branch of the Altaic languages. Though it is virtually not spoken anymore, it survives in written form as Manju was the native language of the rulers of the Qing dynasty (1644–1911) in China. Large quantities of documents of the Imperial Archives survive, as well as some of the finest dictionaries ever compiled in Asia, like the Pentaglot, a dictionary comprising Manju, Tibetan, Mongolian, Uighur and Chinese. ManjuTeX was developed on the basis of MonTeX, and provides all necessary characters for writing standard Manju as well as transliterated Tibetan texts, for which purpose a number of additional characters were created. This catalogue entry describes the ‘original’ ManjuTeX; its functionality has now been subsumed into monTeX, though the obsolete ManjuTeX remains on the archive.

3769 manyfoot – Adds footnote levels to standard LaTeX’s footnote mechanism

Web page on CTAN	https://ctan.org/pkg/manyfoot
name	<code>manyfoot</code>
caption	Adds footnote levels to standard LaTeX’s footnote mechanism
author	Rozhenko, Alexander I.
copyright	Alexander I. Rozhenko (1998-2005)
license	lppl = The LaTeX Project Public License (free)
version	1.11 (2019-08-03)
last changes	2019-08-03
year	2019
description	(no language specified) Implements a command, <code>\newfootnote</code> , that adds footnote levels to standard LaTeX’s footnote mechanism. Footnotes of every additional level are automatically grouped together on a LaTeX2e output page and are separated from other levels by special vertical spaces. The command <code>\newfootnote</code> allows customisation of the way footnotes of additional level are represented in LaTeX2e documents. Two customisation styles are available now: the <code>plain</code> style is the ordinary LaTeX style of footnote representation; the <code>para</code> style causes footnotes to be typeset as a run-in paragraph.

3770 *manyind* – Provides support for many indexes

This package is part of the **ncctools** bundle.

year	2022
description	(no language specified) This package provides LaTeX, pdfLaTeX, XeLaTeX and LuaLaTeX support for the Marcellus family of fonts, designed by Brian J. Bonislawsky. Marcellus is a flared-serif family, inspired by classic Roman inscription letterforms. There is currently just a regular weight and small-caps. The regular weight will be silently substituted for bold.

3779 *marginfix* – Patch `\marginpar` to avoid overfull margins

Web page on CTAN <https://ctan.org/pkg/marginfix>

name	<code>marginfix</code>
caption	Patch <code>\marginpar</code> to avoid overfull margins
author	Hicks, Stephen
copyright	Stephen D. Hicks (2010-2020)
license	lppl = The LaTeX Project Public License (free)
version	1.2 (2020-05-06)
last changes	2020-05-06
year	2020

description	(no language specified) Authors using LaTeX to typeset books with significant margin material often run into the problem of long notes running off the bottom of the page. A typical workaround is to insert <code>\vshift</code> commands by hand, but this is a tedious process that is invalidated when pagination changes. Another workaround is <i>memoir</i> 's <code>\sidebar</code> function, but this can be unsatisfying for short textual notes, and standard <code>marginpars</code> cannot be mixed with sidebars. This package implements a solution to make <code>marginpars</code> "just work" by keeping a list of floating inserts and arranging them intelligently in the output routine.

3784 *marnote* – Place text in the margin of a document

Web page on CTAN <https://ctan.org/pkg/marnote>

name *marnote*
caption Place text in the margin of a document
author McCauley, James Darrell
license noinfo = noinfo
version 0.1
description (no language specified) The package rotates a text (using *dvips* commands) and places it in the margin of a document. The position of the margin is assumed, rather than calculated, so the package will not work with other than the author's original paper size (presumably letter). A command for writing a pale "DRAFT" diagonally across a page, is also provided.

The package apparently relies on PostScript code from the *psfig* bundle.
on CTAN <https://ctan.org/tex-archive/macros/latex209/contrib/misc/marnote.sty>

3792 *math-operator* – Predefined and new math operators

Web page on CTAN	https://ctan.org/pkg/math-operator
name	<code>math-operator</code>
caption	Predefined and new math operators
author	Kosowsky, Conrad
copyright	Conrad Kosowsky (2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.3a (2025-09-10)
last changes	2025-09-10
year	2025
description	(no language specified) This package defines control sequences for roughly one hundred and fifty math operators, including special functions, probability distributions, pure mathematical constructions, and a variant of <code>\overline</code>. The package also provides an interface for users to define new math operators similar to the amsopn package. New operators can be medium or bold weight, and they may be declared as <code>\mathord</code> or <code>\mathop</code> subformulas.

caption LaTeX commands for the French game “Mathador”

author Pierquet, Cédric

license other-free = Free license not otherwise listed (free)

license lpl1.3c = The LaTeX Project Public License 1.3c (free)

version 0.1.1 (2025-09-24)

last changes 2025-09-24

year 2025

description (no language specified) This is a LaTeX package with graphic commands for the French game MATHADOR (by author Éric Trouillet and Réseau CANOPÉ).

The principle of the game is like this:

- Roll the dice!
- They give you one target number (between 0 and 99) and five numbers to use to reach it.
- You can use the four arithmetic operations to get there.

documentation (French) *Package documentation*: <https://ctan.org/tex-archive/macros/latex/contrib/mathador/doc/mathador-doc.pdf>

3798 *mathastext* – Use the text font in maths mode

Web page on CTAN <https://ctan.org/pkg/mathastext>

name	mathastext
caption	Use the text font in maths mode
author	Burnol, Jean-François
copyright	Jean-François Burnol (2011-2019, 2022-2024)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.4e (2024-10-26)
last changes	2024-10-26
year	2024
description	(no language specified) The package uses a text font (usually the document's text font) for the letters of the Latin alphabet needed when typesetting mathematics. (Optionally, other characters in the font may also be used). This facility makes possible (for a document with simple mathematics) a far wider choice of text font, with little worry that no specially designed accompanying maths fonts are available. The package also offers a simple mechanism for using many different choices of (text hence, now, maths) font in the same document. Of course, using one font for two purposes helps produce smaller PDF files.

version 3.0a (2026-02-07)
last changes 2026-02-07
year 2026
description (no language specified) The *mathfont* package adapts unicode text fonts for math mode. The package allows the user to specify a default unicode font for different classes of math symbols, and it enables Unicode input in math mode. The package provides tools to change the font locally for math alphabet characters. When typesetting with LuaTeX, *mathfont* adds resizable delimiters, big operators, and a *MathConstants* table to text fonts.

3811 *mathgifs* – Support for Microsoft Georgia and ITC Franklin Gothic

Web page on CTAN	https://ctan.org/pkg/mathgifs
name	mathgifs
caption	Support for Microsoft Georgia and ITC Franklin Gothic
author	Veytsman, Boris
copyright	Boris Veytsman (2009)
license	other-free = Free license not otherwise listed (free)
version	0.4

description	(no language specified) The package offers LaTeX support for Microsoft Georgia and ITC Franklin Gothic fonts. Support is available both for text and mathematics. The fonts are supplied, for example, with Microsoft Windows distributions. The distributed fonts are available in TrueType format; to use the package, a user must translate the fonts to Type 1 format (using, for example, <code>ttf2pt1</code>). The maths support is very preliminary: much work remains on individual kerning and glyph placement

3816 *mathpartir* – Typesetting sequences of math formulas, e.g. type inference rules

Web page on CTAN <https://ctan.org/pkg/mathpartir>

name	<code>mathpartir</code>
caption	Typesetting sequences of math formulas, e.g. type inference rules
author	Remy, Didier
copyright	Didier Remy (2001-2005, 2015, 2016)
license	gpl2 = GNU General Public License, version 2 (free)
version	1.3.2

description	(no language specified) The package provides macros for typesetting math formulas in mixed horizontal and vertical mode, automatically as best fit. It provides an environment <code>mathpar</code> that behaves much as a loose centered paragraph where words are math formulas, and spaces between them are larger and adjustable. It also provides a macro <code>\inferrule</code> for typesetting fractions where both the numerator and denominator may be sequences of formulas that will be also typeset in a similar way. It can typically be used for typesetting sets of type inference rules or typing derivations. A macro <code>inferrule</code> for typesetting type inference rules.

3817 *mathpazo* – Fonts to typeset mathematics to match Palatino

Web page on CTAN <https://ctan.org/pkg/mathpazo>

name	<code>mathpazo</code>
caption	Fonts to typeset mathematics to match Palatino
author	Puga, Diego
copyright	Diego Puga (2000, 2002)
license	gpl = GNU General Public License (free)
version	1.003

description	(no language specified) The Pazo Math fonts are a family of PostScript fonts suitable for typesetting mathematics in combination with the Palatino family of text fonts. The Pazo Math family is made up of five fonts provided in Adobe Type 1 format (PazoMath, PazoMath-Italic, PazoMath-Bold, PazoMath-BoldItalic, and PazoMathBlackboardBold). These contain, in designs that match Palatino, glyphs that are usually not available in Palatino and for which Computer Modern looks odd when combined with Palatino. These glyphs include the uppercase Greek alphabet in upright and slanted shapes in regular and bold weights, the lowercase Greek alphabet in slanted shape in regular and bold weights, several mathematical glyphs (partialdiff, summation, product, coproduct, emptyset, infinity, and proportional) in regular and bold weights, other glyphs (Euro and dotlessj) in upright and slanted shapes in regular and bold weights, and the uppercase letters commonly used to represent various number sets (C, I, N, Q, R, and Z) in blackboard bold. LaTeX macro support (using package mathpazo.sty) is provided in psnfss (a required part of any LaTeX distribution).

3826 mathsemantics – Semantic math commands in LaTeX

Web page on CTAN <https://ctan.org/pkg/mathsemantics>

name	mathsemantics
caption	Semantic math commands in LaTeX
author	Bergmann, Ronny
copyright	Ronny Bergmann, Roland Herzog (2022)
license	mit = MIT License (free)
version	1.0.0 (2022-05-06)
last changes	2022-05-06
year	2022
description	(no language specified) This LaTeX package provides both syntactic and semantic helpers to typeset mathematics in LaTeX. The syntactic layer eases typesetting of formulae in general, while the semantic layer provides commands like <code>\inner{x}{y}</code> to unify typesetting of inner products. These not only unify typesetting of math formulae but also allow to easily adapt notation if a user prefers to. The semantic layer is split into topics.

3829 mathspec – A Perl filter program for use with PiCTeX

Web page on CTAN	https://ctan.org/pkg/mathspec
name	<code>mathspec</code>
caption	A Perl filter program for use with PiCTeX
author	Nickalls, Dick
author	Syropoulos, Apostolos
copyright	A. Syropoulos and R.W.D. Nickalls (2005)
license	lppl = The LaTeX Project Public License (free)
version	1.13

description	(no language specified) MathsPIC(Perl) is a development of the earlier MathsPIC(DOS) program, now implemented as a Perl script, being much more portable than the earlier program. MathsPIC parses a plain text input file and generates a plain text output-file containing commands for drawing a diagram. Version 1.0 produces output containing PiCTeX and (La)TeX commands, which may then be processed by plain TeX or LaTeX in the usual way. MathsPIC also outputs a comprehensive log-file. MathsPIC facilitates creating figures using PiCTeX by providing an environment for manipulating named points and also allows the use of variables and maths (advance, multiply, and divide)—in short—it takes the pain out of PiCTeX. Both the original DOS version and the new Perl version are available.

3830 *mathstone* – Use Adobe Stone Serif and Stone Sans for typesetting mathsWeb page on CTAN <https://ctan.org/pkg/mathstone>

name	mathstone
caption	Use Adobe Stone Serif and Stone Sans for typesetting maths
author	Adrián, Luis Marco
copyright	Luis Marco Adrián (2011)
license	gpl3 = GNU General Public License, version 3 (free)
version	2.0
description	(no language specified) The package provides metric files and LaTeX support for Stone Sans and Stone Serif fonts from Adobe, in both maths and text modes. It has everything you need to typeset in this font — except the font itself. You need to purchase the fonts themselves: the pfb files are not included in the package. To use Greek letters, you need to install the package Mathdesign. Three math versions (normal, semibold and bold) are provided for each font.
documentation	(no language specified) <i>Demonstration of character set:</i> https://ctan.org/tex-archive/fonts/mathstone/doc/test/mathstonetest.pdf
– local file	./4915666992-mathstonetest.pdf

copyright	Joseph Wright (2010-2017)
copyright	Ulrike Fischer (2020)
copyright	Lars Madsen (2007-2014)
copyright	Morten Høgholm (2007-2008)
copyright	Michael J. Downes (1997-2003)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.98l (2021-10-28)
last changes	2021-10-28
year	2021
description	(no language specified) The package performs two functions: • to make sub- and superscript operations macros, which has the effect of making their behaviour uniform and more readily understandable; and • to take advantage of the lack of infix operations (such as <code>\over</code>) in LaTeX to redesign the control of mathematical typesetting style, and to rationalise the way <code>\mathchoice</code> and dependent mechanisms work. The package offers support for breqn and is part of the bundle of the same name.
documentation	(no language specified) <i>Bundle readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/breqn/README.md

3832 *mathtex* – A CGI program to use LaTeX to put mathematics on the web

Web page on CTAN <https://ctan.org/pkg/mathtex>

name	mathtex
caption	A CGI program to use LaTeX to put mathematics on the web
author	Forkosh, John
copyright	John Forkosh Associates, Inc. (2007-2014)
license	gpl = GNU General Public License (free)
version	1.05 (2014-12-06)
last changes	2014-12-06
year	2014
description	(no language specified) MathTeX is a CGI program, written in C, that uses LaTeX and either dvipng or dvips/convert to emit GIF or PNG images of LaTeX mathematical expressions. Users can put mathematics directly in html pages with an tag of the form <pre></pre> (see the package home page for a complete discussion). MathTeX is a successor of the author's earlier mimeTeX ; but mathTeX uses real LaTeX, where as mimeTeX uses its own built-in fonts, interpreter and rendering engine. Users who have LaTeX available on their server can obtain higher quality images and full LaTeX support with mathTeX. Users whose server doesn't offer LaTeX can continue to use mimeTeX. The two programs are "plug-compatible", using the same tag "user interface", so migration is trivial. The package home page carries extensive documentation of MathTeX.

last changes	2024-10-04
year	2024
description	(no language specified) Mathtools provides a series of packages designed to enhance the appearance of documents containing a lot of mathematics. The main backbone is amsmath, so those unfamiliar with this required part of the LaTeX system will probably not find the packages very useful. Mathtools provides many useful tools for mathematical typesetting. It is based on amsmath and fixes various deficiencies of amsmath and standard LaTeX. It provides: • Extensible symbols, such as brackets, arrows, harpoons, etc.; • Various symbols such as <code>\coloneqq</code> ($\coloneqq$); • Easy creation of new tag forms; • Showing equation numbers only for referenced equations; • Extensible arrows, harpoons and hookarrows; • Starred versions of the amsmath matrix environments for specifying the column alignment; • More building blocks: multlined, cases-like environments, new gathered environments; • Maths versions of <code>\makebox</code>, <code>\llap</code>, <code>\rlap</code> etc.;

- Cramped math styles; and more...

Mathtools requires **mhsetup** .

author	Aubord, Alain
license	bsd = BSD Style License (free)
license	nocommercial = No Commercial Use (not free)
license	lppl = The LaTeX Project Public License (free)
version	2.8 (2022-10-01)
last changes	2022-10-01
year	2022

description	(no language specified) This document is a port (with a few additions) to LaTeX of the document https://www.tug.org/texshowcase/cheat.pdf produced and written in plain TeX. That original TeX document was written by Steve Seiden. The purpose of the port to LaTeX is to make it possible to use the document to test some Unicode math fonts and unicode TeX more easily. This seems to be difficult with Plain TeX where the use of a font other than the Computer Modern fonts seems to be awfully complicated.

3838 *mathtype* – Evaluation version of a commercial equation editor

Web page on CTAN	https://ctan.org/pkg/mathtype
name	MathType
caption	Evaluation version of a commercial equation editor
author	Virga, Bruce
author	Mathews, Bob
license	other-nonfree = License that prevents distribution (not free)
version	7

description	(no language specified) MathType is a point and click mathematical equation editor. While its mouse-centric user interface is somewhat the opposite of TeX's, it has a number of features that may be of interest to members of the TeX community: • It works with many Windows applications that TeX does not work directly with, such as word processors, presentation programs like PowerPoint, and many more. You can even place equations in flowcharts made with programs like Visio. • It can produce TeX and LaTeX code from its equations. This can be helpful to someone learning TeX or just to take advantage of MathType's ability to work directly in mathematical notation in order to get the nested braces right on a particularly gnarly equation. • You can even type TeX language directly into the MathType window. This allows you to get the best of both the WYSIWYG editing and TeX worlds. • MathType can also produce GIF files for websites and blogs and EPS files for desktop publishing chores. MathType does not require a product key for installation. Upon first launch, you will have an opportunity to begin a 30-day trial or to enter a purchased product key. If you decide to purchase MathType, you can use the Order MathType command within MathType itself to purchase a product key. You can also visit the Wiris website to learn more about MathType. If you have questions, email them to support@wiris.com.

3845 maybemath – Make math bold or italic according to contextWeb page on CTAN <https://ctan.org/pkg/maybemath>

name	maybemath
caption	Make math bold or italic according to context
author	Buckley, Andy
license	lppl = The LaTeX Project Public License (free)
version	(2005-02-22)
last changes	2005-02-22
year	2005
description	(no language specified) The <code>\maybebm</code> and <code>\maybeit</code> macros can be used in maths expressions to make the arguments typeset as bold or italic respectively if the surrounding context is appropriate. They are useful for writing user macros for use in general contexts. <code>\maybebm</code> is especially appropriate when section titles contain math expressions, since the title will appear bold but the header and table of contents usually replicate the title in normal width. It uses the bm package to make things bold <code>\maybeit</code> performs a similar role to <code>\mathrm{}</code> but the maths expression will be italicised if the surrounding text is. <code>\maybeit</code>subscript is provided to shift subscripts to the left if the expression is italicised.

3852 mcexam – Create randomized Multiple Choice questions

Web page on CTAN <https://ctan.org/pkg/mcexam>

name	mcexam
caption	Create randomized Multiple Choice questions
author	Vannieuwenhuyze, Jorre
copyright	Jorre Vannieuwenhuyze (2017)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.5 (2021-09-12)
last changes	2021-09-12
year	2021
description	(no language specified) This LaTeX package automatically randomly permutes the order of questions as well as the answer options in different versions of a multiple choice exam/test. Next to the exam versions themselves, the package also allows printing a concept version of the exam, a key table with the correct answers or points, and a document with solutions and explanations per exam version. The package also allows writing an R code which processes the results of the exam and calculates the grades. The following other LaTeX packages are required: enumitem , environ , etoolbox , longtable , newfile , pgffor (from the PGF/TikZ bundle), xkeyval , and xstring .

3863 mdwlist – Miscellaneous list-related commands

Web page on CTAN <https://ctan.org/pkg/mdwlist>

name	mdwlist
caption	Miscellaneous list-related commands
author	Wooding, Mark
copyright	Mark Wooding (1996)
license	gpl = GNU General Public License (free)
description	(no language specified) The mdwlist package provides: • a means of building description-like lists, to your specification, • a macro to generate a "compact" version of an existing list, and • a method of suspending and resuming a list, so as to interject some "body" text into a list (typically, an enumerated list). The package is part of the mdwtools bundle; it is superseded by enumitem, which is to be preferred for new work.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/mdwtools/mdwlist.pdf
– local file	<code>./3870855256-mdwlist.pdf</code>

3866 *mdwtools* – Miscellaneous tools by Mark Wooding

Web page on CTAN <https://ctan.org/pkg/mdwtools>

name *mdwtools*

caption Miscellaneous tools by Mark Wooding

author Wooding, Mark

license gpl = GNU General Public License (free)

version 1.05.4

description (no language specified) This collection of tools includes:

- support for short commands starting with @ ,
- macros to sanitise the OT1 encoding of the *cmmt* fonts ;
- a ‘do after’ command ;
- improved footnote support ;
- mathenv for various alignment in maths;
- list handling ;
- *mdwmath* which adds some minor changes to LaTeX maths;
- a rewrite of LaTeX’s *tabular* and *array* environments ;
- verbatim handling ; and
- syntax diagrams .

3869 *media4svg* – Multimedia inclusion for the dvisvgm backendWeb page on CTAN <https://ctan.org/pkg/media4svg>

name	media4svg
caption	Multimedia inclusion for the dvisvgm backend
author	Grahn, Alexander
copyright	Alexander Grahn (2020-2022)
license	lppl = The LaTeX Project Public License (free)

version	0.13 (2022-10-12)
last changes	2022-10-12
year	2022
description	(no language specified) This package implements an interface for embedding video and audio files in SVG (Scalable Vector Graphics) output. SVG with embedded media is very portable, as it is supported by all modern Web browsers across a variety of operating systems and platforms, including portable devices. All DVI producing TeX engines can be used. The dvisvgm utility, which is part of all major TeX distributions, converts the intermediate DVI to SVG. By default, media files are embedded into the SVG output to make self-sufficient SVG files.
documentation	(no language specified) <i>Example of use:</i> https://ctan.org/tex-archive/macros/latex/contrib/media4svg/example/beamer-example-1.svg

last changes	2024-09-16
year	2024
description	(no language specified) The package provides an interface to embed interactive Flash (SWF) and 3D objects (Adobe U3D & PRC), as well as video and sound files or streams in the popular MP4, FLV and MP3 formats into PDF documents with Acrobat-9/X compatibility. Playback of multimedia files uses the built-in Flash Player of Adobe Reader and does, therefore, not depend on external plug-ins. Flash Player supports the efficient H.264 codec for video compression. The package is based on the RichMedia Annotation, an Adobe addition to the PDF specification. It replaces the now obsolete movie15 package.

version	3.8.4b (2025-11-04)
last changes	2025-11-04
year	2025

description	(no language specified) The memoir class is for typesetting poetry, fiction, non-fiction, and mathematical works. Permissible document ‘base’ font sizes range from 9 to 60pt. There is a range of page-styles and well over a dozen chapter-styles to choose from, as well as methods for specifying your own layouts and designs. The class also provides the functionality of over thirty of the more popular packages, thus simplifying document sources. Users who wish to use the hyperref package, in a document written with the memoir class, should also use the memhfixc package (part of this bundle). Note, however, that any current version of hyperref actually loads the package automatically if it detects that it is running under memoir.

3885 *memoize* – Externalization of graphics and memoization of compilation results in generalWeb page on CTAN <https://ctan.org/pkg/memoize>

name	Memoize
caption	Externalization of graphics and memoization of compilation results in general
author	Živanović, Sašo
copyright	Saso Zivanovic (2020-2024)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.4.1 (2024-12-02)
last changes	2024-12-02
year	2024
description	(no language specified) Memoize is a package for externalization of graphics and memoization of compilation results in general, allowing the author to reuse the results of compilation-intensive code. Memoize (i) induces very little overhead, as all externalized graphics is produced in a single compilation. It features (ii) automatic recompilation upon the change of code or user-adjustable context, and (iii) automatic externalization of TikZ pictures and Forest trees, easily extensible to other commands and environments. Furthermore, Memoize (iv) supports cross-referencing, TikZ overlays and Beamer , (v) works with all major engines and formats, and (vi) is adaptable to any workflow.

3890 *mensa-tex* – Typeset simple school cafeteria menus

Web page on CTAN <https://ctan.org/pkg/mensa-tex>

name *mensa-tex*

caption Typeset simple school cafeteria menus

author Friedl, Sebastian

copyright Sebastian Friedl (2017)

license lpl1.3c = The LaTeX Project Public License 1.3c (free)

version (2017-12-03)

last changes 2017-12-03

year 2017

description (no language specified) This package provides a flexible LaTeX2e class for typesetting school cafeteria menus consisting of two lunches (with dessert), and dinner.

It supports two different layouts:

- The first layout is optimized for printing the menu on A4 paper.
- The second layout is optimized for smartphone screens and uses one (A6 sized) page per day.

Supported localizations are English (GB/US) and German. A way of defining additional localizations is described in the documentation.

The package requires [array](#) , [colortbl](#) , [datetime2](#) , [datetime2-calc](#) , [geometry](#) , [graphicx](#) , [lmodern](#) , [textcomp](#) , and [xcolor](#) .

3903 metacapture – A package for the capture of author-supplied metadata

Web page on CTAN <https://ctan.org/pkg/metacapture>

name	metacapture
caption	A package for the capture of author-supplied metadata
author	McCurley, Kevin
copyright	Joppe W. Bos and Kevin S. McCurley (2026)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.9.1
description	(no language specified) Curation and indexing of metadata is a crucial part of journal publishing. The <code>metacapture</code> package is one component in an open source workflow implementation that is designed to automate the production and copy editing of journal articles. It is used by the <code>iacrj</code> document class for the journal IACR CiC, but can also be used for other journals. It is intended primarily for use by LaTeX document class designers, but may also be useful for authors who may wish to change their document class in the future. When a document that loads <code>metacapture.sty</code> is compiled, it produces a YAML-like text file containing all metadata from the document. The <code>metacapture</code> package accomplishes this by providing replacements for the generic macros <code>\title</code>, <code>\author</code> and <code>\maketitle</code> macros that have traditionally been used by document classes. The <code>metacapture</code> package also provides several implementations of the <code>\maketitle</code> macro in different styles, partly as a way to demonstrate how to separate metadata capture from styling of front matter. Document class designers can also write their own

implementation of `\maketitle` with their preferred styling using the dictionary-like data structures used to hold author metadata.

The *metacapture* package is part of a larger set of tools for implementing a journal publishing workflow. There is also a companion open source implementation of a publishing workflow written in Python that is used for this journal and provides a simplified workflow for copy editing and production. Further information on this workflow can be found in two articles that were published by the authors:

- [Lowering the Cost of Diamond Open Access Journals](#) ,
- [A LaTeX publishing workflow](#)

3904 metafont – A system for specifying fonts

Web page on CTAN <https://ctan.org/pkg/metafont>

Alias	Metafont
name	Metafont
caption	A system for specifying fonts
author	Knuth, Donald E.
copyright	D. E. Knuth (null)
license	knuth = Knuth License (free)
version	2.71828182 (2021-02-05)
last changes	2021-02-05
year	2021
description	(no language specified) The program takes a programmatic specification of a font, and produces a bitmap font (whose properties are defined by a set of parameters of the target device), and metrics for use by TeX . The bitmap output may be converted into a format directly usable by a device driver, etc., by the tools provided in the parallel mfware distribution. Third parties have developed tools to convert the bitmap output to outline fonts. The distribution includes the source of Knuth's <i>Metafont book</i> ; this source is there to read, as an example of writing TeX — it should not be processed without Knuth's direct permission. The mailing list <code>tex-fonts@math.utah.edu</code> is the best for general discussion of Metafont usage; the <code>tex-k@tug.org</code> list is best for bug reports about building the software, etc.

description (no language specified) metanorma

This work includes a LaTeX document class, a 'latexml' script and a 'latexmlpost' stylesheet which allow you to write a LaTeX document and transcode it into Metanorma's 'ADOC' format.

This work is sponsored by Ribose Inc. (<<https://www.ribose.com>>).

This work is maintained by Ribose Inc. (<open.source@ribose.com>).

3912 *metaobj* – *MetaPost* package providing high-level objects

Web page on CTAN <https://ctan.org/pkg/metaobj>

name	metaobj
caption	MetaPost package providing high-level objects
author	Roegel, Denis B.
license	lppl = The LaTeX Project Public License (free)
version	0.93
description	(no language specified) METAOBJ is a large MetaPost package providing high-level objects. It implements many of PSTricks' features for node connections, but also trees, matrices, and many other things. It more or less contains boxes.mp and rboxes.mp. There is a large (albeit not complete) documentation distributed with the package. It is easily extensible with new objects.

3914 metaplot – Plot-manipulation macros for use in MetaPostWeb page on CTAN <https://ctan.org/pkg/metaplot>

name	MetaPlot
caption	Plot-manipulation macros for use in MetaPost
author	Moses, Brooks
license	lppl = The LaTeX Project Public License (free)
version	0.91
description	(no language specified) MetaPlot is a set of MetaPost macros for manipulating pre-generated plots (and similar objects), and formatting them for inclusion in a MetaPost figure. The intent is that the plots can be generated by some outside program, in an abstract manner that does not require making decisions about on-page sizing and layout, and then they can be imported into MetaPlot and arranged using the full capabilities of MetaPost. Metaplot also includes a very flexible set of macros for generating plot axes, which may be useful in other contexts as well. Presently, MetaPlot is in something of a pre-release beta state; it is quite functional, but the syntax of the commands is still potentially in flux.

3918 *metapost-matlab* – MetaPost data plotting in Matlab style

Web page on CTAN <https://ctan.org/pkg/metapost-matlab>

name	metapost-matlab
caption	MetaPost data plotting in Matlab style
author	Yang, Yang
license	lppl = The LaTeX Project Public License (free)
description	(no language specified) Matlab has powerful data plotting ability, but one annoying problem prevents it from being perfect: when you increase the linewidth, the dotted line size stays the same, so the plotted line no longer looks like a dotted line. Another problem is Matlab's bugs: it often cuts away some curves and captions. And, of course, Matlab is expensive. On the other hand, the free Gnuplot doesn't produce very satisfactory visual effects either. The author got accustomed to Matlab's easy interface, and wanted to integrate the powerful graphic functions of MetaPost with the interface of Matlab. The outcome was matlab.mp. It is based on graph.mp (part of the MetaPost distribution). The package collects data into 2D arrays, and remembers the line styles, so it's easy to plot out legends. The package features: – All kinds of line colour, width, style (dotted/dashed, etc), and markers (the code may easily be expanded); – Easy interface, very similar to Matlab; – The full power of LaTeX is available in captions and legends, by using the latexmp package.

3924 metre – Support for the work of classicists

Web page on CTAN <https://ctan.org/pkg/metre>

name `metre`

caption Support for the work of classicists

author Boggio-Togna, Gianfranco

copyright Gianfranco Boggio-Togna (2000, 2001)

license lppl = The LaTeX Project Public License (free)

version 1.0

description (no language specified) The package provides classicists with some of the tools that are needed for typesetting scholarly publications dealing with Greek and Latin texts, with special emphasis on Greek verse.

As the package's name suggests, its core is a comprehensive set of commands for generating metrical schemes and for placing prosodical marks on text set in the Latin or the Greek alphabet. The rest of the package provides a miscellany of commands for symbols (most of them not directly related to metre) that are often used in critical editions of classical texts.

The package does not require any special font: all symbols are taken from the Computer Modern fonts (which are included in all TeX distributions) and the package's commands are based on TeX primitives.

3926 *met symb* – The package provides dedicated TeX commands to generate (vectorial) meteorological symbols

Web page on CTAN <https://ctan.org/pkg/metsymb>

name	<code>met symb</code>
caption	The package provides dedicated TeX commands to generate (vectorial) meteorological symbols
author	Vogt, Frédéric P.A.
copyright	MeteoSwiss (2021-2023)
license	bsd3 = 3-clause BSD License (free)
version	1.2.0
description	(no language specified) The <i>met symb</i> package introduces commands to generate official meteorological symbols with vectorial quality. These include: <code>oktas</code> (<code>\zerookta</code>, <code>\oneokta</code>, <code>\twooktas</code>, <code>\ldots</code>), cloud genera (<code>\cirrus</code>, <code>\cirrostratus</code>, <code>\nimbostratus</code>, ...), and <code>C_L</code> / <code>C_M</code> / <code>C_H</code> cloud codes (<code>\clIII</code>, <code>\cmVI</code>, <code>\chIX</code>, ...). Individual symbols are designed using TikZ. They are then bundled into a dedicated font with FontForge, and eventually tied to dedicted LaTeX commands. The <i>met symb</i> OpenType font is a side-product that can be used on its own. This package essentially introduces a new font in which each symbol is assigned to a glyph, which can then be called individually from LaTeX documents via dedicated commands.

3930 *mf2ps* – Modification of Metafont to produce PostScript output

Web page on CTAN <https://ctan.org/pkg/mf2ps>

name	<code>mf2ps</code>
caption	Modification of Metafont to produce PostScript output
author	Berry, Daniel
author	Yanai, Shimon
license	<code>noinfo = noinfo</code>
version	(1993-02-18)
last changes	1993-02-18
year	1993

description	(no language specified) The system describes Pascal source modifications to Metafont (version 1.7 or earlier) for it to produce fonts specified in PostScript. The work was undertaken before Adobe published the specification of its Type 1 format, so that the fonts thus produced are bulky and relatively inefficient, in modern terms.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/fonts/utilities/mf2ps/READ.ME

3931 *mf2pt1* – Convert stylized Metafont to PostScript Type 1

Web page on CTAN	https://ctan.org/pkg/mf2pt1
name	<code>mf2pt1</code>
caption	Convert stylized Metafont to PostScript Type 1
author	Pakin, Scott
copyright	Scott Pakin (2005-2024)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.8
description	(no language specified) <code>mf2pt1</code> is a Perl script that facilitates producing PostScript Type 1 fonts from a Metafont source file. It is not, as the name may imply, an automatic converter of arbitrary Metafont fonts to Type 1 format. <code>mf2pt1</code> imposes a number of restrictions on the Metafont input. If these restrictions are met, <code>mf2pt1</code> will produce valid Type 1 output with more accurate control points than can be reverse-engineered by TeXtrace, mftrace , and other programs which convert bitmaps to outline fonts.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/support/mf2pt1/README
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/support/mf2pt1/mf2pt1.pdf

3943 mfpic – Draw Metafont/post pictures from (La)TeX commands

Web page on CTAN	https://ctan.org/pkg/mfpic
name	mfpic
caption	Draw Metafont/post pictures from (La)TeX commands
author	Luecking, Daniel H.
author	Tobin, Geoffrey
copyright	Daniel H. Luecking (2002-2009)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)

version	1.10
description	(no language specified) Mfpic is a scheme for producing pictures from (La)TeX commands. Commands <code>\mfpic</code> and <code>\endmfpic</code> (in LaTeX, the <code>mfpic</code> environment) enclose a group in which drawing commands may be placed. The commands generate a Meta-language file, which may be processed by MetaPost (or even Metafont). The resulting image file will be read back in to the document to place the picture at the point where the original (La)TeX commands appeared. Note that the ability to use MetaPost here means that the package works equally well in LaTeX and pdfLaTeX.

name	MFwL
caption	Making friends with LaTeX
author	Kumar, Rohit Vishal
copyright	Rohit Vishal Kumar (2006)
license	gpl = GNU General Public License (free)
version	2.00
description	(no language specified) "Making Friends with LaTeX" (MFwL) is a small presentation which the author uses to introduce LaTeX to his students. It is made using the Prosper Package. The objective of MFwL is to introduce newcomers to LaTeX and make them aware of various aspects of working with LaTeX. It covers: (i) LaTeX Advocacy (ii) LaTeX Document Structure (iii) Paragraph Mode and Math Mode (iv) Structuring the document (v) Creating Tables, Graphics (in very short) (vi) BibTeX (vii) Recommendations for a LaTeX system (viii) References for further reading Its objective is not to make a person expert in using LaTeX but to get the person interested in LaTeX by making him understand the LaTeX way of working. The intention is that once the person is comfortable with the idea s/he can then explore the wonders of LaTeX on his/her own pace.

 copyright Alexey Balakin and Diego Sejas Viscarra (2014-2016)
 license cc-by-sa-3 = CC BY-SA 3.0 (free)
 license gpl3 = GNU General Public License, version 3 (free)
 version 4.2 (2016-04-26)
 last changes 2016-04-26
 year 2016
 description (no language specified) This package allows you to create high-quality publication-ready graphics directly from MGL scripts embedded into your LaTeX document, using the [MathGL library](#) .
 Besides following the LaTeX philosophy of allowing you to concentrate on content rather than output (`mglTeX` takes care of producing the output), `mglTeX` facilitates the maintenance of your document, since both code for text and code for plots are contained in a single file.
[MathGL](#) . is a fast and efficient library by Alexey Balakin for the creation of high-quality publication-ready scientific graphics. Although it defines interfaces for many programming languages, it also implements its own scripting language, called MGL, which can be used independently.

3950 *mh* – Stub for the (old) ‘mh’ bundle

Web page on CTAN <https://ctan.org/pkg/mh>

name	mh
caption	Stub for the (old) ‘mh’ bundle
author	Wright, Joseph
author	Høgholm, Morten
author	Madsen, Lars
author	Robertson, Will
copyright	Morten Høgholm (2002-2010)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	(2014-08-06)
last changes	2014-08-06
year	2014
description	(no language specified) The mh bundle was a series of packages to enhance the appearance of documents containing a lot of maths; the package were designed to support and extend the LaTeX <i>required</i> amsmath The packages (no longer distributed as a bundle) comprise: • breqn , which enables automatic line-breaking in displayed equations; • empheq , which provides various mechanisms for ‘visual markup’ of mathematical matter; • flexisym , which converts symbol definitions to a form usable within breqn ;

- **mathstyle** , which takes advantage of LaTeX’s suppression of some of TeX’s maths operators, to improve the performance of sub- and superscripts, and other aspects of mathematical typesetting style, including the ever-tricky `\mathchoice` operator;
- **mathtools** , providing a range of extensions to maths as a whole; and
- **mhsetup** , which provides various programming tools for other packages of the set.

3951 *mhack* – Macros for marginal notes, in Plain TeX

Web page on CTAN <https://ctan.org/pkg/mhack>

name *mhack*
 caption Macros for marginal notes, in Plain TeX
 author Walsh, Norman
 license noinfo = noinfo
 version (1991-09-27)
 last changes 1991-09-27
 year 1991
 description (no language specified) These macros present two macros for inserting marginal notes.

The first (`\ihack`) uses an insert to build a margin-full of notes, starting at the top of the page; the macro requires changes to the output routine.

The other macro (`\vhack`) just `\vadjust`s each note to the horizontal position where it starts; this requires no change to the output routine, but provides no protection against notes colliding with each other.

 on CTAN <https://ctan.org/tex-archive/macros/plain/contrib/misc/mhack.tex>
 keyword notes (general notes (not including endnotes or footnotes))
 language(s) no language specified

3952 *mhchem* – Typeset chemical formulae/equations and H and P statements

Web page on CTAN <https://ctan.org/pkg/mhchem>

name	mhchem
caption	Typeset chemical formulae/equations and H and P statements
author	Hensel, Martin
copyright	Martin Hensel (2004-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	(2024-01-29)
last changes	2024-01-29
year	2024
description	(no language specified) The bundle provides three packages: The <code>mhchem</code> package provides commands for typesetting chemical molecular formulae and equations. The <code>hpstatement</code> package provides commands for the official hazard statements and precautionary statements (H and P statements) that are used to label chemicals. The <code>rsphrase</code> package provides commands for the official Risk and Safety (R and S) Phrases that are used to label chemicals. The package requires the expl3 bundle.

3953 mhequ – Multicolumn equations, tags, labels, sub-numbering

Web page on CTAN <https://ctan.org/pkg/mhequ>

name	mhequ
caption	Multicolumn equations, tags, labels, sub-numbering
author	Hairer, Martin
copyright	Martin Hairer (2000, 2005, 2015, 2022)
license	pd = Public Domain Software (free)
version	1.72
description	(no language specified) The <code>mhequ</code> style file simplifies creating multi-column equation environments and tagging equations therein. It supports sub-numbering of blocks of equations (like (1.2a), (1.2b), etc) and references to each equation individually (1.2a) or to the whole block (1.2). The labels can be shown in draft mode. The default behaviour is to show an equation number if and only if the equation actually has a label, which reduces visual clutter. Comments in the package itself describe its usage, which should also be self-evident from the provided example file.

license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.4 (2021-03-18)
last changes	2021-03-18

year	2021
description	(no language specified) Mhsetup is part of the mathtools bundle, which provides a series of packages designed to enhance the appearance of documents containing a lot of mathematics. The main backbone is amsmath, so those unfamiliar with this required part of the LaTeX system will probably not find the packages very useful. The mhsetup package defines various programming tools needed by both empheq and mathtools. In the future, most of these tools will probably be an integral part of LaTeX3.

3959 *microtype* – Subliminal refinements towards typographical perfection

Web page on CTAN <https://ctan.org/pkg/microtype>

name	microtype
caption	Subliminal refinements towards typographical perfection
author	Schlicht, Robert
copyright	Robert Schlicht (2004-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	3.2 (2024-12-12)
last changes	2024-12-12
year	2024
description	(no language specified) The package provides a LaTeX interface to the micro-typographic extensions that were introduced by pdfTeX and have since also propagated to XeTeX and LuaTeX: most prominently, character protrusion and font expansion, furthermore the adjustment of interword spacing and additional kerning, as well as hyphenatable letterspacing (tracking) and the possibility to disable all or selected ligatures. These features may be applied to customisable sets of fonts, and all micro-typographic aspects of the fonts can be configured in a straight-forward and flexible way. Settings for various fonts are provided.

Note that character protrusion requires pdfTeX, LuaTeX, or XeTeX. Font expansion works with pdfTeX or LuaTeX. The package will by default enable protrusion and expansion if they can safely be assumed to work. Disabling ligatures requires pdfTeX or LuaTeX, while the adjustment of interword spacing and of kerning only works with pdfTeX. Letterspacing is available with pdfTeX or LuaTeX.

The alternative package ‘letterspace’, which also works with plain TeX, provides the user commands for letterspacing only, omitting support for all other extensions.

3966 miktex – A free TeX distribution for MS-WindowsWeb page on CTAN <https://ctan.org/pkg/miktex>

name	miktex
caption	A free TeX distribution for MS-Windows
author	Schenk, Christian
license	other-free = Free license not otherwise listed (free)
version	24.12
description	(no language specified) A distribution of TeX and friends for Windows 2000, XP, Vista and Windows 7, as well as Windows Server 2003 and 2008. Features include easy installation and configuration, and full TeX, LaTeX and ConTeXt support. MiKTeX includes a set of "canned" distributions, up to installation of 'everything there is'. Users may update their installation manually, or they can allow MiKTeX to install new stuff automatically (as needed), from the net. A command-line utility, 'texify', simplifies the production of DVI (or PDF) documents by automatically invoking LaTeX (pdfLaTeX), Makeindex, and BibTeX as many times as necessary to produce a DVI (PDF) file with sorted indices and all cross-references resolved. A "portable" distribution is available, for users to carry in their pocket... Users of MiKTeX commonly control their work with an editor/shell; many are available, such as the free texniccenter and the shareware winedt.

3973 *milog* – A LaTeX class for fulfilling the documentation duties according to the German minimum wage law MiLoG

Web page on CTAN <https://ctan.org/pkg/milog>

name	<i>milog</i>
caption	A LaTeX class for fulfilling the documentation duties according to the German minimum wage law MiLoG
author	Kleber, Josef
copyright	Josef Kleber (2016)
license	lppl = The LaTeX Project Public License (free)
version	1.0
description	(no language specified) Seit dem 1. Januar 2015 gilt in Deutschland grundsätzlich für alle Arbeitnehmer ein flächendeckender gesetzlicher Mindestlohn in Höhe von derzeit 8,50€ pro Stunde. Mit Wirkung ab 1. August 2015 wurden die Dokumentations- und Aufzeichnungspflichten gelockert. Nach §17 MiLoG, muss Beginn, Ende und Dauer der täglichen Arbeitszeit der in §22 MiLoG definierten Arbeitnehmern (formlos) aufgezeichnet werden. Zusätzlich ermöglicht <i>milog.cls</i> aus praktischen Gründen die Aufzeichnung von unbezahlten Pausen und Bemerkungen (Ruhetag, Urlaub, krank, ...). Die Erfassung der Arbeitszeiten erfolgt in einer simplen CSV-Datei, aus der die Klasse automatisch einen Arbeitszeitschein erstellt. Alternativ können die Daten auch durch einen CSV-Export – mit eventueller Nachbearbeitung – einer geeigneten App erhoben werden. The <i>milog.cls</i> class provides means to fulfill the documentation duties by the German minimum wage law MiLoG. The recording of working hours is carried out in a simple CSV file from which the class will automatically create a time sheet. Alternatively, data can also be collected by a CSV export of a suitable app.

3976 *mimetex* – Parse LaTeX math expressions and emit gif or xbitmaps

Web page on CTAN <https://ctan.org/pkg/mimetex>

name *mimetex*
 caption Parse LaTeX math expressions and emit gif or xbitmaps
 author Forkosh, John
 copyright John Forkosh Associates (2002-2012)
 license gpl = GNU General Public License (free)
 version 1.74 (2012-03-31)
 last changes 2012-03-31
 year 2012
 description (no language specified) MimeTeX parses LaTeX mathematics expressions, emitting either gif images or mime xbitmaps of them, rather than the usual TeX DVI files. MimeTeX images are therefore easily inserted directly into html documents using a standard html img tag without intermediate dvi-to-gif conversion, and without storing lots of little gif image files, one file for each converted expression. This makes your web site and html documents more easily maintained. See [the mimetex web site](#) for many examples demonstrating mimeTeX's features and usage.

3982 minim – A modern plain format for the LuaTeX engine

Web page on CTAN <https://ctan.org/pkg/minim>

name	minim
caption	A modern plain format for the LuaTeX engine
author	Renkema, Esger
copyright	Esger Renkema, Michal Vlasák (2022)
license	eupl = European Union Public License 1.2 (free)
version	2025/1.7

description	(no language specified) This is a modern plain format for the LuaTeX engine, adding improved low-level support for many LuaTeX extensions and newer PDF features. While it can be used as drop-in replacement for plain TeX, it probably is most useful as a basis for your own formats. Most features included in the format are provided by separate packages that can be used on their own; see the packages • minim-mp for mplib (MetaPost) support • minim-math for unicode mathematics • minim-pdf for creating Tagged PDF • minim-xmp for XMP (metadata) inclusion This package contains only their shared lowest-level programming interface, along with their combined format.

version	(2025-10-21)
last changes	2025-10-21
year	2025

description	(no language specified) This package offers you a LaTeX style file and two classes to typeset articles or books in a simple and clear way. These classes currently have native support for English, French, German, Italian, Portuguese (European and Brazilian), and Spanish typesetting. They compile with any major TeX engine. You may also wish to consider the packages <code>einfort</code> and <code>simplivre</code>, which are enhanced versions of the classes provided here. They have unicode support, thus can only be used with either XeLaTeX or LuaLaTeX. Currently they have native support for Chinese (both simplified and traditional), English, French, German, Italian, Japanese, Portuguese (European and Brazilian), Russian and Spanish typesetting, and also use more beautiful fonts.

3991 *minionpro* – LaTeX support for Adobe MinionPro fonts

Web page on CTAN <https://ctan.org/pkg/minionpro>

name	minionpro
caption	LaTeX support for Adobe MinionPro fonts
author	Blumensath, Achim
license	pd = Public Domain Software (free)
version	2.1

description	(no language specified) This package provides support for the Minion Pro fonts from Adobe. (Note that the font family itself is only available under commercial terms from Adobe.) The package offers access to a wide range of encodings and variants, including greek, cyrillic, four figure versions, and maths alphabets. The base font is the Open Type version of Minion Pro; scripts are provided to convert the Open Type to Adobe Type 1 format. (Minion Pro is commercially available, and copies are bundled with Acrobat Reader.) The font is <i>not</i> bundled with this package. By default, the package sets up Minion-based maths alphabets, and uses such symbols as are available in Minion, in maths mode. A complementary set of symbols is provided by the MnSymbol fonts and package.

3992 minipage-marginpar – Minipages with marginal notes

Web page on CTAN <https://ctan.org/pkg/minipage-marginpar>

name	<code>minipage-marginpar</code>
caption	Minipages with marginal notes
author	Ebermann, Paul
license	lppl = The LaTeX Project Public License (free)
version	0.2

3993 *miniplot* – A package for easy figure arrangement

description	(no language specified) This package allows <code>\marginpar</code> -commands inside of <code>minipages</code> and other boxes. (It takes another approach than <code>marginnote</code> by Markus Kohm: it saves all <code>\marginpar</code> -commands and typesets them outside (i.e., after) the box.) The package defines an environment <code>minipagewithmarginpars</code> (to be used like <code>minipage</code>)—and the internal commands may be used by other packages to define similar environments or commands.
documentation	(no language specified) <i>README file</i> : https://ctan.org/tex-archive/macros/latex/contrib/minipage-marginpar/README

3993 *miniplot* – A package for easy figure arrangement

Web page on CTAN	https://ctan.org/pkg/miniplot
name	MiniPlot
caption	A package for easy figure arrangement
author	Wahl, Tobias
license	lppl = The LaTeX Project Public License (free)

description	(no language specified) MiniPlot is a package to help the LaTeX user typeset EPS figures using an easy-to-use interface. Figures can be arranged as one-figure-only or as a collection of figures in columns and rows which can itself contain sub-figures in columns and rows. Wrapped figures are also supported. This package provides commands to display a framebox instead of the figure as the graphics package does already but additionally it writes useful information such as the label and scaling factor into these boxes.

3994 *minitoc* – Produce a table of contents for each chapter, part or section

Web page on CTAN <https://ctan.org/pkg/minitoc>

name	minitoc
caption	Produce a table of contents for each chapter, part or section
author	Drucbert, Jean-Pierre
copyright	Jean-Pierre F. Drucbert (1993-2008)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	62
description	(no language specified) The minitoc package allows you to add mini-tables-of-contents (minitocs) at the beginning of every chapter, part or section. There is also provision for mini-lists of figures and of tables. At the part level, they are parttocs, partlofs and partlots. If the type of document does not use chapters, the basic provision is section level secttocs, sectlofs and sectlots. The package has provision for language-specific configuration of its own "fixed names", using .mld files (analogous to <i>babel</i> .ldf files that do that job for LaTeX's own fixed names).

Web page on CTAN	https://ctan.org/pkg/missaali
name	<code>missaali</code>
caption	A late medieval OpenType textura font
author	Syrjänen, Tommi
copyright	Tommi Syrjänen (2016)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
license	ofl = The SIL Open Font License (free)
version	2.0

description	(no language specified) This package contains the free OpenType Textura font Missaali and a style file for using it with XeLaTeX. Textura is a typeface based on the textus quadratus form of the textualis formata that late medieval scribes used for the most valuable manuscripts. The font Missaali is based on Textura that German printer Bartholomew Ghotan used for printing missals and psalters in the 1480s. This font has two intended use cases: • as a Gothic display font; and • for emulating late-medieval manuscripts. In addition to the basic textura letters, the font contains a large number of abbreviation sigla as well as a set of Lombardic initials. As modern typesetting algorithms are not intended for creating 15th century style layout, the package contains a XeLaTeX style file that makes it easier to achieve the classic incunabula look.

4009 *mkpattern* – A utility for making hyphenation patterns

Web page on CTAN <https://ctan.org/pkg/mkpattern>

name	<code>mkpattern</code>
caption	A utility for making hyphenation patterns
author	Música de Rivera, Javier
copyright	Javier A. Música (2006, 2007)
license	lppl = The LaTeX Project Public License (free)
version	1.2
description	(no language specified) Mkpattern is a general purpose program for the generation of hyphenation patterns, with definition of letter sets and template-like constructions. It also provides an easy way to handle different input and output encodings, and features generation of clean UTF-8 patterns. The package was used for the creation of the Galician patterns .

4010 `mkpic` – Perl interface to `mfpic`

Web page on CTAN	https://ctan.org/pkg/mkpic
name	<code>mkpic</code>
caption	Perl interface to <code>mfpic</code>
author	Dekker, Wybo H.
license	gpl = GNU General Public License (free)
version	1.02
description	(no language specified) <code>mkpic</code> provides an easy interface for making small pictures with <code>mfpic</code> . To this end you create an input file consisting of commands, one per line, with space separated parameters (or you modify the DATA section of the <code>mkpic</code> script, which is used if you run it without an input file). For an extensive description see the file <code>mkpicdoc.pdf</code> , which is part of the distribution.

4020 *mlmath* – Mathematical notation for Machine LearningWeb page on CTAN <https://ctan.org/pkg/mlmath>

name	MLMath
caption	Mathematical notation for Machine Learning
author	Ma, Zheng
copyright	Zheng Ma, Zhiqin Xu, Tao Luo and Yaoyu Zhang (2020)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0.0
description	(no language specified) This package introduces a suggestion of a mathematical notation protocol for machine learning. The field of machine learning has been evolving rapidly in recent years. Communication between different researchers and research groups becomes increasingly important. A key challenge for communication arises from inconsistent notation usages among different papers. This proposal suggests a standard for commonly used mathematical notation for machine learning.

description	(no language specified) This package provides a template class for solving weekly exercises at the Institute for Computer Science of Martin Luther University Halle-Wittenberg. The class can be used by all students—especially first semesters—to typeset their exercises with low effort in beautiful LaTeX. A bunch of handy macros are included that are used throughout many lectures during the bachelor’s degree program. The class is maintained by the students’ council of the university. The focus is on encouraging first semester students to use LaTeX for typesetting, thus the package has been kept as simple as possible.

4035 mnsymbol – Mathematical symbol font for Adobe MinionPro

Web page on CTAN <https://ctan.org/pkg/mnsymbol>

name	MnSymbol
caption	Mathematical symbol font for Adobe MinionPro
author	Blumensath, Achim
license	pd = Public Domain Software (free)
version	1.4
description	(no language specified) MnSymbol is a symbol font family, designed to be used in conjunction with Adobe Minion Pro (via the MinionPro package). Almost all of LaTeX and AMS mathematical symbols are provided; remaining coverage is available from the MinionPro font with the MinionPro package. The fonts are available both as Metafont source and as Adobe Type 1 format, and a comprehensive support package is provided. While the fonts were designed to fit with Minion Pro, the design should fit well with other renaissance or baroque faces: indeed, it will probably work with most fonts that are neither too wide nor too thin, for example Palatino or Times; it is known to look good with Sabon. There is no package designed to configure its use with any font other than Minion Pro, but (for example) simply loading mnsymbol after mathpazo will probably do what is needed.

4036 *mnttex* – Tools for the "The Secret History of the Mongols"Web page on CTAN <https://ctan.org/pkg/mnttex>

name	<i>mnttex</i>
caption	Tools for the "The Secret History of the Mongols"
author	Corff, Oliver
license	lppl = The LaTeX Project Public License (free)
version	0.3
description	(no language specified) The Secret History of the Mongols (Monggol-un niguca tobciyan→MNT) is the oldest work of Mongolian literature surviving today. Though the language of the text is Middle Mongolian, the text was written entirely in Chinese characters which were used to render Mongolian phonetically. Modern tools for typing, editing and typesetting Chinese do not easily lend themselves for preparing research documentation due to peculiarities of the historical source. The MNTTeX package assists the scholar typesetting the complex Chinese material by accessing all characters either by number or pronunciation as well as offering convenient access to small or combined characters. The MNTTeX package relies on an existing environment for processing Chinese characters and assumes that the package CJK is installed. It is further required to have a recent inputenc package with ucs support from the unicode package. Without these, MNTTeX is not likely to work. Furthermore it is required to use the font zysong.ttf or a similar font in Song style. Since not all characters used in the MNT are provided by modern fonts they had to be made for this package. Being closely modelled according to Song style, these especially made characters would stand out in stark contrast from e.g. Kaiti style character sets. Limited in number, these individual characters were coded as scalable vector images, rather than as font. No difference between these characters and ordinary characters can be perceived in print even though the on-screen display may appear hardly intelligible.

4041 **modernruler** – Flexible ruler and annotation commands with key-value support and vertical writing compatibility

Web page on CTAN <https://ctan.org/pkg/modernruler>

name	<code>modernruler</code>
caption	Flexible ruler and annotation commands with key-value support and vertical writing compatibility
author	KKTeX
copyright	Kosei Kawaguchi (2025-2026)
license	mit = MIT License (free)
version	2.1.6 (2026-02-07)
last changes	2026-02-07
year	2026

description	(no language specified) This package provides a versatile set of commands for drawing rules and creating annotations in LaTeX. While standard LaTeX rules can be rigid, this package introduces more flexible alternatives: <code>\mruleth</code> (horizontal rules), <code>\mruletv</code> (vertical rules), and <code>\undernote</code> (underlined annotations). Key Features: • Key-Value Interface: All commands support a consistent key-value syntax for adjust dimensions (width, height, depth), colors, and dash patterns (dash, dash-len, gap-len). • Underline Annotations: The <code>\undernote</code> command allows users to attach descriptive notes to underlined text. It automatically handles positioning, spacing between multiple notes, and provides options for various border styles (solid or dashed boxes). • Vertical Writing Compatibility: Designed with multilingual typesetting in mind, the package is compatible with vertical writing modes, ensuring that rules and notes are oriented correctly. • Customization: Users can update package-wide defaults at any point in the document using a dedicated set of <code>\SetUNote...</code> commands.

4049 *modulus* – A non-destructive modulus and integer quotient operator for TeXWeb page on CTAN <https://ctan.org/pkg/modulus>

name	<code>modulus</code>
caption	A non-destructive modulus and integer quotient operator for TeX
author	Goodman, Donald P.
copyright	Donald P. Goodman (2018)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0
description	(no language specified) The package provides an easy way to take the remainder of a division operation without destroying the values of the counters containing the dividend and divisor. Also provides a way to take the integer quotient of a division operation without destroying the values of the counters containing the dividend and divisor. A tiny but occasionally useful package, when doing heavy TeX programming.

4050 *mohe-book* – Typeset authored, translated, and research books according to mohe rules

Web page on CTAN <https://ctan.org/pkg/mohe-book>

name	mohe-book
caption	Typeset authored, translated, and research books according to mohe rules
author	Nabavi, Amanullah
copyright	Amanullah Nabavi (2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0.0 (2025-01-01)
last changes	2025-01-01
year	2025
description	(no language specified) The mohe-book LaTeX class is a specialized template designed to streamline the typesetting of academic and educational materials, including authored textbooks, translated works, research publications, and course materials. Tailored for faculty members and academic staff in Afghanistan, it adheres to rigorous scholarly standards while offering customizable layouts for bilingual (e.g., Dari-English) or multilingual content. Key features include preconfigured chapter/section styles, support for complex scripts, and templates for front matter (prefaces, dedications) and back matter (bibliographies, indices). The package aims to simplify the creation of professional-grade academic documents, ensuring consistency and compliance with institutional or regional publishing guidelines.

4058 *montex* – Mongolian LaTeX

Web page on CTAN <https://ctan.org/pkg/montex>

name *montex*

caption Mongolian LaTeX

author Corff, Oliver

license gpl = GNU General Public License (free)

version IVu.04.092

description (no language specified) MonTeX provides Mongolian and Manju support for the TeX/LaTeX community.

Mongolian is a language spoken in North East Asia, namely Mongolia and the Inner Mongol Autonomous Region of China. Today, it is written in an extended Cyrillic alphabet in Mongolia whereas the Uighur writing continues to be in use in Inner Mongolia, though it is also, legally speaking, the official writing system of Mongolia.

Manju is another language of North East Asia, belonging to the Tungusic branch of the Altaic languages. Though it is hardly spoken nowadays, it survives in written form as Manju was the native language of the rulers of the Qing dynasty (1644–1911) in China. Large quantities of documents of the Imperial Archives survive, as well as some of the finest dictionaries ever compiled in Asia, like the Pentaglot, a dictionary comprising Manju, Tibetan, Mongolian, Uighur and Chinese. MonTeX provides all necessary characters for writing standard Mongolian in Cyrillic and Classical (aka Traditional or Uighur) writing, and Manju as well as transliterated Tibetan texts, for which purpose a number of additional characters was created.

In MonTeX, both Mongolian and Manju are entered in romanized form. The retransliteration (from Latin input to Mongolian and Manju output) is completely realized in TeX/Metafont so that no external preprocessor is required.

Please note that most of the enhanced functions of MonTeX require a working e-LaTeX environment. This is especially true when compiling documents with Mongolian or Manju as the main document language. It is recommended to choose pdfelatex as the resulting PDF files are truly portable. Vertical text generated by MonTeX is not supported in DVI.

4059 *montserrat* – *Montserrat sans serif, otf and pfb, with LaTeX support files*

Web page on CTAN <https://ctan.org/pkg/montserrat>

name	montserrat
caption	Montserrat sans serif, otf and pfb, with LaTeX support files
author	Sharpe, Michael
copyright	Michael Sharpe (2017-2019)
copyright	The Montserrat Project Authors (2011-2016)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
license	ofl = The SIL Open Font License (free)
version	1.03
description	(no language specified) Montserrat is a geometric sans-serif typeface designed by Julieta Ulanovsky, inspired by posters and signage from her historical Buenos Aires neighborhood of the same name. It is rather close in spirit to Gotham and Proxima Nova, but has its own individual appearance — more informal, less extended, and more idiosyncratic. It is provided in a total of nine different weights, each having eight figure styles and small caps in both upright and italic shapes. There are two quite different versions that don't fit into the usual LaTeX classifications. The version having the appellation "Alternates" has letter shapes that are much more rounded than the default version, reflecting the signage in the neighborhood of Montserrat.

4063 moreenum – More enumeration options

Web page on CTAN <https://ctan.org/pkg/moreenum>

name	moreenum
caption	More enumeration options
author	Bradley, Seamus
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.03
description	(no language specified) The package provides the following new enumerate styles: • <code>\greek</code> for lowercase Greek letters; • <code>\Greek</code> for uppercase Greek letters; • <code>\enumHex</code> for uppercase hexadecimal enumeration; • <code>\enumhex</code> for lowercase hexadecimal enumeration; • <code>\enumbinary</code> for binary enumeration; • <code>\enumoctal</code> for octal enumeration; • <code>\levelnth</code> for "1st", "2nd", "3rd" etc., with the "nth"s on the baseline; • <code>raisenth</code> for "1st", "2nd", "3rd" etc., with the "nth"s raised; • <code>\nthwords</code> for "first", "second", "third" etc.; • <code>\Nthwords</code> for "First", "Second", "Third" etc.; • <code>\NTHWORDS</code> for "FIRST", "SECOND", "THIRD" etc.; • <code>\nwords</code> for "one", "two", "three" etc.; • <code>\Nwords</code> for "One", "Two", "Three" etc.; and • <code>\NWORDS</code> for "ONE", "TWO", "THREE" etc.

Each of these works with `enumitem`'s "starred variant" feature. So `\begin{enumerate}[label=\enumhex*]` will output a hex enumerated list. Enumitem provides a `start=0` option for starting your enumerations at 0.

The package requires `amsmath`, `alphalph`, `enumitem` (of course), `binhex` and `nth`, all of which are widely available.

Web page on CTAN	https://ctan.org/pkg/morefloats
name	<code>morefloats</code>
caption	Increase the number of simultaneous LaTeX floats
author	Hosek, Don
author	Münch, Hans-Martin
copyright	H.-Martin Münch (2010-2025)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1a (2025-02-28)
last changes	2025-02-28
year	2025
description	(no language specified) LaTeX can, by default, only cope with 18 outstanding floats; any more, and you get the error "too many unprocessed floats". This package releases the limit; TeX itself imposes limits (which are independent of the help offered by e-TeX). However, if your floats can't be placed anywhere, extending the number of floats merely delays the arrival of the inevitable error message.

last changes	2024-08-20
year	2024
description	(no language specified) This package provides several document level commands to ease typesetting of maths with LaTeX. This package provides complementary commands to all operators defined by amsmath which typeset the operators together with delimiters (which can be scaled manually, automatically or not at all). These commands also accept optional sub- and superscripts. Additionally, this package provides several commands to typeset gradient, divergence, curl, Laplace, and d'Alembert operators. Those commands also accept an optional subscript and their appearance can be modified using key-value options. Furthermore several commands for producing row and column vectors, as well as (anti-)diagonal matrices and identity matrices, utilizing mathtools' <code>matrix*</code> family of environments, are provided. Most of the document level commands defined by this package can also be disabled using a package load-time option to avoid clashes with commands defined by other packages. The package depends on mathtools, bm (optional), and amssymb.

4070 *morewrites* – Always room for a new write stream

Web page on CTAN <https://ctan.org/pkg/morewrites>

name	<i>morewrites</i>
caption	Always room for a new write stream
author	Le Floch, Bruno
copyright	Bruno Le Floch (2011-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	(2024-02-02)
last changes	2024-02-02
year	2024
description	(no language specified) The package aims to solve the error "No room for a new <code>\write</code>", which occurs when the user, or when the user's packages have 'allocated too many streams' using <code>\newwrite</code> (TeX has a fixed maximum number – 16 – such streams built-in to its code). The package hooks into TeX primitive commands associated with writing to files; it should be loaded near the beginning of the sequence of loading packages for a document. The package uses the l3kernel bundle.

4085 mpfonts – Computer Modern Type 3 fonts converted using MetaPost

Web page on CTAN <https://ctan.org/pkg/mpfonts>

name	mpfonts
caption	Computer Modern Type 3 fonts converted using MetaPost
author	Miller, Daniel Benjamin
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
license	knuth = Knuth License (free)
license	other-free = Free license not otherwise listed (free)
license	pd = Public Domain Software (free)
license	ofl = The SIL Open Font License (free)
version	(2020-01-30)
last changes	2020-01-30
year	2020
description	(no language specified) The Computer Modern fonts are available in Type 1 format, but these renditions are somewhat thin and spindly, and produce much lighter results than the originals. It is alternatively possible to use Metafont bitmaps, but this has its disadvantages in comparison with vector fonts. These fonts are conversions to Type 3 fonts, done entirely in MetaPost; they are vector fonts which are a direct conversion from the original Metafont files, so they are the design most authentic to the originals.

However, these fonts, because they are PostScript Type 3 fonts, are not suitable for on-screen reading, and should probably only be used for printing.

Note: do NOT add the map file to updmap!

4086 *mpgraphics* – Process and display MetaPost figures inline

Web page on CTAN	https://ctan.org/pkg/mpgraphics
name	mpgraphics
caption	Process and display MetaPost figures inline
author	Khalighi, Vafa
author	bidi-tex GitHub Organisation
copyright	Persian TeX Group (2011-2013)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.3

description	(no language specified) The package allows LaTeX users to typeset MetaPost code inline and display figures in their documents with only and only one run of LaTeX, pdfLaTeX or XeLaTeX (no separate runs of mpost). Mpgraphics achieves this by using the shell escape (<code>\write 18</code>) feature of current TeX distributions, so that the whole process is automatic and the end user is saved the tiresome processing.

4091 *mptopdf* – Direct MetaPost graphics support in PDF

Web page on CTAN <https://ctan.org/pkg/mptopdf>

Alias pdf-mps-supp

name mptopdf

caption Direct MetaPost graphics support in PDF

author Hagen, Hans

license gpl = GNU General Public License (free)

description (no language specified) This package provides a set of macros and a script for MetaPost graphics support. All files are maintained as part of the ConTeXt distribution.

The macros provide support for the use of MetaPost graphics output directly in pdfTeX, either in ConTeXt or using the LaTeX *graphics* package under pdfTeX.

The script is `mptopdf.pl`, a standalone Perl script to convert MetaPost output to PDF.

4100 *msx2msa* – Simulate *msxm* and *msym* fonts using *msam* and *msbm*

Web page on CTAN <https://ctan.org/pkg/msx2msa>

name	<code>msx2msa</code>
caption	Simulate <i>msxm</i> and <i>msym</i> fonts using <i>msam</i> and <i>msbm</i>
license	<code>noinfo</code> = <code>noinfo</code>
version	(1992-08-16)
last changes	1992-08-16
year	1992
description	(no language specified) In the deeps of time, the AMS distributed mathematical symbol fonts called <i>msxm</i> and <i>msym</i> ; these fonts were designed using the original (SAIL) version of Metafont and for a long time after the demise of that system were only available as 300 dpi bitmaps. Eventually, the symbols were re-implemented using ‘modern’ Metafont in fonts called <i>msam</i> and <i>msbm</i> . The virtual fonts of this bundle implement the encoding of the old fonts using the glyphs of the new fonts, and can be used as drop-in replacements in documents (and even when processing DVI files).

4105 *mtgreek* – Use italic and upright greek letters with mathtime

Web page on CTAN <https://ctan.org/pkg/mtgreek>

name	<code>mtgreek</code>
caption	Use italic and upright greek letters with mathtime
author	Tinnefeld, Karsten
license	lppl = The LaTeX Project Public License (free)
version	1.1+
description	(no language specified) This package is an add-on to the MathTime a style to provide TeX support for the use of the MathTime(tm) fonts (formerly distributed by YandY, Inc.). The MathTime package has uppercase Greek letters hardwired to be upright and only upright; this package provides a switch to choose between the two kinds of Greek uppercase letters.

4111 *multi-sudoku* – Create and customise Sudoku grids of various sizes

Web page on CTAN	https://ctan.org/pkg/multi-sudoku
name	<code>multi-sudoku</code>
caption	Create and customise Sudoku grids of various sizes
author	Bartolo Alegre, Luis F.
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.00

4112 *multiaudience* – Several versions of output from the same source

description	(no language specified) This package provides tools for typesetting Sudoku grids of various sizes in LaTeX. Unlike other Sudoku packages which are typically limited to the standard 9×9 layout, this package supports a broad range of grid sizes – from trivial 1×1 puzzles to extended 49×49 Sudokus – that’s the limit for now! Grids are drawn with our sudoku environment, which is based on using LaTeX’s native tabular environment. We include intuitive options to control dimensions, font size, and grid thickness. Entries in the grid are inserted as in a regular table, thus making it simple to create, customise, and fill Sudoku puzzles manually.

4118 **multicol** – Intermix single and multiple columns

Web page on CTAN <https://ctan.org/pkg/multicol>

name	<code>multicol</code>
caption	Intermix single and multiple columns
author	The LaTeX Project Team
author	Mittelbach, Frank
copyright	Frank Mittelbach (1989-2023)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.0b (2025-10-21)
last changes	2025-10-21
year	2025

description	(no language specified) Multicol defines a multicol environment which typesets text in multiple columns (up to a maximum of 10), and (by default) balances the end of each column at the end of the environment. The package enables you to switch between any (permitted) number of columns at will: there is no imposed "clear page" operation, as there is in unadorned LaTeX at a switch between <code>\onecolumn</code> and <code>\twocolumn</code> sections. The multicolumn environment can also be used inside a box, thus allowing multicolumned insets in text. Multicol patches the output routine, and may clash with other packages that do the same (e.g., <code>longtable</code>); furthermore, there is no provision for single column floats inside a multicolumn environment, so figures and tables must be coded in-line (using, for example, the H modifier of the <code>float</code> package). The package is part of the <code>latex-tools</code> bundle in the LaTeX <code>required</code> distribution.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/required/tools/multicol.pdf

4125 multifootnote – Multiple numbers for the same footnoteWeb page on CTAN <https://ctan.org/pkg/multifootnote>

name	multifootnote
caption	Multiple numbers for the same footnote
author	XU, Jinwen
copyright	Jinwen XU (2022-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	(2024-03-24)
last changes	2024-03-24
year	2024
description	(no language specified) This package provides several commands for generating footnotes which correspond to multiple footnote numbers (resp. marks). In some cases, you may wish for certain footnotes to correspond to several places in your text. The traditional solution usually involves writing the same footnote mark multiple times at the corresponding places. However, this approach makes it difficult to see at once how many times a footnote has been referred to. Therefore, the current package proposes another method: writing the footnote marks in linear order, and allowing a footnote text to match several of these marks.

4126 **multilang** – A LaTeX package for maintaining multiple translations of a document

Web page on CTAN <https://ctan.org/pkg/multilang>

name	multilang
caption	A LaTeX package for maintaining multiple translations of a document
author	Grewe, Richard
copyright	Richard Grewe (2016-2018)
license	lppl1.2 = The LaTeX Project Public License 1.2 (free)
version	0.9b
description	(no language specified) Maintaining a LaTeX document with translations for multiple languages can be cumbersome and error-prone. This package provides a set of macros for defining macros and environments as wrappers around existing macros and environments. These wrappers allow one to clearly specify multiple translations for the arguments to the wrapped macros and environments while only the translation of the document's language is actually shown. Choosing a translation then is as simple as choosing the document's language via babel or polyglossia.

4127 multind – Multiple indexes in LaTeX documents

Web page on CTAN <https://ctan.org/pkg/multind>

name	multind
caption	Multiple indexes in LaTeX documents
author	Long, F.W.
license	noinfo = noinfo
version	1.1b
description	(no language specified) The package redefines <code>\makeindex</code>, <code>\index</code> and <code>\printindex</code> commands to deal with multiple indexes. In each case, the command gains a (first) argument specifying the index in question: the name used there is used as a name for the index files, so one then uses the command <code>makeindex <index file></code> for each index, separately. The package does not work in documents using AMS classes; the AMS provide a replacement package amsmidx, which is based on multind.

last changes	2025-06-21
year	2025
description	(no language specified) This package provides tools for typesetting multilingual lecture notes, exercise sheets, and general-purpose documents. Each language is specified via its corresponding babel identifier and is associated with a declaration, macro, and environment used to delimit content written in that language. Arbitrary combinations of languages can be loaded in a single document to support both monolingual and multilingual output. The package also defines macros and environments for typesetting lecture notes and exercise sheets, including configurable inclusion of elements such as proofs, solutions, and sketchboxes.

version	1.38 (2024-03-29)
last changes	2024-03-29
year	2024
description	(no language specified) MusiXTeX provides a set of macros, based on the earlier MusicTeX, for typesetting music with TeX. To produce optimal spacing, MusiXTeX is a three-pass system: etex, musixflx, and etex again. (Musixflx is a lua script that is provided in the bundle.) The three-pass process, optionally followed by processing for printed output, is automated by the musixtex wrapper script. The package uses its own specialised fonts, which must be available on the system for musixtex to run. This version of MusiXTeX builds upon work by Andreas Egler, whose own version is no longer being developed. The MusiXTeX macros are universally acknowledged to be challenging to use directly: the pmx preprocessor compiles a simpler input language to MusiXTeX macros..

last changes	2016-01-30
year	2016
description	(no language specified) The package includes an archive containing a MusiXTeX extension library <code>musixtnt</code> and C source code, binaries for Windows (32 bit and 64 bit) and MacOSX, and documentation for two programs: <code>fixmsxpart</code> and <code>msxlint</code>. <code>musixtnt.tex</code> provides a macro <code>\TransformNotes</code> that enables transformations of the effect of notes commands such as <code>\notes</code>. In general, the effect of <code>\TransformNotes{input}{output}</code> is that notes commands in the source will expect their arguments to match the input pattern, but the notes will be typeset according to the output pattern. An example is extracting single-instrument parts from a multi-instrument score. <code>fixmsxpart</code> corrects note spacing in a single-part MusiXTeX source (possibly derived from a multi-instrument score and as a result having irregular note spacing). <code>msxlint</code> detects incorrectly formatted notes lines in a MusiXTeX source file. This should be used before using <code>\TransformNotes</code>.

name	mwcls
caption	Polish-oriented document classes
author	Woliński, Marcin
copyright	Marcin Woliński (2000-2003, 2008-2009, 2017)
license	lpl1.2 = The LaTeX Project Public License 1.2 (free)
version	0.75
description	(no language specified) mwcls is a set of document classes for LaTeX 2e designed with Polish typographical tradition in mind. Classes include: ‘mwart’ (which is a replacement for ‘article’), ‘mwrep’ (replacing ‘report’), and ‘mwbk’ (replacing ‘book’). Most features present in standard classes work with mwcls classes. Some extensions/exceptions include: sectioning commands allow for second optional argument (it is possible to state different texts for running head and for TOC), new environments ‘itemize*’ and ‘enumerate*’ for lists with long items, page styles have variants for normal, opening, closing, and blank pages.

4156 mylatex – Make a format containing a document's preambleWeb page on CTAN <https://ctan.org/pkg/mylatex>

name	mylatex
caption	Make a format containing a document's preamble
author	Carlisle, David
license	lppl = The LaTeX Project Public License (free)
version	(2020-10-23)
last changes	2020-10-23
year	2020
description	(no language specified) The file <code>mylatex.ltx</code> permits you to create a format that pre-loads a set of package files (and/or other macros) that you regularly use. In some circumstances, this can be a great advantage (though on an ordinarily fast modern computer on the desktop, gains will be limited). The general scheme is to initialise your usage by a command of the form: <code>latex -ini mylatex.ltx <document></code> which will create a format file <code>mylatex.fmt</code>, which you then use as: <code>latex -fmt=mylatex <document></code>

4170 namedef – TeX definitions with named parameters

Web page on CTAN <https://ctan.org/pkg/namedef>

name	namedef
caption	TeX definitions with named parameters
author	Oleinik, Phelype
copyright	Phelype Oleinik (2019-2020)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0 (2020-06-20)
last changes	2020-06-20
year	2020
description	(no language specified) This package provides a prefix <code>\named</code> to be used in TeX definitions so that parameters can be identified by their name rather than by number, giving parameters a semantic rather than syntactic meaning, making it easy to understand long definitions. A usual definition reads:

4171 `namedtensor` – Macros for named tensor notation

```
\def\SayHello#1{Hello, #1!}
```

but with `namedef` you can replace `#1` by, say, `#[person]` :

```
\named\def\SayHello#[person]{Hello, #[person]!}
```

and `\named` will figure out the numbering of the parameters for you.

version 2.03y (2020-08-31)

last changes 2020-08-31

year 2020

description (no language specified) This package provides a LaTeX class `nanicolle.cls` for typesetting collection labels and identification labels in Chinese style or in western style for plant herbarium specimens.

So far, documents using this class can only be compiled with **XeLaTeX**.

Note: The name of the package is a compound of the Japanese "nani" (meaning "what") and a truncated form of the English "collect", thus expressing the ideas of identification/classification (taxonomy) and collection.

4181 *nath* – Natural mathematics notationWeb page on CTAN <https://ctan.org/pkg/nath>

name	Nath
caption	Natural mathematics notation
author	Marvan, Michal
license	gpl = GNU General Public License (free)
description	(no language specified) Nath is a LaTeX (both 2e and 2.09) style to separate presentation and content in mathematical typography. The style delivers a particular context-dependent presentation on the basis of a rather coarse context-independent notation. Highlighted features: depending on the context, the command <code>\frac</code> produces either built-up or case or solidus fractions, with parentheses added whenever required for preservation of the mathematical meaning; delimiters adapt their size to the material enclosed, rendering <code>\left</code> and <code>\right</code> almost obsolete.
documentation	(no language specified) <i>Package Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/nath/README

4185 *navydocs* – Support for Technical Reports by US Navy Organizations

Web page on CTAN <https://ctan.org/pkg/navydocs>

name	navydocs
caption	Support for Technical Reports by US Navy Organizations
author	Rochford, Peter A.
copyright	Peter Andrew Rochford (2016)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.1 (2017-07-01)
last changes	2017-07-01
year	2017
description	(no language specified) The navydocs package provides an easy means for creating title pages and the following supplementary material pages used in technical reports by United States Navy organizations. These pages are generated by specifying the page content via a set of commands and then calling a macro to create the page at its occurrence in the document. This package is provided in the hope that it proves useful to other Navy organizations, with users contributing macros for their organizations.

4186 *nb4latex* – Convert NotaBene4 to LaTeX

Web page on CTAN	https://ctan.org/pkg/nb4latex
name	<code>nb4latex</code>
caption	Convert NotaBene4 to LaTeX
author	Milanese, Guido
license	pd = Public Domain Software (free)
description	(no language specified) A program to convert old (MS-DOS) NotaBene4 (including ancient Greek and all the symbols of logic) files to LaTeX format. With this conversion program and its utilities, you can use NotaBene for editing (seeing all the accents, the Greek chars, etc.) and, at the very final stage of document preparation, convert it to LaTeX. The present version of the program is implemented for MS-DOS; the README discusses what might be necessary to update the program.

4202 *nccsect* – A re-implementation of sections, captions and tocs

Web page on CTAN <https://ctan.org/pkg/nccsect>

name	nccsect
caption	A re-implementation of sections, captions and tocs
author	Rozhenko, Alexander I.
copyright	Alexander I. Rozhenko (2002-2006)
license	lppl = The LaTeX Project Public License (free)
version	1.5
description	(no language specified) The package user has section control commands that mirror the internal controls used in LaTeX. In particular, the user may express the section level explicitly in a <code>\startsection</code> command, rather than by name (as in <code>\section</code>, <code>\subsection</code>, etc., in LaTeX itself, defined in terms of an internal command). By using this <code>\startsection</code>, the user may have astounding depths of sections, which is sometimes useful in extreme typesetting applications. A <code>\sectionstyle</code> command controls the appearance of predefined, or user-defined sections, and <code>\DeclareSection</code> allows the user to create sectioning or caption commands, or to modify existing ones. The package also extends user control of the appearance of tables of contents, etc., using a command <code>\DeclareTOCEntry</code>. This package is part of the ncctools bundle.
documentation	(no language specified) <i>Bundle readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/ncctools/README

4204 *nccthm* – Another theorem environment

Web page on CTAN <https://ctan.org/pkg/nccthm>

name	nccthm
caption	Another theorem environment
author	Rozhenko, Alexander I.
copyright	Alexander I. Rozhenko (2002-2004)
license	lppl = The LaTeX Project Public License (free)
version	1.1
description	(no language specified) This package's theorems have two distinguishing characteristics. First, theorem numbering uses dynamic counters (specified by using the dcounter package, which gives the user considerable flexibility in counting styles. Second, the environment isn't defined as a trivialist (as LaTeX theorems are), which gives extra flexibility in using the environment. In addition, parameter definition is explicit and well-organised, and there is a QED-symbol-placing command.

4205 *ncctools* – A collection of general packages for LaTeX

Web page on CTAN <https://ctan.org/pkg/ncctools>

name	ncctools
caption	A collection of general packages for LaTeX
author	Rozhenko, Alexander I.
license	lppl = The LaTeX Project Public License (free)
version	3.5.3 (2019-08-03)
last changes	2019-08-03
year	2019
description	(no language specified) The NCCtools bundle contains many packages for general use under LaTeX; many are also used by NCC LaTeX . The bundle includes tools for:

- **executing commands after a package is loaded** ;
- **watermarks** ;
- **counter manipulation** (dynamic counters, changing counter numbering with another counter);
- **improvements to the description environment** ;
- **hyphenation of compound words** ;
- **new levels of footnotes** ;
- **space-filling patterns** ;
- **"poor man's" Black Board Bold symbols** ;
- **alignment of the content of a box** ;
- **use comma as decimal separator** ;
- **boxes with their own crop marks** ;
- **page cropmarks** ;
- **improvements to fancy headers** ;
- **float "styles", mini floats, side floats** ;
- **manually marked footnotes** ;
- **extension of amsmath** ;
- **control of paragraph skip** ; **an envelope to the graphicx package** ;
- **dashed and multiple rules** ;

- alternative techniques for declarations of sections, captions, and toc-entries ;
- generalised text-stretching ;
- generation of new theorem-like environments ;
- control of the text area ;
- centred page layouts ; and
- un-numbered top-level section .

name	neoschool
caption	LaTeX class for teachers
author	Ikhlef, Razik
copyright	Razik Ikhlef (2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0.0
description	(no language specified) This package provides secondary school teachers with a comprehensive set of tools for creating educational documents such as assessments, course materials, exercise sheets with solutions, and more. It includes eight predefined color themes, various class options for layout and typography, specialized environments, dedicated commands, and multiple preformatted header styles tailored to different document types. The package integrates numerous commonly used LaTeX packages, which significantly reduces the need for extensive preambles and minimizes compatibility issues. Additionally, it is multilingual, supporting French, English, and German.

4223 newclude – Reimplemented `\include` system for LaTeX

Web page on CTAN <https://ctan.org/pkg/newclude>

name	newclude
caption	Reimplemented <code>\include</code> system for LaTeX
author	Swift, Matt
license	gpl = GNU General Public License (free)
version	2
description	(no language specified) A LaTeX package providing a backwards-compatible reimplementation of <code>\include</code> and <code>\includeonly</code>. The principal new features are: • the restriction that <code>\clearpage</code> s must surround an included file is removed, • the restriction that <code>\include</code> s cannot be nested is removed, and • the provision of hooks to be executed before and after the contents of an included file. Newclude accomplishes the first two by using a single <code>.aux</code> file instead of many. Newclude also provides the experimental functionality of the unsupported package includex, which allows you to include partial contents of independent LaTeX files that can also be processed on their own (that is, files that contain <code>\documentclass</code>, <code>\begin{document}</code>, etc.).

year	2026
description	(no language specified) This is a new assembly of Computer Modern fonts including extensions in many directions for both Latin based languages, non-Latin based languages and Mathematics, all compatible in style to CM fonts. In addition to the Regular weight of Computer Modern, it provides a Book weight for heavier printing. Regarding license: Some fonts are now distributed under GPL3+FontException+DistributionException in Chapter7 of the GPL. This is explicitly written and described in the <code>License.txt</code> file and the documentation of the package.

4230 *newlfm* – Write letters, facsimiles, and memos

Web page on CTAN <https://ctan.org/pkg/newlfm>

name *newlfm*
caption Write letters, facsimiles, and memos
author Thompson, Paul A.
copyright Paul Thompson (1999-2009)
license gpl = GNU General Public License (free)
version 9.4

description	(no language specified) Integrates the letter class with fancyhdr and geometry to automatically make letterhead stationery. Useful for writing letters, fax, and memos. You can set up an address book using ‘wrapper’ macros. You put all the information for a person into a wrapper and then put the wrapper in a document. The class handles letterheads automatically. You place the object for the letterhead (picture, information, etc.) in a box and all sizing is set automatically.

4242 newverbs – Define new versions of `\verb`, including short verb versions

Web page on CTAN <https://ctan.org/pkg/newverbs>

name	newverbs
caption	Define new versions of <code>\verb</code> , including short verb versions
author	Scharrer, Martin
copyright	Martin Scharrer (2010-2022)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.6a (2022-10-25)
last changes	2022-10-25
year	2022
description	(no language specified) The package allows the definition of <code>\verb</code> variants which add TeX code before and after the verbatim text (e.g., quotes or surrounding <code>\fbox{ }</code>). When used together with the shortvrb package it allows the definition of short verbatim characters which use this package's variant instead of the normal <code>\verb</code>. In addition, it is possible to collect an argument verbatim to either typeset or write it into a file. The <code>\Verbdef</code> command defines verbatim text to a macro which can later be used to write the verbatim text to a file.

version	7.8 (2026-03-11)
last changes	2026-03-11

year	2026
description	(no language specified) This package is based on the package <code>array</code> . It creates <code>PGF/TikZ</code> nodes under the cells of the array and uses these nodes to provide functionalities to construct tabulars, arrays and matrices. Among the features : • continuous dotted lines for the mathematical matrices; • exterior rows and columns (so-called border matrices); • control of the width of the columns; • tools to color rows and columns with a good PDF result; • blocks of cells; • tabular notes; • etc. The package requires and loads <code>array</code> , <code>amsmath</code> , <code>pgfcore</code> , and the module shapes of <code>PGF</code> .

4253 *nicetext* – Minimal markup for simple text (Wikipedia style) and documentation

Web page on CTAN <https://ctan.org/pkg/nicetext>

name	nicetext
caption	Minimal markup for simple text (Wikipedia style) and documentation
author	Lück, Uwe
copyright	Uwe Lück (2009-2015)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	r0.67
description	(no language specified) The bundle offers "minimal" markup syntax for various simple kinds of text. The user will typically involve little more than is printed, and will still get LaTeX quality. The bundle provides four packages: • wiki addresses general texts, marked up in the simple style used on Wikipedia; • niceverb is yet another means of documenting LaTeX packages: it offers syntax-aware typesetting of meta-variables (macro arguments) and for referring to commands (and their syntax) in footnotes, section titles etc.; • finddo aims to parse plain text or (La)TeX files using TeX, and to write the results to an external file; the package is used by another member of the bundle: • makedoc, which provides the means to produce typeset documentation direct from package files.

4267 nlatexdb – Database reports using LaTeX and .Net (or Mono)

Web page on CTAN <https://ctan.org/pkg/nlatexdb>

name	nlatexdb
caption	Database reports using LaTeX and .Net (or Mono)
author	Höns, Robin
copyright	Robin Höns (2011)
license	gpl = GNU General Public License (free)
version	0.03
description	(no language specified) This is a compatible rewrite of LaTeXDB (by Hans-Georg Eßer) or ratexdb (by this package’s author) in C#/.Net. It works under Mono, too. It is a preprocessor which performs SQL queries on a database and creates LaTeX code for the resulting rows. Ratexdb implements a few improvements, e.g. regexp postprocessing, command-line options, some protection against SQL injection, replacement of LaTeX reserved characters.
documentation	(no language specified) <i>Readme</i>: https://ctan.org/tex-archive/support/nlatexdb/README
on CTAN	https://ctan.org/tex-archive/support/nlatexdb
keyword	preprocessor (preprocesses source before using TeX)
keyword	db-access (access database for document contents)

4281 *nolbreaks* – No line breaks in text

Web page on CTAN <https://ctan.org/pkg/nolbreaks>

name	nolbreaks
caption	No line breaks in text
author	Arseneau, Donald
license	pd = Public Domain Software (free)
version	1.2
description	(no language specified) Use <code>\nolbreaks{some text}</code> to prevent line breaks in "some text". This has the advantage over <code>\mbox{ }</code> that glue (rubber space) remains flexible. Most common cases are handled here (<code>\linebreak</code> is disabled, for example) but spaces hidden in macros or <code>{ }</code> can still create break-points.

4284 non-decimal-units – Display and manipulate historical non-decimal units

Web page on CTAN	https://ctan.org/pkg/non-decimal-units
name	<code>non-decimal-units</code>
caption	Display and manipulate historical non-decimal units
author	Eriksen, Mikkel Eide
license	cc-by-sa-4 = CC BY-SA 4.0 (free)
version	(2024-01-25)
last changes	2024-01-25
year	2024
description	(no language specified) Many historical unit systems were non-decimal. For example, the Danish rigsdaler — where 1 rigsdaler consists of 6 mark, each again consisting of 16 skilling for a total of 96 skilling per rigsdaler — was used from 1625 to 1875, when currency was decimalised to the current system of 1 krone = 100 øre. Units for such measures as length, area, weight, and so on were also often non-decimal, and in fact remain so in the few places of the world that have not made the change to the metric system.

4285 `nonfloat` – Non-floating table and figure captions

The non-decimal numbers were chosen due to their larger number of division factors, which simplified mental arithmetic, eg. when sharing an amount of money or dividing goods.

This package enables creation and configuration of such units to facilitate their presentation in textual and tabular contexts, as well as simple arithmetic.

Web page on CTAN <https://ctan.org/pkg/nopageno>

name	<code>nopageno</code>
caption	No page numbers in LaTeX documents
author	Carlisle, David
license	lppl = The LaTeX Project Public License (free)
version	(1989-01-01)
last changes	1989-01-01
year	1989
description	(no language specified) LaTeX’s standard styles use two page styles, one on normal pages and one on ‘opening’ pages with <code>\maketitle</code> or <code>\chapter</code> , etc. Unfortunately there is only easy access to changing one of these two so if you want something other than ‘plain’ on the opening pages you must use <code>\thispagestyle</code> on each such page. The fancyhdr package does provide a more flexible interface, but if you just want an empty page style on all pages then this package will do the job.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/nopageno/nopageno.pdf

4288 *noprot* – Avoid the need for protection

Web page on CTAN <https://ctan.org/pkg/noprot>

name	noprot
caption	Avoid the need for protection
author	Sozuer, Sami
license	noinfo = noinfo
version	(2004-08-16)
last changes	2004-08-16
year	2004
description	(no language specified) An approach to reducing the need for <code>\protect</code>. The package re-writes the <code>\thanks</code>, <code>\caption</code> and sectioning commands (<code>\chapter</code>, <code>\section</code>, ...), <code>\addcontentsline</code>, <code>\addtocontents</code> and <code>\bibitem</code>, to suppress the expansion of their arguments when those arguments are written to the <code>.aux</code> file. The mechanism is not entirely satisfactory: there is still a problem with things written with the <code>\mark*</code> commands, and one loses the facility of making direct reference to the current page (i.e., one must use <code>\pageref</code> for such things).
on CTAN	https://ctan.org/tex-archive/macros/latex209/contrib/misc/noprot.sty

author	Wright, Joseph
copyright	Joseph Wright (2007-2013, 2016, 2019)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.0m (2019-09-28)
last changes	2019-09-28
year	2019
description	(no language specified) The package defines a new type of note, <code>bibnote</code>, which will always be added to the bibliography. The package allows footnotes and endnotes to be moved into the bibliography in the same way. The package can be used with <code>natbib</code> and <code>BibLaTeX</code> as well as plain LaTeX citations. Both sorted and unsorted bibliography styles are supported. The package uses the LaTeX 3 macros and the associated xpackages bundle. It also makes use of the e-TeX extensions (any post-2005 LaTeX distribution will provide these by default, but users of older systems may need to use an <code>elatex</code> command or equivalent). The package relies on LaTeX 3 support from the l3kernel and l3packages bundles.

4306 noweb – A simple extensible literate programming toolWeb page on CTAN <https://ctan.org/pkg/noweb>

name	noweb
caption	A simple extensible literate programming tool
author	Ramsey, Norman
copyright	Norman Ramsey (1989-2018)
license	other-free = Free license not otherwise listed (free)
license	bsd2 = Simplified BSD License (free)
version	2.12 (2018-06-20)
last changes	2018-06-20
year	2018
description	(no language specified) Noweb is designed to meet the needs of literate programmers while remaining as simple as possible. Its primary advantages are simplicity, extensibility, and language-independence. Noweb uses 5 control sequences to WEB's 27. The noweb manual is only 4 and a bit pages; an additional page explains how to customize its LaTeX output. Noweb works "out of the box" with any programming language, and supports TeX, LaTeX, and HTML back ends. A back end to support full hypertext or indexing takes about 250 lines; a simpler one can be written in 40 lines of awk. Noweb does not prettyprint natively, but supports prettyprinting through such third-party filters as pretzel and dpp.

4326 *numberpt* – Counters spelled out in Portuguese

Web page on CTAN <https://ctan.org/pkg/numberpt>

name	numberpt
caption	Counters spelled out in Portuguese
author	Frasson, Miguel Vinícius Santini
copyright	Miguel V. S. Frasson (2019)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0 (2019-07-13)
last changes	2019-07-13
year	2019
description	(no language specified) This packages defines commands to display counters spelled out in Portuguese. The styles are • <code>\numberpt</code> for "all lowercase" • <code>\Numberpt</code> for "First word capitalized" • <code>\NumberPt</code> for "All Capitalized" • <code>\NUMBERPT</code> for "ALL UPPERCASE"

For example, `\renewcommand{\thechapter}{\NumberPt{chapter}}` makes chapter titles to be rendered as "Capítulo Um", "Capítulo Dois" etc.

Options are offered to select variations in the spelling of "14", or Brazilian vs. European Portuguese forms in the spelling of "16", "17", and "19".

The package requires **expl3** and **xparse** .

4327 **numbersets** – Display number sets with customizable typefaces

Web page on CTAN <https://ctan.org/pkg/numbersets>

name	<code>numbersets</code>
caption	Display number sets with customizable typefaces
author	Noguchi, Takumi
license	mit = MIT License (free)
version	0.2.0 (2024-10-15)
last changes	2024-10-15
year	2024
description	(no language specified) This package allows users to express mathematical concepts related to sets of numbers using meaningful commands rather than relying on visual representations.

Key Features:

4328 *numending* – Generates morphological end of units

- Command to specify typefaces for number sets.
- Interface for defining typeface rules.
- Interface for creating commands that represent number sets.
- Several predefined presets for common number sets.

4329 *numERICA* – Numerically evaluate mathematical expressions in LaTeX form

Web page on CTAN <https://ctan.org/pkg/numERICA>

name	<code>numERICA</code>
caption	Numerically evaluate mathematical expressions in LaTeX form
author	Parsloe, Andrew
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	3.0.0
description	(no language specified) This package defines a command to wrap around a mathematical expression in its LaTeX form and, once values are assigned to variables, numerically evaluate it. The intent is to avoid the need to modify the LaTeX form of the expression being evaluated. For programs with a preview facility like LyX, or compile-as-you-go systems, interactive back-of-envelope calculations and numerical exploration are possible within the document being worked on. The package requires the bundles <code>l3kernel</code> and <code>l3packages</code>, and the <code>amsmath</code> and <code>mathtools</code> packages.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/numERICA/numERICA.pdf

4332 *numericplots* – Plot numeric data (including Matlab export) using PSTricks

Web page on CTAN <https://ctan.org/pkg/numericplots>

name	numericplots
caption	Plot numeric data (including Matlab export) using PSTricks
author	Michel, Alexander
author	König, Thomas
copyright	Thomas König, Alexander Michel, Michael Baumgart (2010-2013)
license	gpl3 = GNU General Public License, version 3 (free)
version	2.0.2 (2013-09-19)
last changes	2013-09-19
year	2013
description	(no language specified) Plotting numeric data is a task which has often to be done for scientific papers. LaTeX itself provides no facilities for drawing more than the simplest plots from supplied data. The package will process user input, and uses PSTricks to plot the results. The package provides Matlab functions to transform Matlab results to plottable data.

4336 numprint – Print numbers with separators and exponent if necessaryWeb page on CTAN <https://ctan.org/pkg/numprint>

name	numprint
caption	Print numbers with separators and exponent if necessary
author	Harders, Harald
copyright	Harald Harders (2000-2005, 2007, 2008, 2012)
license	lppl = The LaTeX Project Public License (free)
version	1.39
description	(no language specified) The package numprint prints numbers with a separator every three digits and converts numbers given as 12345.6e789 to $12,345,6\cdot 10^{789}$. Numbers are printed in the current mode (text or math) in order to use the correct font. Many things, including the decimal sign, the thousand separator, as well as the product sign can be changed by the user, e.g., to reach $12,345.6\text{times } 10^{789}$. If an optional argument is given it is printed upright as unit. Numbers can be rounded to a given number of digits. The package supports an automatic, language-dependent change of the number format. Tabular alignment using the tabular(*), array, tabularx, and longtable environments (similar to the dcolumn and rccol packages) is supported using all features of numprint. Additional text can be added before and after the formatted number.

year	2024
description	(no language specified) The bundle includes LaTeX classes and BibLaTeX styles files dedicated to the new journal “North-Western European Journal of Mathematics” : • <i>nwejm</i> for the complete issues of the journal, aimed at the NWEJM’s team, • <i>nwejmart</i> , intended for the authors who wish to publish an article in the NWEJM. This class’s goal is to: – faithfully reproduce the layout of the <i>nwejm</i>, thus enabling the authors to be able to work their document in actual conditions, – provide a number of tools (commands and environments) to facilitate the drafting of documents, in particular those containing mathematical formulas.

version	1.2 (2026-04-21)
last changes	2026-04-21
year	2026
description	(no language specified) This bundle provides LaTeX tools for the faculty <i>NXT Nachhaltigkeit und Technologie</i> (Sustainability and Technology) at Reutlingen University, Germany. It comprises three components: a thesis class (nxtthesis) based on KOMA-Script <code>scrreprt</code> ; a letter class option (nxtbrief) for KOMA-Script <code>scrletter2</code> ; and a Beamer presentation theme (beamerthemeNXT) in 16:9 format with configurable header and footer graphics. An OpenType font (<code>NXT_Logo.otf</code> , OFL 1.1) encodes the NXT logo as a typographic glyph. All components can be adapted for use at other institutions.

4345 oberdiek – A bundle of packages submitted by Heiko Oberdiek

Web page on CTAN <https://ctan.org/pkg/oberdiek>

name	oberdiek
caption	A bundle of packages submitted by Heiko Oberdiek
author	Oberdiek, Heiko
copyright	Heiko Oberdiek (2007, 2009-2011)
copyright	Oberdiek Package Support Group (2016-2026)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	(2026-03-06)
last changes	2026-03-06
year	2026
description	(no language specified) The bundle comprises packages to provide: • bmpsize : get bitmap size and resolution data; • centernot : a horizontally-centred <code>\not</code> symbol; • chemarr : extensible chemists' reaction arrows; • classlist : record information about document class(es) used; • colonequals : poor man's mathematical relation symbols; • dvipscol : dvips colour stack management; • engord : define counter-printing operations producing English ordinals; • eolgrab : collect arguments delimited by end of line; • flags : setting and clearing flags in bit fields and converting the bit field into a decimal number; • holtxdoc : extra documentation macros; • hypbmsec : bookmarks in sectioning commands; • hypgotoe : experimental package for links to embedded files; • hyphsubst : substitute hyphenation patterns; • ifdraft : switch for option draft;

- **iflang** : provides expandable checks for the current language;
- **pdfcolparallel** : fixes colour problems in package **parallel** ;
- **pdfcolparcolumns** : fixes colour problems in package **parcolumns** ;
- **pdfcrypt** : setting PDF encryption;
- **protecteddef** : define a command that protected against expansion;
- **resizegather** : automatically resize overly large equations;
- **rotchiffre** : performs simple rotation cyphers;
- **scrindex** : redefines environment ‘theindex’ of package ‘index’, if a class from KOMA-Script is loaded;
- **setouterhbox** : set `\hbox` in outer horizontal mode;
- **settobox** : getting box sizes;
- **stackrel** : extensions of the `\stackrel` command;
- **stampinclude** : selects the files for `\include` by inspecting the timestamp of the `.aux` file(s);
- **tabularht** : tabulars with height specification;
- **tabularkv** : key value interface for tabular parameters;
- **thepdfnumber** : canonical numbers for use in PDF files and elsewhere;
- **twoopt** : commands with two optional arguments;

Each of the packages is represented by two files, a `.dtx` (documented source) and a PDF file; the `.ins` file necessary for installation is extracted by running the `.dtx` file with Plain TeX.

4350 *occam* – Strip unnecessary macros from a fileWeb page on CTAN <https://ctan.org/pkg/occam>

name	occam
caption	Strip unnecessary macros from a file
author	Siebenmann, Laurent
license	noinfo = noinfo
version	(1991-08-12)
last changes	1991-08-12
year	1991
description	(no language specified) The Occam macros aim to implement, in TeX macros, what the author characterises as the equivalent of Occam’s razor: to produce macro packages that do exactly what a document needs, and no more. The main aims of the package are achieved by the macro package <code>Auditor.tex</code>, which explores the macro definitions of the file; and macros for the Mac QEDM editor to process the output of <code>Auditor</code> and the original file to remove unnecessary material (macros and related stuff).
documentation	(no language specified) <i>A paper outlining the system:</i> https://ctan.org/tex-archive/macros/generic/occam/Occam95.pdf

4352 *ocgtools* – Manipulate OCG layers in PDF presentations

Web page on CTAN <https://ctan.org/pkg/ocgtools>

name	<code>ocgtools</code>
caption	Manipulate OCG layers in PDF presentations
author	Mařík, Robert
copyright	Robert Mařík (2010)
license	lpl1.2 = The LaTeX Project Public License 1.2 (free)
version	0.95a
description	(no language specified) The package provides the means to insert OGC (Optional Group Content, commonly known as layers) into PDF presentations. This allows the user to insert any TeX material into separate layers in a PDF document and also insert links which toggle these layers on and off. Parts of the PDF document, such as formatted text, tables, maths formulas or graphics may be switched to visible or invisible state by clicking active links or buttons. The documentation discusses the package's relation to various apparently similar packages.

4353 *ocgx* – Use OCGs within a PDF document without JavaScript

version	0.5

4354 `ocgx2` – Drop-in replacement for ‘`ocgx`’ and ‘`ocg-p`’

description	(no language specified) The package extends the <code>ocg</code> package, which allows you to create OCGs (<i>Optional Content Group</i> s) in PDF documents. (The <code>ocg</code> package is distributed as part of Asymptote .) Every OCG includes TeX material into a layer of the PDF file. Each of these layers can be displayed or not. Links can enable or disable the display of OCGs. The <code>ocgx</code> package does not use Javascript embedded in the PDF document to enable (to show) or disable (to hide) OCGs.

4354 `ocgx2` – Drop-in replacement for ‘`ocgx`’ and ‘`ocg-p`’

version	0.60 (2024-09-16)
last changes	2024-09-16
year	2024
description	(no language specified) This package serves as a drop-in replacement for the packages <code>ocgx</code> by Paul Gaborit and <code>ocg-p</code> by Werner Moshhammer for the creation of PDF Layers. It re-implements the functionality of the <code>ocg</code> , <code>ocgx</code> , and <code>ocg-p</code> packages and adds support for all known engines and back-ends including: • LaTeX → dvips → ps2pdf/Distiller • (Xe)LaTeX(x) → dvipdfmx • pdfLaTeX and LuaLaTeX . It also ensures compatibility with the <code>media9</code> and <code>animate</code> packages.

4362 *octavo* – Typeset books following classical design and layoutWeb page on CTAN <https://ctan.org/pkg/octavo>

name	octavo
caption	Typeset books following classical design and layout
author	Revets, Stefan A
copyright	Stefan A. Revets (2003, 2007)
license	lppl = The LaTeX Project Public License (free)
version	1.2
description	(no language specified) The octavo class is a modification of the standard LaTeX book class. Its purpose is to typeset books following classical design and layout principles, with the express intention of encouraging the making of beautiful books by anyone with access to a good printer and with an inclination towards venerable crafts, e.g., bookbinding. The octavo class differs from the book class by implementing many of the proposals and insights of respected experts, especially Jan Tschichold and Hugh Williamson. The documentation discusses methods to organise and print out any text into signatures, which can then be gathered, folded and sewn into a book.

version 1.0.0 (2024-01-17)

last changes 2024-01-17

year 2024

description (no language specified) This package is the solution no one asked for, to a problem nobody had.

Have you ever thought to yourself "wow, I sure do dislike having to remember multiple macros for my odes and pdes" and the author of this package has to agree, wholeheartedly. In the modern world of "tik-toking" and "family guy surfing" our brains have rotted beyond salvage for even basic levels of cognitive recall. This package aims to fix this, through two macros that have been set to each have an identical form and function with an emphasis on intuitive use. Through setting options, the multiple common notational style are easily swapped between, all by a single option.

You're Welcome.

4367 *ofs* – Macros for managing large font collections

Web page on CTAN <https://ctan.org/pkg/ofs>

name	ofs
caption	Macros for managing large font collections
author	Olšák, Petr
license	knuth = Knuth License (free)
version	(2004-05-31)
last changes	2004-05-31
year	2004
description	(no language specified) OFS (Olsak's Font System) is a set of Plain TeX and LaTeX macros for managing large font collections; it has been used by Czech/Slovak users for many years. Main features include: • Mapping from long names of fonts to the metric file name. The user can specify only exact long names in documents. • Support for many font encodings. • Printing of catalogues of fonts and test samples of font families; the interactive macro <code>\showfonts</code> shows all font families you have installed via OFS. • The user interface is the same for Plain TeX and for LaTeX, but the implementation differs: the LaTeX variant of OFS uses NFSS, but the Plain variant implements its own font management (which may even be better than NFSS)

- Support for math fonts including TX fonts.

last changes	2024-03-04
year	2024
description	(no language specified) Old Standard is designed to reproduce the actual printing style of the early 20th century, reviving a specific type of Modern (classicist) style of serif typefaces, very commonly used in various editions of the late 19th and early 20th century, but almost completely abandoned later. The font supports typesetting of Old and Middle English, Old Icelandic, Cyrillic (with historical characters, extensions for Old Slavonic and localised forms), Gothic transliterations, critical editions of Classical Greek and Latin, and many more. This package works with TeX engines that directly support OpenType features, such as XeTeX and LuaTeX, as well as traditional engines such as TeX and pdfTeX.

4381 *olsak-misc* – Collection of plain TeX macros written by Petr Olšák

Web page on CTAN <https://ctan.org/pkg/olsak-misc>

name *olsak-misc*

caption Collection of plain TeX macros written by Petr Olšák

author Olšák, Petr

license pd = Public Domain Software (free)

version Aug. 2022

description (no language specified) This is a collection of various single-file plain TeX macros written by Petr Olšák.

The documentation is included in each file separately.

- *booklet.tex* : re-orders PDF pages and collects them for booklet printing
- *cnv.tex* : conversion of texts
- *cnv-pu.tex* : example of usage of *cnv.tex* — pdf outlines in Unicode
- *cnv-word.tex* : example of usage of *cnv.tex* — word to word conversion
- *eparam.tex* : Full expansion during parameter scanning
- *fun-coffee.tex* : generates splotches in the document
- *openclose.tex* : repairs balanced text between \Open ...\Close pair
- *qrcode.tex* : QR code generated at TeX level
- *scanbase.tex* : parser of text-style mysql outputs
- *scancsv.tex* : parser of CSV format
- *seplist.tex* : macros with alternative separators of a parameter
- *xmlparser.tex* : parser of XML language

4385 onedown – Typeset Bridge Diagrams

Web page on CTAN <https://ctan.org/pkg/onedown>

name OneDown

caption Typeset Bridge Diagrams

author Wiersma, Jacob

copyright Jacob Wiersma (2018-2023)

license lpl1.3 = The LaTeX Project Public License 1.3 (free)

version 1.7

description (no language specified) This is a comprehensive package to draw all sorts of bridge diagrams, including hands (stand alone or around a compass), bidding tables (stand alone or in connection with hands/compass), trick tables, and expert quizzes.

Features:

- Works for all fontsizes from `\ssmall` to `\HUGE`.
- Different fonts for hands, bidding diagrams, compass, etc. are possible.
- Annotations to card and bidding diagrams.
- Automated check on consistency of suit and hands.
- Multilingual output of bridge terms.
- Extensive documentation: User manual, Reference manual, and Examples.

4388 *onlinebrief24* – LaTeX class for DIN 5008 type-B business letters for use with *onlinebrief24.de*

Web page on CTAN <https://ctan.org/pkg/onlinebrief24>

name	onlinebrief24
caption	LaTeX class for DIN 5008 type-B business letters for use with onlinebrief24.de
author	Luciano, Francesco
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	(2026-04-17)
last changes	2026-04-17
year	2026
description	(no language specified) This is a LaTeX letter class based on KOMA-Script scr_ltr2 . It is calibrated against the onlinebrief24.de letter specifications and provides:

- a plain letter layout
- a modern layout with header, footer, and accent colors
- a guides mode for technical layout inspection
- validated address-window inputs
- verified pdfLaTeX, XeLaTeX, LuaLaTeX workflows

The package currently supports one letter per document as the hardened use case.

[Onlinebrief24.de](#) is a hybrid mail service for business customers: documents are submitted digitally, and the service handles printing, enveloping, franking, and postal delivery.

The trademark holders have formally authorized the maintainer to use the Onlinebrief24 mark in connection with this LaTeX class.

4391 *oops* – A framework for making definitions, typically mathematical, inline

Web page on CTAN <https://ctan.org/pkg/oops>

name	oops
caption	A framework for making definitions, typically mathematical, inline
author	Rogard, Erwann
copyright	Erwann Rogard (2020)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0
description	(no language specified) <i>oops</i> is a package for LaTeX (hence "scribe") that organizes (typically mathematical) definitions along two dimensions: functions and objects, hence "OO". Such definitions are made inline thanks to a minimalist interface built upon xparse. To make a definition, use <code>\OopsNew{<tl1>}</code>, where <code><tl1></code> identifies an object, followed by input that alternates between "text" and instructions. The latter create and expand definitions using rules that can be modified at the package level or themselves inline. This framework is suitable for instance where <code><tl1></code> is either of <code>ModelA</code> and <code>ModelB</code>, and each requires its own definition of, say, a space. In this case, they would be encoded respectively as <code>\Space{ModelA}</code> and <code>\Space{ModelB}</code>. However, this would be verbose if most functions applied to just one object, so the package provides a generic one that is set by default to <code>Math</code>. For example,

4392 *opacity-pro* – Set transparency and blend mode

`\OopsNew{Math}[Let~]{Space=\Omega}[~denote the sample space]{ }`, followed by `Space`, expand to: "Let Omega denote the sample space" and "Omega".

Other features automate repetitive formatting tasks. Altogether, "practical".

As of April 2020, this package has been superseded by the **ccool** package.

4403 *optidef* – Environments for writing optimization problems

Web page on CTAN <https://ctan.org/pkg/optidef>

name *optidef*

caption Environments for writing optimization problems

author Lago Garcia, Jesus

copyright Jesus Lago Garcia (2016-2018)

license lpl1.3 = The LaTeX Project Public License 1.3 (free)

version 3.1 (2019-04-23)

last changes 2019-04-23

year 2019

description (no language specified) This small library provides a standard set of environments for writing optimization problems.

It automatically aligns the problems in three points with an optional fourth:

- Beginning of the words "minimize/argmin" and "subject to"
- The objective function and the longest left hand side of the constraints.
- The $=$ | $>$ | $<$ signs of the constraints.
- Optionally, the user can add manually a double align character $\&\&$ to align some common constraints feature. A clear example could be the constraints names, e.g. (boundary constraint) alignment with (dynamic constraint).

Furthermore, it provides an easy interface to define optimization problem for three different reference situations:

- Where no equation is referenced/numbered.
- Where the problem is referenced with a single number.
- Where each equation has an individual reference.

Finally, it also allows a definition of any optimization problem without a limitless number of constraints.

4404 *optikz* – Customizable optical components for drawing laser setups and optical systems using TikZ

Web page on CTAN	https://ctan.org/pkg/optikz
name	optikz
caption	Customizable optical components for drawing laser setups and optical systems using TikZ
author	Beyer, Martin
copyright	Martin Beyer (2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0.0
description	(no language specified) This package provides a collection of TikZ-based commands for drawing laser setups and optical systems. It includes components such as lenses, mirrors, beamsplitters, cameras, spectrometers, detectors and more. Each element is highly customizable through optional key-value arguments (e.g. angle, width, thickness, color). Furthermore, rainbow and single color beams can be drawn to visualize beam size and dispersion in e.g. stretcher-compressor setups.

last access 2025-02-07

4410 *orderrefs* – Sort bibliography in LaTeX document by order of citation

Web page on CTAN <https://ctan.org/pkg/orderrefs>

name *orderrefs*

caption Sort bibliography in LaTeX document by order of citation

author Collins, John

license gpl = GNU General Public License (free)

description (no language specified) When the bibliography in a LaTeX document is made ‘by hand’ (i.e., without use of BibTeX), it is frequently necessary to reorder the items in the bibliography according to their order of citation. *Orderrefs* is a little program that automates this reordering. It is a portable Perl script that should run on any computer with a working Perl installation.

4411 *ordinalpt* – Counters as ordinal numbers in Portuguese

version	1.4.0 (2024-05-01)
last changes	2024-05-01
year	2024
description	(no language specified) This package automatically places a copyright notice as an un-numbered footnote on the title page of a document that calls <code>\maketitle</code> , indicating the information on the workshop where the paper was presented, along with additional information on the host conference, the license under which the document is published, and a link to the corresponding web page of the paper. The generated copyright notice contains a logo of the workshop, and a QR code that points to the paper's web page (to lead to further material). For cases when the copyright notice is not automatically set in the title page's footnote, the copyright notice can be set manually as well.

4436 *outliner* – Change section levels easily

Web page on CTAN	https://ctan.org/pkg/outliner
name	outliner
caption	Change section levels easily
author	Eijkhout, Victor
license	gpl = GNU General Public License (free)
version	0.94
description	(no language specified) Allows you to write ”\Level 2 {Some heading}” instead of the usual \section stuff; the definitions of the levels can then easily be changed. There is a mechanism for shifting all levels. This makes it easy to bundle existing articles into a compilation.
on CTAN	https://ctan.org/tex-archive/macros/latex/contrib/outliner
on MikTeX	outliner
on T _E XLive	outliner
keyword	headings (chapter, section, etc., heading styles)
language(s)	no language specified
year	without year
last access	2025-02-07

4437 outlines – Produce "outline" lists

Web page on CTAN <https://ctan.org/pkg/outlines>

name	outlines
caption	Produce "outline" lists
author	Pecheur, Charles
license	lppl = The LaTeX Project Public License (free)
version	1.1
description	(no language specified) Defines an outline environment, which allows outline-style indented lists with freely mixed levels up to four levels deep. It replaces the nested <code>begin / end</code> pairs by different item tags <code>\1</code> to <code>\4</code> for each nesting level. This is very convenient in cases where nested lists are used a lot, such as for to-do lists or presentation slides.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/outlines/outlines.pdf

4439 `outoruby` – Ruby with line break support for Japanese text

Web page on CTAN	https://ctan.org/pkg/outoruby
name	<code>outoruby</code>
caption	Ruby with line break support for Japanese text
author	kkotsi
copyright	kkotsi (2025)
license	gpl3 = GNU General Public License, version 3 (free)
version	0.0.1 (2025-03-14)
last changes	2025-03-14

4440 *oval* – Round-cornered framed boxes

year	2025
description	(no language specified) This package provides the <code>\outoruby</code> command, which supports line breaks when typesetting ruby anotations. It automatically switches between appropriate ruby forms at the beginning and the end of lines according to JIS X 4051 and JLReq. This package depends on pxrubrica and supports any engine that is supported by that package.
documentation	(Japanese) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/outoruby/outoruby.pdf

4440 *oval* – Round-cornered framed boxes

Web page on CTAN <https://ctan.org/pkg/oval>

name	oval
caption	Round-cornered framed boxes
author	Schalück, Elmar
copyright	Elmar Schalück (1991)
license	noinfo = noinfo
version	(1991-10-27)
last changes	1991-10-27
year	1991

description	(no language specified) The package seems somewhat feeble in its placement of the corner arcs. Metafont source of a replacement for the LaTeX circle-arc font is provided. The same author's loval package achieves better placement of the arcs.
on CTAN	https://ctan.org/tex-archive/macros/latex209/contrib/oval
keyword	boxing (creating boxes)
language(s)	no language specified
last access	2025-02-07

4441 **ovalfbox** – Boxes with frames whose corners are rounded

Web page on CTAN	https://ctan.org/pkg/ovalfbox
name	ovalfbox
caption	Boxes with frames whose corners are rounded
license	noinfo = noinfo
version	(1993-01-12)
last changes	1993-01-12
year	1993
description	(no language specified) The package defines a command <code>\ovalfbox</code> which seems more stable to the similar command in the package loval ; however, this package retains the problems with the positioning of multiline text in boxes.
on CTAN	https://ctan.org/tex-archive/macros/latex209/contrib/misc/ovalfbox.sty
keyword	boxing (creating boxes)
language(s)	no language specified
last access	2025-02-07

4442 overarrows – Custom extensible arrows over math expressions

Web page on CTAN <https://ctan.org/pkg/overarrows>

name	overarrows
caption	Custom extensible arrows over math expressions
author	Labbé, Julien
copyright	Julien Labbé (2024-2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.5 (2025-10-19)
last changes	2025-10-19
year	2025
description	(no language specified) A LaTeX package to create custom arrows over math expressions, mainly for vectors (but arrows can as well be drawn below). Arrows stretch with content, scale with math styles, and have a correct kerning when a subscript follows. Some predefined commands are also provided.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/overarrows/overarrows.pdf

4456 padcount – Pad numbers with arbitrary characters

Web page on CTAN <https://ctan.org/pkg/padcount>

name	padcount
caption	Pad numbers with arbitrary characters
author	Goodman, Donald P.
copyright	Donald P. Goodman (2018)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0
description	(no language specified) This package provides some simple macros which will pad numbers (or, indeed, any expanded token) with your choice of character (defaulting to "0") to your choice of number of places (defaults to "2"). This works not only on arabic numerals, but on any expanded list of tokens passed to it. This makes it suitable for, among other things, counters of all kinds.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/padcount/README
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/padcount/padcount.pdf
– local file	./3764316712-padcount.pdf
on CTAN	https://ctan.org/tex-archive/macros/latex/contrib/padcount
on MikTeX	padcount
on T _E XLive	padcount
keyword	numbers (formatting numbers, etc)
language(s)	no language specified
year	2018
last access	2025-02-07

4457 *pagecolor* – Interrogate page color

Web page on CTAN <https://ctan.org/pkg/pagecolor>

name	pagecolor
caption	Interrogate page color
author	Münch, Hans-Martin
copyright	H.-Martin Münch (2011-2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.2d (2025-01-28)
last changes	2025-01-28
year	2025
description	(no language specified) This package provides the command <code>\thepagecolor</code>, which gives the current page (background) color, i. e. the argument used with the most recent call of <code>\pagecolor{...}</code>. The command <code>\thepagecolornone</code> gives the same color as <code>\thepagecolor</code>, except when the page background color is "none" (e.g., as a result of using the <code>\nopagecolor</code> command). In that case <code>\thepagecolor</code> is "white" and <code>\thepagecolornone</code> is "none". When <code>\nopagecolor</code> is unknown or broken (crop package), this package provides a replacement. Similar to <code>\newgeometry</code> and <code>\restoregeometry</code> of the geometry package <code>\newpagecolor{...}</code> and <code>\restorepagecolor</code> are provided. For use with the crop package <code>\backgroundpagecolor{...}</code> as well as <code>\newbackgroundpagecolor{...}</code> and <code>\restorebackgroundpagecolor</code> are provided.

4460 *pagefoots* – Footnote numbering per page

Web page on CTAN <https://ctan.org/pkg/pagefoots>

name	<i>pagefoots</i>
caption	Footnote numbering per page
author	Hankerson, Darrel
author	Schellenberger, Brian T.
license	other-free = Free license not otherwise listed (free)
description	(no language specified) The code resets footnote numbers for each page, and ‘numbers’ footnotes using <code>\fnsymbol</code>. It needs two passes of LaTeX to ensure the renumbering is correct (as usual, it communicates information between passes using the <code>.aux</code> file). Note that the package was written for (old) LaTeX 2.09; its performance cannot be guaranteed with current LaTeX.
on CTAN	https://ctan.org/tex-archive/macros/latex209/contrib/misc/pagefoots.sty

keyword	footnote (footnote support)
see also	see section 2338 on page 2118: (<code>footmisc</code> – A range of footnote options)
see also	see section 4593 on page 4157: (<code>perpage</code> – Make a counter reset at every page boundary)
language(s)	no language specified
year	without year
last access	2025-02-07

4461 **pageframe** – Page frames, grids, etc., for LaTeX 2.09

Web page on CTAN <https://ctan.org/pkg/pageframe>

name	pageframe
caption	Page frames, grids, etc., for LaTeX 2.09
author	Smith, Cameron
license	noinfo = noinfo
version	(1991-11-14)
last changes	1991-11-14
year	1991
description	(no language specified) The package provides page frames, trim marks, and grids, as appropriate for preparing books for publication. Also provided are a means of specifying a "skeleton" (showing the arrangement of parts of the document) and a page grid. It should be noted that the package seems not to work with LaTeX 2e.

4462 pagegrid – Print page grid in backgroundWeb page on CTAN <https://ctan.org/pkg/pagegrid>

name	pagegrid
caption	Print page grid in background
author	Oberdiek, Heiko
copyright	Heiko Oberdiek (2009)
copyright	Oberdiek Package Support Group (2022)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.6 (2022-09-21)
last changes	2022-09-21
year	2022
description	(no language specified) This package puts a grid on the paper. It was written for developers of a class or package who have to put elements on definite locations on a page (e.g. letter class). The grid allows a faster optical check, whether the positions are correct. If the previewer already offers features for measuring, the package might be unnecessary. Otherwise it saves the developer from printing the page and measuring by hand. The package was part of the oberdiek bundle.

4463 *pagelayout* – Layout graphic rich documents

Web page on CTAN <https://ctan.org/pkg/pagelayout>

Alias	xput
name	pagelayout
caption	Layout graphic rich documents
author	Bartels, Friedemann
copyright	Friedemann Bartels (2022-2024)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1.1 (2024-07-31)
last changes	2024-07-31
year	2024
description	(no language specified) The <i>pagelayout</i> class enables you to layout pages declaratively using simple macros for pages, covers, grids, templates, text, and graphics to create graphic rich, perfectly typeset, and print ready PDFs. The integration of Inkscape allows you to create box shadows. The integration of ImageMagick allows you to configure compression and sharpening for bitmap graphics to export web, print or preview versions of your document. Parallelized image optimization, caching, and a draft mode enable fast PDF creation and a responsive workflow, even for large documents with lots of photos and graphics. The <i>pagelayout</i> class also integrates the PGF/TikZ and tcolorbox LaTeX packages.

4468 pagereference – Labels and references in Plain TeX

Web page on CTAN <https://ctan.org/pkg/pagereference>

name	pagereference
caption	Labels and references in Plain TeX
author	Ungar, Peter
license	noinfo = noinfo
version	(1994-05-02)
last changes	1994-05-02
year	1994
description	(no language specified) Provides a mechanism for recording the location of labels placed in a document. The package requires a two-pass process (it asks the user whether this is the "second pass"). The first pass establishes where things are (writing the values of page labels to a .pgn file), the second pass fills in the references. There is no equivalent of the LaTeX mechanism for checking whether labels have changed during a run.
on CTAN	https://ctan.org/tex-archive/macros/generic/misc/pagereference.tex
on MikTeX	genmisc
keyword	label-ref (label and reference systems)
language(s)	no language specified
last access	2025-02-07

4470 `pageslts` – Variants of last page labels

Web page on CTAN <https://ctan.org/pkg/pageslts>

name	<code>pagesLTS</code>
caption	Variants of last page labels
author	Münch, Hans-Martin
copyright	H.-Martin Münch (2010-2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.0e (2025-06-05)
last changes	2025-06-05
year	2025

description	(no language specified) The package was designed as an extension of the lastpage package — as well as that package’s <code>LastPage</code> label (created in hook <code>enddocument/afterlastpage</code> , formerly <code>\AtEndDocument</code>) it adds a <code>VeryLastPage</code> (created in the same hook, but formerly <code>\AfterLastShipout</code>). When more than one page numbering scheme is in operation (as in a <code>book</code> class document with <code>frontmatter</code>), the labels above do not give the total number of pages, so the package also provides labels <code>pagesLTS.< numbering scheme ></code> , where the <i>numbering scheme</i> is <code>arabic</code> , <code>roman</code> , etc. The package relies on the undolabl package. Note: The ”LTS” of the package name stands for: ”L” = number of Last page, ”T” = Total number of pages, ”S” = page numbering Schemes (<code>roman</code>, <code>arabic</code>, ...)

4482 **papermas** – Compute the mass of a printed version of a document

Web page on CTAN <https://ctan.org/pkg/papermas>

name	papermas
caption	Compute the mass of a printed version of a document
author	Münch, Hans-Martin
copyright	H.-Martin Münch (2010-2023)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1a (2023-04-12)
last changes	2023-04-12
year	2023
description	(no language specified) The package computes the number of sheets of paper used by, and hence the mass of a document. This is useful (for example) when calculating postal charges.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/papermas/README

4512 *patch* – Patch loaded packages, etc

Web page on CTAN <https://ctan.org/pkg/patch>

name *patch*
 caption Patch loaded packages, etc
 author Kastrup, David
 copyright David Kastrup (1994)
 license lppl = The LaTeX Project Public License (free)
 description (no language specified) The package defines macros that allow patching of existing commands, specifying those parts of the existing macro to be replaced, along with the replacements. Thus it provides more sophisticated manipulation than a package like *patchcmd*, which only permits modification by adding commands at the beginning or end of an existing definition.

The package is distributed in a relative of LaTeX doc format: it will run unmodified, though it benefits from docstrip treatment.

on CTAN <https://ctan.org/tex-archive/macros/generic/misc/patch.doc>

4514 patgen – Generate hyphenation patterns

Web page on CTAN <https://ctan.org/pkg/patgen>

name	patgen
caption	Generate hyphenation patterns
author	Liang, Franklin M.
author	The TeX Live Team
author	Rokicki, Tom
author	Breitenlohner, Peter
license	pd = Public Domain Software (free)
version	2.4
description	(no language specified) Patgen takes a list of hyphenated words and generates a set of patterns that can be used by the TeX 82 hyphenation algorithm. Patgen was originally written by Frank M. Liang as part of his Stanford Ph.D. work, and has always been distributed alongside the other programs coming from the Stanford TeX project. It was updated in 1991 by Peter Breitenlohner for the new 8-bit features of TeX version 3. (These updates related to input/output and programming overhead; the actual pattern generation algorithms were not changed.) Patgen is currently maintained as part of TeX Live.

4520 *pax* – Extract and reinsert PDF annotations with pdfTeX

Web page on CTAN <https://ctan.org/pkg/pax>

name	pax
caption	Extract and reinsert PDF annotations with pdfTeX
author	Roucariès, Bastien
author	Oberdiek, Heiko
copyright	Bastien Roucariès (2020)
copyright	Heiko Oberdiek (2006-2012)
license	lppl = The LaTeX Project Public License (free)
license	gpl = GNU General Public License (free)
version	(2022-06-07)
last changes	2022-06-07
year	2022
description	(no language specified) If PDF files are included using pdfTeX, PDF annotations are stripped. The pax project offers a solution without altering pdfTeX. A Java program (pax.jar) parses the PDF file that will later be included. The program then writes the data of the annotations into a file that can be read by TeX. The LaTeX package pax extends the graphics package to support the scheme: if a PDF file is included, the package looks for the file with the annotation data, reads them and puts the annotations in the right place. Project status: experimental

4522 *pbalance* – Balance last page in two-column mode

Web page on CTAN <https://ctan.org/pkg/pbalance>

name *pbalance*
caption Balance last page in two-column mode
author Lago, Nelson
copyright Nelson Lago (2020-2022)
license lpl1.3c = The LaTeX Project Public License 1.3c (free)
version 1.4.0 (2022-07-28)
last changes 2022-07-28
year 2022
description (no language specified) This package balances the columns on the last page of a two-column document. If the page is "simple" (no footnotes, floats, or marginpars), it uses the **balance** package; otherwise, it uses `\enlargethispage` to make the left column shorter, balancing the columns.

4530 *pcarl* – LaTeX Support for Adobe Caslon Open Face

Web page on CTAN <https://ctan.org/pkg/pcarl>

name	<code>pcarl</code>
caption	LaTeX Support for Adobe Caslon Open Face
author	Veytsman, Boris
copyright	Boris Veytsman (2010)
license	other-free = Free license not otherwise listed (free)
version	1.0a
description	(no language specified) The package provides LaTeX support for using Caslon Open Face. Caslon Open Face font was designed by Barnhart Brothers and Spindler in 1915. It was initially called College Oldstyle and based on Le Moreau de Jeune from G. Peignot foundry. Its relation to the classical Caslon font family is rather distant. Nevertheless it is a nice titling and display font. Adobe sells an OpenType version of this font, but other versions, including Adobe Type 1 are still available from other vendors, including fonts.com. Note that there are many "free" variants of this font available on the web; the package addresses the commercial product(s).
documentation	(no language specified) <i>Readme:</i> https://ctan.org/tex-archive/fonts/pcarl/README
documentation	(no language specified) <i>Simple font sample:</i> https://ctan.org/tex-archive/fonts/pcarl/pcarlsample.pdf

4533 *pdbf-toolkit* – A Toolkit for Creating Janiform Data DocumentsWeb page on CTAN <https://ctan.org/pkg/pdbf-toolkit>

name	pdbf-toolkit
caption	A Toolkit for Creating Janiform Data Documents
author	Bender, Patrick
license	mit = MIT License (free)
version	1.2.5

description	(no language specified) PDBF documents are a hybrid format. They are a valid PDF and a valid HTML page at the same time. You can now optionally add an VirtualBox OVA file with a complete operating system to the PDBF document. This means that the resulting file is a valid PDF, HTML, and OVA file at the same time. If you change the file extension to PDF and open it with an PDF viewer, you can see the static part of the document. If you change the file extension to HTML and open it with a Browser (currently Chrome, Firefox, Safari, and IE 10 are supported), you can see the dynamic part of the document. And if an ova file is attached you can also change the file extension to OVA and install and run the attached operating system. The difference between the PDF and the HTML version is that the PDF version contains a static version of all PDBF elements, whereas the HTML version is dynamic. For example you can zoom into graphs, temporarily remove dataseries from the graph, inspect and change the underling query of the PDBF element and see the result of the change directly in the browser. This approach works completely offline. No internet connection is required, neither at compile time, nor at viewing time. The toolkit is licensed under the MIT License.

Web page on CTAN <https://ctan.org/pkg/pdfbook2>

name	pdfbook2
caption	Create booklets from PDF files
author	Neumann, Johannes
copyright	Johannes Neumann (2015-2020)
license	gpl3 = GNU General Public License, version 3 (free)
version	1.4

description	(no language specified) This python program creates print-ready PDF files from some input PDF files for booklet printing. The resulting files need to be printed in landscape/long edge double sided printing. The default paper format depends on the locale and is chosen by pdfjam. It can be chosen using the <code>-paper</code> option. Before the pdf is composed, the input file is cropped to the relevant area in order to discard unnecessary white spaces. In this process, all pages are cropped to the same dimensions. Extra margins can be defined at the edges of the booklet and in the middle where the binding occurs. The output is written to INPUT-book.pdf. Existing files will be overwritten. All input files are processed separately.

description	(no language specified) Since version 1.40 pdfTeX supports colour stacks. The driver file <code>pdftex.def</code> for package color defines and uses a main colour stack since version v0.04b. This package is intended for package writers. It defines macros for setting and maintaining new colour stacks.

year	2019
description	(no language specified) The package used to provide macros that emulated the ‘colour stack’ functionality of dvips. The colour stack deals with colour manipulations when asynchronous events (like page-breaking) occur. At the time the package was written, pdfTeX did not (yet) have such a stack, though dvips had had one for a long time. This package was an experimental solution to the problem, and worked best with pdf_eTeX. For current releases of pdfTeX (later than version 1.40.0, released in 2007), this package is not needed, since “real” colour stacks are available. The present

4545 `pdfcolparallel` – Fix colour problems in package ‘parallel’

`pdfcolmk` is therefore just an empty stub that does nothing at all, just in case there are still documents that reference it.

The documented source of the original package is still available at the [github repository](#).

4547 pdfcomment – A user-friendly interface to pdf annotations

Web page on CTAN <https://ctan.org/pkg/pdfcomment>

name	pdfcomment
caption	A user-friendly interface to pdf annotations
author	Kleber, Josef
copyright	Josef Kleber (2008-2016)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.4a
description	(no language specified) For a long time pdfLaTeX has offered the command <code>\pdfannot</code> for inserting arbitrary PDF annotations. However, the command is presented in a form where additional knowledge of the definition of the PDF format is indispensable. This package is an answer to the – occasional – questions in newsgroups, about how one could use the comment function of Adobe Reader. At least for the writer of LaTeX code, the package offers a convenient and user-friendly means of using <code>\pdfannot</code> to provide comments in PDF files. Since version v1.1, pdfcomment.sty also supports LaTeX → dvips → ps2pdf, LaTeX → dvipdfmx, XeLaTeX and LuaLaTeX. Unfortunately, support of PDF annotations by PDF viewers may vary. The reference viewer for the development of this package is Adobe Reader.

4552 pdfextra – Extra PDF features for (Op)TeXWeb page on CTAN <https://ctan.org/pkg/pdfextra>

name pdfextra

caption Extra PDF features for (Op)TeX

author Vlasák, Michal

copyright Michal Vlasák (2021)

license other-free = Free license not otherwise listed (free)

version 0.3

description (no language specified) This package provides extra PDF features for **OpTeX** (or in limited form for plain LuaTeX and LuaLaTeX).

As a minimalistic format, **OpTeX** does not support "advanced" features of the PDF file format in its base. This third party package aims to provide them.

Summary of supported features:

- insertion of multimedia (audio, video, 3D),
- hyperlinks and other actions,
- triggering events,
- transitions,
- attachments.

documentation (no language specified) *Example of use:*

4559 pdfoverlay – A LaTeX style for overlaying text on a PDF

Web page on CTAN <https://ctan.org/pkg/pdfoverlay>

name	pdfoverlay
caption	A LaTeX style for overlaying text on a PDF
author	Purton, David
copyright	David Purton (2018-2022)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.3 (2022-08-27)
last changes	2022-08-27
year	2022
description	(no language specified) It is often desirable to take an existing PDF and easily add annotations or text overlaying the PDF. This might arise if you wish to add comments to a PDF, fill in a PDF form, or add text to a PDF where space has been left for notes. This package provides a simple interface to do this without having to resort to inserting one page at a time. Some or all of the pages of the PDF can be included and not all pages of the PDF need have overlayed text. It is also possible to include text <i>between</i> pages of the PDF. Another advantage of this package is that the overlayed text can be set as normal flowing from one page to another or with manual page breaks if you wish. It is also possible to use any standard method to position text at arbitrary places on a given page.

4561 pdfpages – Include PDF documents in LaTeXWeb page on CTAN <https://ctan.org/pkg/pdfpages>

name	pdfpages
caption	Include PDF documents in LaTeX
author	Matthias, Andreas
copyright	Andreas Matthias (2001-2026)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.6h (2026-03-30)
last changes	2026-03-30
year	2026
description	(no language specified) This package simplifies the inclusion of external multi-page PDF documents in LaTeX documents. Pages may be freely selected and similar to <code>psnup</code> it is possible to put several logical pages onto each sheet of paper. Furthermore a lot of hypertext features like hyperlinks and article threads are provided. The package supports pdfTeX (pdfLaTeX) and VTeX. With VTeX it is even possible to use this package to insert PostScript files, in addition to PDF files.

4567 pdfreview – Annotate PDF files with margin notes

Web page on CTAN <https://ctan.org/pkg/pdfreview>

name	pdfreview
caption	Annotate PDF files with margin notes
author	Palmer, Michael
license	lpl = The LaTeX Project Public License (free)
version	1.2 (2019-02-22)
last changes	2019-02-22
year	2019

description	(no language specified) This package lets you add comments in the page margins of PDF files, e.g. when reviewing manuscripts or grading reports. The PDF file to be annotated is included, one page at a time, as graphics, in a manner similar to the <code>pdfpages</code> package. Notes are placed in the margin next to the included graphics using a grid of help lines. Alternatively, only numbers are placed in the page margins, and the notes are collected into a numbered list at the end of the document. Note that this package is <i>not</i> intended for adding notes directly to the LaTeX source of the document that is being reviewed; instead, the document undergoing review is already in PDF format and remains unchanged. Also note that this package does not produce the usual PDF “sticky notes” that must be opened by clicking on them; instead, the notes are simply shown as text. This package depends on the following other LaTeX package: <code>adjustbox</code> , <code>calc</code> , <code>geometry</code> , <code>graphicx</code> , <code>grfile</code> , <code>ifthen</code> , <code>kvoptions</code> , <code>tikz</code> , <code>ulem</code> , and <code>xstring</code> .

4569 pdfslide – Presentation slides using pdfTeX

Web page on CTAN <https://ctan.org/pkg/pdfslide>

name	pdfslide
caption	Presentation slides using pdfTeX
author	Radhakrishnan, C. V.
license	lppl = The LaTeX Project Public License (free)
description	(no language specified) This is a package for use with pdfTeX, to make nice presentation slides. Its aims are: to devise a method for easier technical presentation; to help the mix of mathematical formulae with text and graphics which other present day document processing tools fail to accomplish; to exploit the platform independence of TeX so that presentation documents become portable; and to offer the freedom and possibilities of using various backgrounds and other embellishments that a user can imagine to have in as presentation. The package can make use of the facilities of the PPower4 post-processor.

4577 pdftoolbox – A plain-pd $\TeX$ toolbox for creating beautiful documentsWeb page on CTAN <https://ctan.org/pkg/pdftoolbox>

name	pdfToolbox
caption	A plain-pd $\TeX$ toolbox for creating beautiful documents
author	Feiglin, Ari
license	mit = MIT License (free)
version	0.2
description	(no language specified) pdfToolbox is a toolbox of various "subpackages" intended for programming and creating beautiful plain-pd$\TeX$ documents. It is an amalgamation of the following "subpackages" (in the future there will be an ability to access each one by itself): 1. pdfData — for storing and manipulating data; 2. pdfDstruct — for managing the layout and structure of your document; 3. pdfGraphics — for adding some color and illustrations to your document. pdfToolbox currently only works with pdf$\TeX$. It is not compatible with any form of LaTeX, and currently does not work with Xe$\TeX$ or Lua$\TeX$ (though hopefully Lua$\TeX$ support will be added in the future).
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/pdftex/plain/pdftoolbox/README.md

4578 pdftricks – Support for PSTricks in pdfTeX

Web page on CTAN <https://ctan.org/pkg/pdftricks>

name	pdftricks
caption	Support for PSTricks in pdfTeX
author	Radhakrishnan, C. V.
author	Rajagopal, C. V.
license	gpl = GNU General Public License (free)
version	1.16
description	(no language specified) The PSTricks macros cannot be used (directly) with pdfTeX, since PSTricks uses PostScript arithmetic, which isn't part of PDF. This package circumvents this limitation so that the extensive facilities offered by the powerful PSTricks package can be made use of in a pdfTeX document. This is done using the shell escape function available in current TeX implementations. The package may also be used in support of other 'PostScript-output-only' packages, such as PSfrag . For alternatives, users may care to review the discussion in the PSTricks online documentation .

4584 *pegmatch* – Parsing Expression Grammars for TeX

Web page on CTAN <https://ctan.org/pkg/pegmatch>

name	pegmatch
caption	Parsing Expression Grammars for TeX
author	Lyu, Jianrui
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2025B (2025-02-16)
last changes	2025-02-16
year	2025
description	(no language specified) This package ports PEG (Parsing Expression Grammars) to TeX. Following the design in LPEG (Parsing Expression Grammars for Lua), it defines patterns as LaTeX3 variables, and offers several operators to compose patterns. In general, PEG matching is much more powerful than RE (Regular Expressions) matching.

4588 *penrose* – A TikZ library for producing Penrose tilings

Web page on CTAN <https://ctan.org/pkg/penrose>

name	penrose
caption	A TikZ library for producing Penrose tilings
author	Stacey, Andrew
copyright	Andrew Stacey (2014-2019)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.4
description	(no language specified) This package provides a TikZ library for drawing Penrose tiles. It currently supports the kite/dart, rhombus, and pentagon tile sets. There are two main methods for their placement: one that automatically generates a tiling, and one that allows for "by hand" placement. Furthermore, the tiles themselves can be deformed and will still (hopefully!) fit together in the correct fashion. This package is now superseded by package tilings , which deals with more extensive tiles than just the Penrose tile sets.

4590 *perfectcut* – Nested delimiters that consistently grow regardless of the contents

Web page on CTAN <https://ctan.org/pkg/perfectcut>
name *perfectcut*
caption Nested delimiters that consistently grow regardless of the contents
author Munch-Maccagnoni, Guillaume
license lpl1.3 = The LaTeX Project Public License 1.3 (free)
version 2.3

description	(no language specified) This package defines the command <code>\perfectcut#1#2</code> which displays a bracket <code><#1 #2></code>. Various other delimiters are similarly defined (parentheses, square brackets ...). The effect of these commands is to let the delimiters grow according to the number of nested <code>\perfectcommands</code> (regardless of the size of the contents). The package was originally intended for solving a notational issue for direct-style continuation calculi in proof theory. For general use, the package also defines commands for defining other sorts of delimiters which will behave in the same way (see example in the documentation). The package also offers a robust reimplementaion of <code>\big</code>, <code>\bigg</code>, etc.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/perfectcut/perfectcut.pdf

4591 perltex – Define LaTeX macros in terms of Perl code

Web page on CTAN <https://ctan.org/pkg/perltex>

name	perltex
caption	Define LaTeX macros in terms of Perl code
author	Pakin, Scott
copyright	Scott Pakin (2003-2024)
license	lppl = The LaTeX Project Public License (free)
version	2.3
description	(no language specified) PerlTeX is a combination Perl script (perltex.pl) and LaTeX2e package (perltex.sty) that, together, give the user the ability to define LaTeX macros in terms of Perl code. Once defined, a Perl macro becomes indistinguishable from any other LaTeX macro. PerlTeX thereby combines LaTeX's typesetting power with Perl's programmability. PerlTeX will make use of persistent named pipes, and thereby run more efficiently, on operating systems that offer them (mostly Unix-like systems). Also provided is a switch to generate a PerlTeX-free, document-specific, noperltex.sty that is useful when distributing a document to places where PerlTeX is not available.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/perltex/perltex.pdf
– local file	./8981492990-perltex.pdf
