description	(no language specified) This is a LaTeX package allowing Feynman diagrams to be easily generated within LaTeX with minimal user instructions and without the need of external programs. It builds upon the TikZ package and leverages the graph placement algorithms from TikZ in order to automate the placement of many vertices. <code>tikz-feynman</code> allows fine-tuned placement of vertices so that even complex diagrams can still be generated with ease.

6132 *tikz-karnaugh* – Typeset Karnaugh maps using TikZ

Web page on CTAN <https://ctan.org/pkg/tikz-karnaugh>

name	<code>tikz-karnaugh</code>
caption	Typeset Karnaugh maps using TikZ
author	Laus, Luís Paulo
copyright	Luis Paulo Laus (2017-2022)
license	lpl1 = The LaTeX Project Public License 1 (free)

version	1.5 (2022-02-15)
last changes	2022-02-15
year	2022
description	(no language specified) The <code>tikz-karnaugh</code> package is a LaTeX package used to draw Karnaugh maps. It uses TikZ to produce high quality graph from 1 to 12 variables, but this upper limit depends on the TeX memory usage and can be different for you. It is very good for presentation since TikZ allows for a better control over the final appearance of the map. You can control colour, styles and distances. It can be considered as an upgrade and extension of Andreas W. Wieland's <code>karnaugh</code> package towards TikZ supporting. Upgrade because uses TikZ for more option on typesetting and overall higher quality. Extension because it also supports American style and inputting the values as they would appear in the map or in the truth table. Complex maps with solution (implicants) pointed out can be generated with external java software (see documentation for details). It supports both American and traditional (simplified labels) styles and from version 1.3 on American style is natively supported, therefore, no more addition work is required to typeset Gray coded labels, variable names etc. From version 1.4, two new macros allow typesetting a map much more similarly as it should appear. Original order, as the values appear in the truth table, still being supported.

6144 *tikz-palattice* – Draw particle accelerator lattices with TikZ

Web page on CTAN <https://ctan.org/pkg/tikz-palattice>

name	tikz-palattice
caption	Draw particle accelerator lattices with TikZ
author	Schmidt, Jan
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.3 (2017-03-09)
last changes	2017-03-09
year	2017
description	(no language specified) This package allows for drawing a map of a particle accelerator just by giving a list of elements — similar to lattice files for simulation software. The package includes 12 common element types like dipoles, quadrupoles, cavities, or screens, as well as automatic labels with element names, a legend, a rule, and an environment to fade out parts of the accelerator. The coordinate of any element can be saved and used for custom TikZ drawings or annotations. Thereby, lattices can be connected to draw injection/extraction or even a complete accelerator facility.

name	TikZ-planets
caption	Illustrate celestial mechanics and the solar system
author	Santos, Isabelle M.
license	cc-by-sa-4 = CC BY-SA 4.0 (free)
version	1.0.2 (2020-04-19)
last changes	2020-04-19
year	2020
description	(no language specified) This TikZ-package makes it easy to illustrate celestial mechanics and the solar system. You can use it to draw sketches of the eclipses, the phases of the Moon, etc. The package requires the standard packages TikZ , xcolor , xstring , and pgfkeys .

6146 *tikz-qtree* – Use existing *qtree* syntax for trees in TikZ

Web page on CTAN <https://ctan.org/pkg/tikz-qtree>

name	<code>tikz-qtree</code>
caption	Use existing <i>qtree</i> syntax for trees in TikZ
author	Chiang, David
copyright	David Chiang (2002, 2009)
license	gpl = GNU General Public License (free)
version	1.2
description	(no language specified) The package provides a macro for drawing trees with TikZ using the easy syntax of Alexis Dimitriadis' Qtree . It improves on TikZ's standard tree-drawing facility by laying out tree nodes without collisions; it improves on <i>Qtree</i> by adding lots of features from TikZ (for example, edge labels, arrows between nodes); and it improves on pst-qtree in being usable with pdfTeX and XeTeX.

caption	TikZ library for typesetting electrical diagrams
author	Laus, Luís Paulo
copyright	Luis Paulo Laus (2018-2022)
license	lpl1 = The LaTeX Project Public License 1 (free)
version	1.3 (2022-08-07)
last changes	2022-08-07
year	2022
description	(no language specified) This package contains a collection of symbols for typesetting electrical wiring diagrams for relay control systems. The symbols are meant to be in agreement with the international standard IEC-60617 which has been adopted worldwide, with perhaps the exception of the USA. It extends and modifies, when needed, the TikZ-library <code>circuits.ee.IEC</code> . A few non-standard symbols are also included mainly to be used in presentations, particularly with the beamer package.

 license lpl1 = The LaTeX Project Public License 1 (free)
 version 1.0.1 (2018-12-15)
 last changes 2018-12-15
 year 2018
 description (no language specified) This package contains a collection of symbols for typesetting Sequential Function Chart (SFC) diagrams in agreement with the international standard IEC-61131-3/2013. It includes steps (normal and initial), transitions, actions and actions qualifiers (with and without time duration). It extends the circuit library of TikZ and allows you to draw an SFC diagram in same way you would draw any other circuit.

Web page on CTAN <https://ctan.org/pkg/tikzlings>

name	TikZlings
caption	A collection of cute little animals and similar creatures
author	samcarter
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.5 (2025-12-11)
last changes	2025-12-11
year	2025
description	(no language specified) A collection of LaTeX packages for drawing cute little animals and similar creatures using TikZ .

Currently, the following TikZlings are included:

- anteater
- ape
- bat
- bear
- bee
- bug
- cat
- chicken
- coati
- dog
- elephant
- hippo
- koala
- marmot
- meerkat
- mole
- mouse
- owl
- panda

- penguin
- pig
- rhino
- sheep
- sloth
- snowman
- squirrel
- turkey
- wolf

These little drawings can be customized in many ways.

6183 *tilings* – A TikZ library for drawing tiles and tilings

Web page on CTAN <https://ctan.org/pkg/tilings>

name	<code>tilings</code>
caption	A TikZ library for drawing tiles and tilings
author	Stacey, Andrew
copyright	Andrew Stacey (2014-2023)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.0
description	(no language specified) This package provides a TikZ library for working with tiles, tilings, and tessellations. Using it, one can define tiles, place tiles, deform tiles, and — in some cases — apply replacement rules to generate tessellations. It has pre-defined tiles for most of the Penrose tile sets and the aperiodical polykite tiles. This is a replacement for the penrose package, renamed as it now deals with more extensive tiles than just the Penrose tile sets.

6199 *tipauni* – Producing Unicode characters with TIPA commandsWeb page on CTAN <https://ctan.org/pkg/tipauni>

name	<code>tipauni</code>
caption	Producing Unicode characters with TIPA commands
author	निरंजन
copyright	निरंजन (2021-2023)
license	gpl3+ = GNU General Public License, version 3 or newer (free)
license	fdl = Free Documentation License (free)

version	0.7a (2023-02-13)
last changes	2023-02-13
year	2023
description	(no language specified) Package TIPA uses the T3 encoding for producing IPA characters. The package is widely used in the field of linguistics, but because of the old encoding, the output documents are less productive than Unicode-based documents. This package redefines most of the TIPA -commands for outputting Unicode characters. Users can now use their beloved TIPA shortcuts with the benefits of Unicode, i.e. searchability, copy-pasting, changing the font and many more. As this package needs the fontspec package for loading an IPA font, it needs to be compiled with XeLaTeX or LuaLaTeX. This package can also be viewed as an ASCII-based input method for producing IPA characters in Unicode. It needs the New Computer Modern font for printing IPA characters.

Web page on CTAN	https://ctan.org/pkg/titlecaps
name	titlecaps
caption	Setting rich-text input into Titling Caps
author	Segletes, Steven B.
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.3 (2022-04-12)
last changes	2022-04-12
year	2022

description	(no language specified) The package is intended for setting rich text into titling capitals (in which the first character of words are capitalized). It automatically accounts for diacritical marks (like umlauts), national symbols (like "ae"), punctuation, and font changing commands that alter the appearance or size of the text. It allows a list of predesignated words to be protected as lower-cased, and also allows for titling exceptions of various sorts.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/titlecaps/README

6222 *tkz-elements* – A Lua library for drawing Euclidean geometry with TikZ or tkz-euclide

Web page on CTAN <https://ctan.org/pkg/tkz-elements>

name *tkz-elements*
caption A Lua library for drawing Euclidean geometry with TikZ or tkz-euclide
author Matthes, Alain
copyright Alain Matthes (2024-2025)
license lpl1.3 = The LaTeX Project Public License 1.3 (free)
version 3.10c
description (no language specified) This package provides a library written in Lua, allowing to make all the necessary calculations to define the objects of a Euclidean geometry figure. You need to compile with LuaLaTeX. The definitions and calculations are only done with Lua.
The main possibility of programming proposed is oriented "object programming" with object classes like point, line, triangle, circle and ellipse. For the moment, once the calculations are done, it is *tkz-euclide* or *TikZ* which allows the drawings.

6233 tlaunch – A Windows GUI to run a networked TeX Live as if installed locallyWeb page on CTAN <https://ctan.org/pkg/tlaunch>

name	tlaunch
caption	A Windows GUI to run a networked TeX Live as if installed locally
author	Kroonenberg, Siep
copyright	Siep Kroonenberg (2017)
license	gpl3+ = GNU General Public License, version 3 or newer (free)
version	0.5.3 (2017-06-29)
last changes	2017-06-29
year	2017
description	(no language specified) TLaunch, or the TeX Live launcher, is a Windows GUI to run a shared or networked TeX Live. It takes care of all the configuration which would be done otherwise by a local installer. The interface and file associations are configured via an ini file, which can be edited to give access to additional TeX-related software. The author told us in March 2023: "Please move tlaunch to obsolete. It is TeX Live-specific, and already part of the wintools package. Therefore a CTAN package is not terribly useful."
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/obsolete/support/tlaunch/tlaunch.pdf

Web page on CTAN <https://ctan.org/pkg/tocdata>

name	tocdata
caption	Adds names to chapters, sections, figures in the TOC and LOF
author	Dunn, Brian
copyright	Brian Dunn (2016-2024)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.07 (2024-01-20)
last changes	2024-01-20
year	2024
description	(no language specified) The <i>tocdata</i> package may be used to add a small amount of data to an entry in the table of contents or list of figures, between the section or caption name and the page number. The typical use would be to add the name of an author or artist of a chapter or section, such as in an anthology or a collection of papers. Additionally, user-level macros are provided which add the author's name to a chapter or section, along with an optional prefix and/or suffix, and add to a figure the artist's name, prefix, and suffix, plus optional additional text. Author and artist names are also added to the index. Additional user-level macros control formatting. <i>tocdata</i> works with the TOC/LOF formatting of the default LaTeX classes, memoir, koma-script, and with titletoc, tocloft, tocbasic, and toctyle.

6258 *tokcycle* – Build tools to process tokens from an input stream

Web page on CTAN <https://ctan.org/pkg/tokcycle>

name	tokcycle
caption	Build tools to process tokens from an input stream
author	Segletes, Steven B.
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.42 (2021-08-25)
last changes	2021-08-25
year	2021

description	(no language specified) The tokcycle package helps one to build tools to process tokens from an input stream. If a macro to process an arbitrary single token can be built, then tokcycle can provide a wrapper for cycling through an input stream (including macros, spaces, and groups) on a token-by-token basis, using the provided macro on each successive character. tokcycle characterizes each successive token in the input stream as a Character, a Group, a Macro, or a Space. Each of these token categories are processed with a unique directive, to bring about the desired effect of the token cycle. If condition flags are provided to identify active, implicit, and catcode-6 tokens as they are digested. The package provides a number of options for handling groups.

6259 tokenizer – A tokenizer

Web page on CTAN <https://ctan.org/pkg/tokenizer>

name	tokenizer
caption	A tokenizer
author	Herpers, Sascha
license	lppl = The LaTeX Project Public License (free)
version	1.1.0
description	(no language specified) A tokenizer for LaTeX. <code>\GetTokens{Target1}{Target2}{Source}</code> splits source into two tokens at the first encounter of a comma. The first token is saved in a newly created command with the name passed as <code><Target1></code> and the second token likewise. A package option ‘trim’ causes leading and trailing space to be removed from each token; with this option, the <code>\TrimSpaces</code> command is defined, which removes leading and trailing spaces from its argument.

6262 tokmap – Iterate over a token list expandably, without dropping spaces or braced groupsWeb page on CTAN <https://ctan.org/pkg/tokmap>

name	tokmap
caption	Iterate over a token list expandably, without dropping spaces or braced groups
author	plante
copyright	plante (2025)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0
description	(no language specified) Usage: <code>\tokmap <command> { <tokens> }</code> applies <code>command</code> over the token list <code>tokens</code>. Space tokens, left and right braces are replaced with the marker tokens <code>\tokmap@space</code>, <code>\tokmap@bgroup</code>, and <code>\tokmap@egroup</code> respectively (which are <code>\ifx</code>-equal to themselves exclusively). For convenience, <code>command</code> may contain multiple tokens. It is assumed that <code>{</code> and <code>}</code> are the only characters with category codes 1 (beginning of group) and 2 (end of group) respectively. Expandable. This package may be used in LaTeX by <code>\usepackage{tokmap}</code>, or in plain TeX and other formats by <code>\input{tokmap}</code>. See the visualtoks package for an example application.

6263 tokstools – Tools for manipulating tokens

Web page on CTAN <https://ctan.org/pkg/tokstools>

name tokstools

caption Tools for manipulating tokens

author Tellechea, Christian

copyright Christian Tellechea (2026)

license lpl1.3c = The LaTeX Project Public License 1.3c (free)

version 0.2

description (no language specified) This package is still in the experimental stage. Therefore, its behavior is not guaranteed to match the description in the manual, and bugs of varying severity may occur.

Additionally, some features, as well as their syntax, may be subject to change.

It requires any modern engine that supports etex primitives and can therefore be used with either TeX or LaTeX.

The tokstools package provides tools for manipulating tokens and implements "PEG"-style grammars in TeX. Predefined elementary patterns can be combined to form grammars that search for matches within tokens.

Two categories of macros are provided:

- those operating on individual tokens (`\toksdo`, `\tokscount`, and `\printtoks`);
- those operating on tokens that have matched a grammar (`\ifpegmatch`, `\pegcount`, and `\pegreplace`)

6272 toptesi – Bundle for typesetting multilanguage theses

Web page on CTAN <https://ctan.org/pkg/toptesi>

name	TOPTesi
caption	Bundle for typesetting multilanguage theses
author	Beccari, Claudio
copyright	Claudio Beccari (2005-2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	6.4.07
description	(no language specified) This bundle contains everything needed for typesetting a bachelor, master, or PhD thesis in Italian (or in any other language supported by LaTeX: the bundle is constructed to support multilingual use). The infix strings may be selected and specified at will by means of a configuration file, so as to customize the layout of the front page to the requirements of a specific university. Thanks to its language management, the bundle is suited for multilanguage theses that are becoming more and more frequent thanks to the double degree programs of the European Community Socrates programs. Toptesi is designed to save the PDF version of a thesis in PDF/A-1b compliant mode and with all the necessary metadata.

version 1.5

description (no language specified) TpX is a lightweight, easy-to-use graphical editor for Windows platform for creating drawings and including them into TeX files in publication-ready form. It can also be used as a stand-alone editor for vector graphics.

The output is a file (with extension .TpX) containing the drawing as TeX code or as an `\includegraphics` link to an external file created by the program. The user can choose between several output formats. TpX saves its own data in TeX file comments so that the drawing can be loaded into TpX and edited again. This internal TpX format is based on XML and can easily be understood and edited.

TpX can import EMF/WMF pictures created by other Windows applications, including many applications producing scientific graphs. In most cases the result is nice, though sometimes the imported picture needs some manual editing. So TpX can be used as an EMF-to-any converter.

6282 trace – Make sensible use of TeX tracing in LaTeX

Web page on CTAN <https://ctan.org/pkg/trace>

name	trace
caption	Make sensible use of TeX tracing in LaTeX
author	The LaTeX Project Team
author	Mittelbach, Frank
copyright	The LaTeX Project (1993-2023)
copyright	Frank Mittelbach (1999-2019)

license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1f (2021-04-18)
last changes	2021-04-18
year	2021
description	(no language specified) The package provides the means to suppress excessive (and usually unnecessary) tracing inside some particularly verbose parts of LaTeX (such as the font selection routines, or the calc package’s parsing of expressions). The package therefore redefines a number of key commands to turn off tracing while they execute (those the author finds most annoying and noisy). Since it potentially modifies the content of other packages, the package should be loaded last in a document’s preamble. The package is part of the latex-tools bundle in the LaTeX required distribution.

year	2021
description	(no language specified) This LaTeX package provides a flexible mechanism for translating individual words into different languages. For example, it can be used to translate a word like "figure" into, say, the German word "Abbildung". Such a translation mechanism is useful when the author of some package would like to localize the package such that texts are correctly translated into the language preferred by the user. This package is not intended to be used to automatically translate more than a few words.

Web page on CTAN <https://ctan.org/pkg/transparent-io>

name	Transparent-IO
caption	Show for approval the filenames used in <code>\input</code> , <code>\openin</code> , or <code>\openout</code>
author	Wermuth, Udo
copyright	Udo Wermuth (2022)
license	gpl3 = GNU General Public License, version 3 (free)
version	(2022-04-30)
last changes	2022-04-30
year	2022
description	(no language specified) This package provides macros to make the file I/O in plain TeX more transparent. That is, every <code>\input</code>, <code>\openin</code>, and <code>\openout</code> operation by TeX is presented to the user who must check carefully if the file name of the source is acceptable. The user must sometimes enter additional text and has to specify the file name that the TeX operation should use. The macros require a complex installation procedure; the package contains <code>sed</code> and <code>bash</code> scripts to do this on a UNIX-like operating system. Every installation is different from any other as password-protected macro names and private messages have to be chosen by the installer. Therefore, the files in the package cannot be used directly. The files carry the extension <code>.org</code>, and only after the user has performed an individual customization for a private installation the

changed files are renamed and have the extension `.tex`. For details see the manual.

6346 *tudscr* – Corporate Design of Technische Universität Dresden

Web page on CTAN <https://ctan.org/pkg/tudscr>

name	tudscr
caption	Corporate Design of Technische Universität Dresden
author	Hanisch, Falk
copyright	Falk Hanisch (2012-2022)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.06o (2022-08-09)
last changes	2022-08-09
year	2022

description	(no language specified) The TUD-Script bundle provides both classes and packages in order to create LaTeX documents in the corporate design of the Technische Universität Dresden. It bases on the KOMA-Script bundle, which must necessarily be present. For questions, problems and comments, please refer to either the LaTeX forum of the Dresden University of Technology or the GitHub "tudscr" repository. The bundle offers: • the three document classes <code>tudscrartcl</code>, <code>tudscrreprt</code>, and <code>tudscrbook</code> which serve as wrapper classes for <code>scrartcl</code>, <code>scrreprt</code>, and <code>scrbook</code>, • the class <code>tudscrposter</code> for creating posters, • the package <code>tudscrsupervisor</code> providing environments and macros to create tasks, evaluations and notices for scientific theses, • the package <code>tudscrfonts</code>, which makes the corporate design fonts of the Technische Universität Dresden available for LaTeX standard classes and KOMA-Script classes, • the package <code>fix-tudscrfonts</code>, which provides the same fonts to additional corporate design classes not related to TUD-Script, • the package <code>tudscrcomp</code>, which simplifies the switch to TUD-Script from external corporate design classes, • the package <code>mathswap</code> for swapping math delimiters within numbers (similar to <code>ionumbers</code>), • the package <code>twocolfix</code> for fixing the positioning bug of headings in twocolumn layout, and • a comprehensive user documentation as well as several tutorials.

6352 tuple – Expandable operations for tuples of numbersWeb page on CTAN <https://ctan.org/pkg/tuple>

name	tuple
caption	Expandable operations for tuples of numbers
author	Tellechea, Christian
copyright	Christian Tellechea (2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.2 (2024-12-20)
last changes	2024-12-20
year	2024
description	(no language specified) This package provides <i>expandable</i> operations for tuples of numbers: • len, sum, min, max, mean, med, quantile, standard deviation, get item, position of item • sort, add or set(*) items, filter, operations, composition(*), split(*), formatting and display

All with a concise syntax that is easy and intuitive to use :

`object.method1.method2...`

(*): unexpandable method

Cette extension met à disposition des opérations *développables* pour les tuples de nombres :

- len, sum, min, max, mean, med, quantile, écart type, get item, position d'un élément
- tri, ajout ou modification(*) d'éléments, filtre, opérations, composition(*), coupure(*), formattage et affichage

Le tout avec une syntaxe concise et d'un usage facile et intuitif :

`object.methode1.methode2...`

(*) : méthode non développable

6361 *tuzuk* – Turkish bylaws and regulations document class

Web page on CTAN <https://ctan.org/pkg/tuzuk>

name	<code>tuzuk</code>
caption	Turkish bylaws and regulations document class
author	Oğuz, Özcan
copyright	Özcan Oğuz (2021-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0.0 (2024-03-13)
last changes	2024-03-13
year	2024
description	(no language specified) The <code>tuzuk</code> class provides a standardized format for writing bylaws and regulations in Turkish-governmental style. It includes features for creating numbered articles, subsections, and signature areas commonly found in legal documents.

Features:

- Easy creation of numbered articles with the `\madde` command,
- Section titles with `\bolumadi`,
- Automatic lettered lists with the `fikra` environment,
- Built-in signature area formatting with `\imzalar`,

- Full Turkish language support.

Built originally for creating the regulation for Özgür Yazılım Derneği (The Free Software Association in Turkey), <https://oyd.org.tr/>.

Explanation of the package name: "tüzük" in Turkish means "regulations", as a document. For example, GDPR, which stands for "General Data Protection Regulation", translates as "Genel Veri Koruma Tüzüğü". In Turkish law, the non-profit associations have a "tüzük" as their constitution-like governing document.

6374 txfonts – Times-like fonts in support of mathematics

Web page on CTAN <https://ctan.org/pkg/txfonts>

name	txfonts
caption	Times-like fonts in support of mathematics
author	Ryu, Young
license	gpl = GNU General Public License (free)
version	(2009-01-14)
last changes	2009-01-14
year	2009
description	(no language specified) Txfonts supplies virtual text roman fonts using Adobe Times (or URW NimbusRomNo9L) with some modified and additional text symbols in the OT1, T1, and TS1 encodings; maths alphabets using Times/URW Nimbus; maths fonts providing all the symbols of the Computer Modern and AMS fonts, including all the Greek capital letters from CMR; and additional maths fonts of various other symbols. The set is complemented by a sans-serif set of text fonts, based on Helvetica/NimbusSanL, and a monospace set. All the fonts are in Type 1 format (AFM and PFB files), and are supported by TeX metrics (VF and TFM files) and macros for use with LaTeX.

6376 txgreeks – Shape selection for TX fonts Greek letters

Web page on CTAN	https://ctan.org/pkg/txgreek
name	<code>txgreek</code> s
caption	Shape selection for TX fonts Greek letters
author	Burnol, Jean-François
copyright	Jean-François Burnol (2011)
license	l _{pl} 1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0
description	(no language specified) The package allows LaTeX users who use the TX fonts to select the shapes (italic or upright) for the Greek lowercase and uppercase letters. Once the shapes for lowercase and uppercase have been selected via a package option, the <code>\other</code> prefix (e.g., <code>\otheralpha</code>) allows using the alternate glyph (as in the <code>fourier</code> package). The <code>txgreek</code> s package does not constrain the text font that may be used in the document.

6378 `txt` – Output documents via terminals, line printers, etcWeb page on CTAN <https://ctan.org/pkg/txt>

name	<code>txt</code>
caption	Output documents via terminals, line printers, etc
author	Droms, Ralph
license	noinfo = noinfo
version	(1992-09-30)
last changes	1992-09-30
year	1992
description	(no language specified) The package provides the means to prepare a DVI file for approximately laid-out monospace font text output. This output could then be converted to text using (for example) <code>dvi2tty</code> and then submitted to a line printer. The package is incomplete (it relies on a font ‘doc’ which it refers to as a ‘pseudo-font’ but nowhere explains where it comes from). Furthermore, it was written for obsolete LaTeX 2.09 (though it runs, modulo the absence of the font) under current LaTeX.
documentation	(no language specified) <i>Readme</i>: https://ctan.org/tex-archive/support/txt/README
on CTAN	https://ctan.org/tex-archive/support/txt
keyword	<code>dvi-text</code> (DVI output to plain text)
language(s)	no language specified

6382 type1cm – Arbitrary size font selection in LaTeX

Web page on CTAN <https://ctan.org/pkg/type1cm>

name	type1cm
caption	Arbitrary size font selection in LaTeX
author	Carlisle, David
license	lppl = The LaTeX Project Public License (free)
description	(no language specified) LaTeX, by default, restricts the sizes at which you can use its default computer modern fonts, to a fixed set of discrete sizes (effectively, a set specified by Knuth). The type1cm package removes this restriction; this is particularly useful when using scalable versions of the cm fonts (Bakoma, or the versions from BSR/Y&Y, or True Type versions from Kinch, PCTeX, etc.). In fact, since modern distributions will automatically generate any bitmap font you might need, type1cm has wider application than just those using scaleable versions of the fonts. Note that the LaTeX distribution now contains a package fix-cm, which performs the task of type1cm, as well as doing the same job for T1- and TS1-encoded ec fonts.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/type1cm/type1cm-doc.pdf
– local file	<code>./4892635328-type1cm-doc.pdf</code>

6384 typearea – Set page margins

Web page on CTAN <https://ctan.org/pkg/typearea>

name	typearea
caption	Set page margins
author	Neukam, Frank
author	Kohm, Markus
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)

version	3.43 (2024-10-24)
last changes	2024-10-24
year	2024
description	(no language specified) Typearea is a part of the koma-script bundle, and is well integrated with the requirements of classes in the bundle, but it is also convenient for use as a package in its own right.

6385 typed-checklist – Typesetting tasks, goals, milestones, artifacts, and more in LaTeX

Web page on CTAN <https://ctan.org/pkg/typed-checklist>

name	typed-checklist
caption	Typesetting tasks, goals, milestones, artifacts, and more in LaTeX
author	Grewe, Richard
copyright	Richard Grewe (2013-2022)
license	lppl1.2 = The LaTeX Project Public License 1.2 (free)
version	2.1 (2022-05-28)
last changes	2022-05-28
year	2022
description	(no language specified) The main goal of this package is to provide means for typesetting checklists in a way that stipulates users to explicitly distinguish checklists for goals, for tasks, for artifacts, and for milestones — i.e., the <i>type</i> of checklist entries. The intention behind this is that a user of the package is coerced to think about what kind of entries he/she adds to the checklist. This shall yield a clearer result and, in the long run, help with training to distinguish entries of different types.

6386 typedref – Eliminate errors by enforcing the types of labels

Web page on CTAN <https://ctan.org/pkg/typedref>

name	typedref
caption	Eliminate errors by enforcing the types of labels
author	Seidman, Gregory
author	Ashton, James
copyright	Gregory Seidman (2001-2013)
license	other-nonfree = License that prevents distribution (not free)
version	1.1
description	(no language specified) The package is provided to help users avoid cross-reference errors; it replaces <code>\ref</code> with <code>\figureref</code> , <code>\sectionref</code> , <code>\eqref</code> , etc., so that you're forced to specify the kind of label you're referencing. Each reference command also generates appropriate text automatically, so that instead of typing <code>Figure~\ref{figure:key}</code> , all you need is <code>\figureref{figure:key}</code> . The <code>\label</code> command is redefined to record the type with the label defined, so that each type of label has its own namespace.

6387 typeface – Select a balanced set of fontsWeb page on CTAN <https://ctan.org/pkg/typeface>

name	typeface
caption	Select a balanced set of fonts
author	Jones, Geoffrey
copyright	Geoffrey Jones (2012)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.1
description	(no language specified) The package provides the means of establishing a consistent set of fonts for use in a LaTeX document. It allows mixing and matching the Type 1 font sets available on the archive (and it may be extended, via its configuration file, to support other fonts). Font-set definition takes the form of a set of options that are read when the package is loaded: for each typographic category (main body font, sans-serif font, monospace font, mathematics fonts, text figures, and so on), a font or a transformation is given in those options. The approach enables the user to remember their own configurations (as a single command) and to borrow configurations that other users have developed. The present release is designated "for review".

Web page on CTAN <https://ctan.org/pkg/typicons>

name	typicons
caption	Font containing a set of web-related icons
author	Vigil, Arthur
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.0.7 (2015-05-20)
last changes	2015-05-20
year	2015
description	(no language specified) This package grants access to 336 web-related icons provided by the included “Typicons” free font, designed by Stephen Hutchings and released under the SIL Open Font License . See http://www.typicons.com for more details about the font itself. This package requires the fontspec package and either the Xe(La)TeX or Lua(La)TeX engine to load the included ttf font. Once the package is loaded, icons can be accessed through the general <code>\ticon</code> command, which takes as argument the name of the desired icon, or through direct commands specific to each icon. The full list of icon designs, names and direct commands is showcased in the manual.

6393 *typoaid* – Macros for font diagnostics

Web page on CTAN <https://ctan.org/pkg/typoaid>

name	<code>typoaid</code>
caption	Macros for font diagnostics
author	Ratti, Daniele
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.4.7 (2017-05-07)
last changes	2017-05-07
year	2017
description	(no language specified) This package provides macros for measuring alphabet lengths (i.e. the length occupied by the characters "abcd...xyz"), em-widths and ex-heights, which may help in making typesetting decisions. The package is compatible with pdfLaTeX, LuaLaTeX, and XeLaTeX, and will accept font family switches defined via the fontspec package. The plan is that future versions shall be able to provide even more diagnostic tools, and some LuaTeX-specific special commands, too. The package relies on the following other LaTeX packages: expl3 , array , booktabs , and siunitx .

6394 *typog* – Typographic fine-tuning and micro-typographic enhancements

Web page on CTAN <https://ctan.org/pkg/typog>

name	typog
caption	Typographic fine-tuning and micro-typographic enhancements
author	Spiel, Chris
copyright	Ch. L. Spiel (2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.5 (2025-10-27)
last changes	2025-10-27
year	2025
description	(no language specified) This package provides macros for micro-typographic enhancements. It covers a variety of topics: • Precise hyphenation control • Disable/break ligatures • Manual italic correction • Extra kerning for slash and hyphen • Raising selected characters (e.g. hyphen, en-dash, and em-dash) • Aligning of the last line of a paragraph • Filling of the last line of a paragraph • Word spacing control • Microtype front-end • Slightly sloppy paragraphs • Vertically partially-tied paragraphs • Breakable displayed equations • Setspace front-end

- Smooth ragged-right paragraphs

Moreover, typog provides an environment to flag interesting parts of the information deluge typically accumulating in a LaTeX log-file and an associated tool, `typog-grep`, that selectively retrieves these parts.

year	2026
description	(no language specified) These class files implement the house style of the University of Antwerp. This package originated from the Faculty of Applied Engineering. Using these class files will make it easy for you to make and keep your documents compliant to this version and future versions of the house style of the University of Antwerp. This includes classes for course texts, master theses, phd theses, exams, reports and a beamer theme for slides.

6405 *ucalgmthesis* – LaTeX thesis class for University of Calgary Faculty of Graduate Studies

Web page on CTAN <https://ctan.org/pkg/ucalgmthesis>

name	ucalgmthesis
caption	LaTeX thesis class for University of Calgary Faculty of Graduate Studies
author	Zach, Richard
copyright	Richard Zach (2019)
license	mit = MIT License (free)
version	(2023-03-18)
last changes	2023-03-18
year	2023
description	(no language specified) <code>ucalgmthesis.cls</code> is a LaTeX class file that produces documents according to the thesis guidelines of the University of Calgary Faculty of Graduate Studies . It uses the memoir class, which provides very powerful and flexible mechanisms for book design and layout. All <code>memoir</code> commands for changing chapter and section headings, page layout, fancy foot- and endnotes, typesetting poems, etc., can be used. (Memoir is meant as a replacement for the standard LaTeX classes, so all standard LaTeX commands such as <code>\chapter</code> , <code>\section</code> , etc., still work.) Likewise, any of <code>memoir</code> ’s class options can be

	passed as options to <code>ucalgmthesis</code> , in particular <code>12pt</code> to select 12 point type (11 point is the default).

6411 `ucs` – Extended UTF-8 input encoding support for LaTeX

Web page on CTAN <https://ctan.org/pkg/ucs>

name	<code>ucs</code>
caption	Extended UTF-8 input encoding support for LaTeX
author	Jeltsch, Wolfgang
author	Carlisle, David
author	Unruh, Dominique
copyright	Dominique Unruh (2000-2001)
copyright	Wolfgang Jeltsch (2011-2013)
copyright	David Carlisle (2022)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.4 (2023-11-09)
last changes	2023-11-09
year	2023

description	(no language specified) The bundle provides the <code>ucs</code> package, and <code>utf8x.def</code>, together with a large number of support files. The <code>utf8x.def</code> definition file for use with inputenc covers a wider range of Unicode characters than does <code>utf8.def</code> in the LaTeX distribution. The package provides facilities for efficient use of its large sets of Unicode characters. Glyph production may be controlled by various options, which permits use of non-ASCII characters when coding mathematical formulae. Note that the bundle previously had an alias ”<code>unicode</code>”; that alias has now been withdrawn, and no package of that name now exists.

6419 uebungsblatt – A LaTeX class for writing exercise sheets

Web page on CTAN <https://ctan.org/pkg/uebungsblatt>

name	uebungsblatt
caption	A LaTeX class for writing exercise sheets
author	Akkerman, Igor
copyright	Igor Akkerman (2004-2006)
license	lppl = The LaTeX Project Public License (free)
version	1.5.0
description	(no language specified) This package implements a LaTeX class for writing exercise sheets for a lecture. Features: – quick typesetting of exercise sheets or their revisions, – simple user friendly commands, – elegant page formatting, – automatic numbering of exercises and sub-exercises, – the number of the exercise sheet is extracted automatically from the file name,

	– static information about the lectures and the authors needs to be provided at one point only.

6434 *uktex* – The UK TeX digest

Web page on CTAN <https://ctan.org/pkg/uktex>

name	UK-TeX
caption	The UK TeX digest
license	pd = Public Domain Software (free)
description	(no language specified) The UK TeX digest started (at a time when TeXhax was also available), at least partly justified by the oddities of internet access in the UK. The organisation of the digest was odd: a team of enthusiasts tried to provide answers to questions before the digest was published, so that readers would encounter a problem closely followed by a solution in the same issue. Eventually, the UK TeX digest was merged with the TeXhax digest, and the merged list was run in the UK for a time, but without the distinctive experts group. The archives are arranged by year, and run from 1987 to 1994.

6461 *underscore* – Control the behaviour of “_” in text

Web page on CTAN <https://ctan.org/pkg/underscore>

name *underscore*
 caption Control the behaviour of “_” in text
 author Arseneau, Donald
 copyright Donald Arseneau (1998, 2001, 2005, 2006)
 license lpl = The LaTeX Project Public License (free)
 version (2006-09-13)
 last changes 2006-09-13
 year 2006
 description (no language specified) With the package, `\_` in text mode (i.e., `\textunderscore`) prints an underscore so that hyphenation of words either side of it is not affected; a package option controls whether an actual hyphenation point appears after the underscore, or merely a break point.
 The package also arranges that, while in text, ‘_’ itself behaves as `\textunderscore` (the behaviour of `_` in maths mode is not affected).
 documentation (no language specified) *Package documentation:*
<https://ctan.org/tex-archive/macros/latex/contrib/underscore/underscore.pdf>

 on MikTeX *underscore*
 on T_EXLive *underscore*
 keyword typesetting (support for variations of typographic style)
 language(s) no language specified
 last access 2025-02-07

6462 *undertilde* – Typeset a tilde under one (or many) maths symbols

Web page on CTAN <https://ctan.org/pkg/undertilde>

name	undertilde
caption	Typeset a tilde under one (or many) maths symbols
author	Bayart, Benjamin
license	noinfo = noinfo
version	1.0
description	(no language specified) The implementation is probably less than totally robust, though undoubtedly better than that in the generic undertilde macros also available on CTAN.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/undertilde/undertilde.pdf
– local file	./8610826565-undertilde.pdf
on CTAN	https://ctan.org/tex-archive/macros/latex/contrib/undertilde
on MikTeX	undertilde
keyword	maths (support for typesetting mathematics)
see also	see section 30 on page 29: (accents – Multiple mathematical accents)
language(s)	no language specified
year	without year
last access	2025-02-07

6463 *undertilde-gen* – A simple macro for placing a tilde under a character

Web page on CTAN <https://ctan.org/pkg/undertilde-gen>

name	undertilde-gen
caption	A simple macro for placing a tilde under a character
license	noinfo = noinfo
version	(1993-02-15)
last changes	1993-02-15
year	1993

description	(no language specified) The code creates a <code>\mathord</code> at standard size (no attempt to adjust for different contexts in a mathematical expression). Benjamin Bayart’s undertilde (for all its faults) does the job better—the general user could easily remove the LaTeX mechanisms from the file.
on CTAN	https://ctan.org/tex-archive/macros/generic/misc/undertilde.tex
on MikTeX	genmisc
keyword	maths (support for typesetting mathematics)
language(s)	no language specified

installation	https://ctan.org/tex-archive/install/macros/latex/contrib/undolabl.tds.zip
on MikTeX	undolabl
on T _E XLive	undolabl
keyword	label-ref (label and reference systems)
language(s)	no language specified
last access	2025-02-07

6465 undump – Make a new executable with format loaded

Web page on CTAN <https://ctan.org/pkg/undump>

name	undump
caption	Make a new executable with format loaded
author	Thomas, Spencer W.
license	noinfo = noinfo
version	(1980-07-02)
last changes	1980-07-02
year	1980
description	(no language specified) Undump implements the pre-web2c mechanism for generating a new executable from an existing executable and a core dump. The output executable contains all the memory allocated by the run of the executable (up to its crash), and starts at main(). Different Unix styles (of the time) each had their own undump routine.
on CTAN	https://ctan.org/tex-archive/obsolete/support/undump
keyword	obsolete (package declared obsolete)
keyword	engine (TeX (or TeX-alike) typesetting engine)
language(s)	no language specified
last access	2025-02-07

6466 unfinished – Mark unfinished parts of a documentWeb page on CTAN <https://ctan.org/pkg/unfinished>

name	unfinished
caption	Mark unfinished parts of a document
license	noinfo = noinfo
version	(1991-08-09)
last changes	1991-08-09
year	1991
description	(no language specified) The package provides an <code>unfinished</code> environment convenient for marking unfinished sections of a document. The environment complains if it thinks the document is not marked as a draft (in the sense of having <code>\overfullrule</code> non-zero).

6469 `uni-titlepage` – Universal titlepages with configuration options and predefined styles

Web page on CTAN <https://ctan.org/pkg/uni-titlepage>

name	uni-titlepage
caption	Universal titlepages with configuration options and predefined styles
author	Kohm, Markus
copyright	Markus Kohm (2009-2022)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.2 (2023-11-20)
last changes	2023-11-20
year	2023

description	(no language specified) Creation of title pages is something most authors should not have to do. But reality is not perfect, so a lot of authors have to do it. This package not only provides several pages for the title instead of only one — at least five are typical for a thesis! —, it also provides a bunch of predefined titlepage styles with several standard elements, and optionally additional elements.

Web page on CTAN <https://ctan.org/pkg/unicode-alphabets>

name	<code>unicode-alphabets</code>
caption	Macros for using characters from Unicode’s Private Use Area
author	Eriksen, Mikkel Eide
license	cc-by-sa-4 = CC BY-SA 4.0 (free)
version	(2023-02-27)
last changes	2023-02-27
year	2023

description	(no language specified) While Unicode supports the vast majority of use cases, there are certain specialized niches which require characters and glyphs not (yet) represented in the standard. Thus the Private Use Area (PUA) at code points E000–F8FF, which enables third parties to define arbitrary character sets. This package allows configuring a number of macros for using various PUA character sets in LaTeX (AGL, CYFI, MUFI, SIL, TITUS, UCSUR, UNZ), to enable transcription and display of medieval and other documents.

last changes	2025-01-07
year	2025

description	(no language specified) This bundle provides generic access to Unicode Consortium data for TeX use. It contains a set of text files provided by the Unicode Consortium which are currently all from Unicode 8.0.0, with the exception of <code>MathClass.txt</code> which is not currently part of the Unicode Character Database. Accompanying these source data are generic TeX loader files allowing this data to be used as part of TeX runs, in particular in building format files. Currently there are two loader files: one for general character set up and one for initialising XeTeX character classes as has been carried out to date by <code>unicode-letters.tex</code>. The source data are distributed in accordance with the license stipulated by the Unicode Consortium. The bundle as a whole is co-ordinated by the LaTeX3 Project as a general resource for TeX users.

author	Robertson, Will
author	Hosny, Khaled
copyright	Khaled Hosny (2012-2015)
copyright	Philipp Stephani (2010-2017)
copyright	Will Robertson (2006-2019)

copyright	Joseph Wright (2011-2017)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.8r (2023-08-13)
last changes	2023-08-13
year	2023
description	(no language specified) This package provides a comprehensive implementation of unicode maths for XeLaTeX and LuaLaTeX. Unicode maths requires an OpenType mathematics font, of which there are now a number available via CTAN. While backwards compatibility is strived for, there are some differences between the legacy mathematical definitions in LaTeX and <code>amsmath</code>, and the Unicode mathematics definitions. Care should be taken when transitioning from a legacy workflow to a Unicode-based one.

6479 `unicodfonttable` – A Unicode font table generator

Web page on CTAN <https://ctan.org/pkg/unicodfonttable>

name	<code>unicodfonttable</code>
caption	A Unicode font table generator
author	Mittelbach, Frank
copyright	Frank Mittelbach (2019-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0k (2025-07-11)
last changes	2025-07-11
year	2025
description	(no language specified) This package produces font tables for unicode fonts as well as for 8bit fonts. The table layout can be adjusted in various ways including restricting the range of output to show only a portion of a specific font. To quickly produce a one-off table there is a stand-alone version <code>unicodfont.tex</code> that asks you a few questions and then generates the table — somewhat similar to <code>nfssfont.tex</code> for 8-bit fonts.

6481 *unifront* – Give notes a unique front page for every chapter and section

Web page on CTAN <https://ctan.org/pkg/unifront>

name	unifront
caption	Give notes a unique front page for every chapter and section
author	Wei, Weifan
copyright	Weifan Wei (2023)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0 (2023-05-07)
last changes	2023-05-07
year	2023
description	(no language specified) This package can help you format your notes easily and give them a unique front page for every chapter and section. It calculates your progress and then displays the progress bar under the title. It also displays a partial table of contents under every progress bar and only shows the subdirectories of the current part. To generate this, you can simply enter your current completed titles with a command that accepts Variable Arguments. Still, that also helps you review your notes. You can also customise the colour of the bar.

6486 unisc – Unicode small caps with Lua/XeLaTeX

Web page on CTAN	https://ctan.org/pkg/unisc
name	unisc
caption	Unicode small caps with Lua/XeLaTeX
author	निरंजन
copyright	निरंजन (2022)
license	fdl = Free Documentation License (free)
license	gpl3+ = GNU General Public License, version 3 or newer (free)
version	0.2 (2022-04-29)
last changes	2022-04-29
year	2022
description	(no language specified) LaTeX produces small caps with <code>\textsc{text}</code> or <code>\scshape text</code> . Neither of these commands produce small caps in Unicode. If the output text is copied and pasted somewhere it shows the same characters as used in the input. This package aims to internally convert all the characters provided to the commands mentioned above. It assumes that the file using this package is compiled with Lua/XeLaTeX and a good Unicode font which has the small caps characters, e.g., Charis SIL .

license lpl1.3 = The LaTeX Project Public License 1.3 (free)

version 2.9 (2024-09-28)

last changes 2024-09-28

year 2024

description (no language specified) This bundle provides LaTeX2e classes, BibLaTeX files, and templates suitable for student papers, PhD research proposals (Exposés), and theses in (Applied) Linguistics at the University of Vienna.

The classes implement some standards for these types of text, such as suitable title pages. They are particularly suited for the field of (Applied) Linguistics and pre-load some packages that are considered useful in this context.

The classes can also be used for General and Historical Linguistics as well as for other fields of study at Vienna University. In this case, however, some settings may have to be adjusted.

6497 *unizgklasa* – A LaTeX class for theses at the Faculty Of Graphic Arts in Zagreb

Web page on CTAN <https://ctan.org/pkg/unizgklasa>

name	<i>unizgklasa</i>
caption	A LaTeX class for theses at the Faculty Of Graphic Arts in Zagreb
author	Milin, Matea
copyright	Matea Milin (2019)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0 (2019-04-03)
last changes	2019-04-03
year	2019
description	(no language specified) This class is intended for generating graduate and final theses according to the instructions of the Faculty of Graphic Arts, University of Zagreb. It does not necessarily correspond to the requirements of each component of the University, but is designed as an idea for linking and uniformizing the look of all graduate papers. Anyone who likes it is welcome to use it.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/unizgklasa/README.md
documentation	<i>Example of use (Croatian and English)</i> : https://ctan.org/tex-archive/macros/latex/contrib/unizgklasa/example.pdf

6499 unpacked – Unpacked copy of the LaTeX sourcesWeb page on CTAN <https://ctan.org/pkg/unpacked>

name	unpacked
caption	Unpacked copy of the LaTeX sources
author	Mittelbach, Frank
author	The LaTeX Project Team
author	Lamport, Leslie
copyright	The LaTeX3 Project (1993-2014)
license	lppl = The LaTeX Project Public License (free)
version	(2014-10-12)
last changes	2014-10-12
year	2014
description	(no language specified) This package used to provide the source of LaTeX in its form immediately prior to compilation into a format. When LaTeX2e first appeared, this was a significant support to users (since unpacking used on some machines to take a very long time). However, the world has moved on since then, most users obtain their LaTeX sources and formats via the distributions, and whoever is still interested in these files can easily obtain them by unpacking latex-base.tds.zip .

name	upquote
caption	Show “realistic” quotes in verbatim
author	Covington, Michael
author	Mittelbach, Frank
author	Kuhn, Markus
copyright	Michael A. Covington, Frank Mittelbach (2003)
license	lpl1.2 = The LaTeX Project Public License 1.2 (free)
version	1.3
description	(no language specified) Typewriter-style fonts are best for program listings, but Computer Modern Typewriter prints ‘ and ’ as bent opening and closing single quotes. Other fonts, and most programming languages, print ‘ as a grave accent and ’ upright; ’ is used both to open and to close quoted strings. The package switches the typewriter font to Computer Modern Typewriter in OT1 encoding, and modifies the behaviour of <code>verbatim</code>, <code>verbatim*</code>, <code>\verb</code>, and <code>\verb*</code> to print in the “ ’ and ’ way”. It does this regardless of other fonts or encodings in use, so long as the package is loaded after the other fonts were. The package does not affect <code>\tt</code>, <code>\texttt</code>, etc.

6517 *uptex* – Unicode version of pTeX

Web page on CTAN <https://ctan.org/pkg/uptex>

Alias	euptex
name	uptex
caption	Unicode version of pTeX
author	Tanaka, Takuji
license	other-free = Free license not otherwise listed (free)
description	(no language specified) upTeX is an extension of pTeX, using UTF-8 input and producing UTF-8 output. It was originally designed to improve support for Japanese, but is also useful for documents in Chinese and Korean. It can process Chinese simplified, Chinese traditional, Japanese, and Korean simultaneously, and can also process original LaTeX with <code>\inputenc{utf8}</code> and Babel (Latin/Cyrillic/Greek etc.) by switching its <code>\kcatcode</code> tables.

6523 `url` – Verbatim with URL-sensitive line breaks

Web page on CTAN <https://ctan.org/pkg/url>

name	<code>url</code>
caption	Verbatim with URL-sensitive line breaks
author	Arseneau, Donald
license	lppl = The LaTeX Project Public License (free)
version	3.4 (2013-09-16)
last changes	2013-09-16
year	2013
description	(no language specified) The command <code>\url</code> is a form of verbatim command that allows linebreaks at certain characters or combinations of characters, accepts reconfiguration, and can usually be used in the argument to another command. (The <code>\urldef</code> command provides robust commands that serve in cases when <code>\url</code> doesn't work in an argument.) The command is intended for email addresses, hypertext links, directories/paths, etc., which normally have no spaces, so by default the package ignores spaces in its argument. However, a package option "allows spaces", which is useful for operating systems where spaces are a common part of file names.

name	<code>useclass</code>
caption	Load classes as packages
author	HUANG, Yuxi
copyright	HUANG Yuxi (2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1 (2024-10-03)
last changes	2024-10-03
year	2024

description	(no language specified) This package enables the usage of classes as packages. It was originally designed for the <code>l3doc</code> class, which is employed for documenting LaTeX code with numerous useful features. However, employing the <code>l3doc</code> class as a package is not convenient when using the developing class as the style for the document. Therefore, this package provides a simple interface for utilizing classes as packages.

6537 *user-persona* – Typesetting User Persona sheets for UX and HCI (Human-Computer Interaction)

Web page on CTAN <https://ctan.org/pkg/user-persona>

name	<i>user-persona</i>
caption	Typesetting User Persona sheets for UX and HCI (Human-Computer Interaction)
author	Tam, Claire
copyright	fractuscontext (2026)
copyright	Claire Tam (2026)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0.0
description	(no language specified) This package provides a structured environment and command set for typesetting professional user persona sheets in LaTeX. A user persona is a research-grounded representation of a target user group, synthesizing observed behaviours, goals, and frustrations into a humanized archetype (Cooper, 1999). The package is intended for User Experience (UX) researchers, Human-Computer Interaction (HCI) practitioners, and product designers who maintain documentation within a LaTeX workflow. The central <code>persona</code> environment produces a two-column layout comprising a portrait image, an identity table, a pull-quote, and a set of colour-coded content cards. Cards may be placed in the left column, right column, or as a full-width span below both columns. Predefined semantic colours are supplied for common persona sections (Goals, Behaviours, Pain Points, Context). Inline pill labels and icon badges are supported via <code>\personapill</code> and <code>\personabrand</code> (using <code>fontawesome5</code>).

6545 *utbmciad-report* – A class and configuration file for writing high quality scientific or technical reports

Web page on CTAN <https://ctan.org/pkg/utbmciad-report>

name	utbmciad-report
caption	A class and configuration file for writing high quality scientific or technical reports
author	Galland, Stéphane
copyright	Stéphane Galland (2013-2026)
license	other-nonfree = License that prevents distribution (not free)
license	lgpl3 = GNU Lesser General Public License 3 (free)
version	20260420
description	(no language specified) LaTeX class and configuration file for typesetting a scientific or technical report following the template and guidelines from the "Connaissance et Intelligence Artificielle Distribuées" (CIAD UR 7533) research laboratory of the Université de Technologie Belfort Montbéliard in France. Built on top of the powerful UPmethodology suite, it provides a professional, ready-to-use structure with advanced formatting macros. This class and configuration file could be easily extended and adapted to the style of your own institution. utbmciad-report is part of the larger project TeX-templates .

Note on Licensing

The package contains two distinct types of material:

1. LaTeX source code (all files that are under the `src/` directory and any documentation source files).

2. University and institutions logo images (all files under the `logos/` directory).

The LaTeX source code is free software: you can redistribute it and/or modify it under the terms of the GNU Lesser General Public License as published by the Free Software Foundation, either version 3 of the License, or (at your option) any later version. A copy of the GNU Lesser General Public License (LGPLv3) is provided in the file 'LICENSE.LGPLv3'.

The logo files are not licensed under the LGPLv3. They are the property of their respective university or institution and are included with permission for redistribution only as part of this complete package. They may NOT be modified, altered, or extracted and used separately without explicit written permission from the owning university or institution. The exact terms governing the logos are set forth in the file `logos/LICENSE.logos`. By redistributing this package, you agree to abide by those terms.

description	(no language specified) This package provides syntax highlighting for the Universal Variability Language (UVL) in LaTeX. It is based on the listings package and supports all UVL keywords. The package includes multiple visual themes (default, Flamapy, UVLS dark mode, and black & white) and provides inline commands for semantic highlighting. It also supports user-defined features' attributes and the inclusion of external <code>.uvl</code> files.

name	uwmslide
caption	Slides with a simple Power Point like appearance
author	Benedict, Eric
copyright	Eric Benedict (2000, 2002)
license	artistic = Perl Artistic License (not free)
version	(2000-09-26)
last changes	2000-09-26
year	2000
description	(no language specified) A slide format which produces slides with a simple Power Point like appearance. Several useful features include: use of standard titlepage to produce title slide; several slide environments including plain (page with a title), double slide (two column page with slide title), item slide (item list with title), left item slide, and right item slide. Logos are placed in the upper left corner of each slide if the logo file logo.eps is present. Preconfigured in landscape mode by default and uses Times Roman by default (originally, it was claimed, for simple conversion to PDF format).

6565 vak – BibTeX style for Russian Theses, books, etcWeb page on CTAN <https://ctan.org/pkg/vak>

name	vak
caption	BibTeX style for Russian Theses, books, etc
author	Melnikov, Vitaly G.
license	lppl = The LaTeX Project Public License (free)
version	(2011-07-04)
last changes	2011-07-04
year	2011
description	(no language specified) The file can be used to format the bibliographies of PhD theses, books etc., according to the latest Russian standards: GOST 7.82 – 2001 and GOST 7.1 – 2003. It introduces the minimum number of new entries and styles to cover all frequently used situations. The style file provides an easy way to perform a semiautomatic, or a completely manual sort of the list of the references. Processing bibliographies produced by the style requires a 8-bit BibTeX system .

6571 varioref – Intelligent page references

Web page on CTAN <https://ctan.org/pkg/varioref>

name	varioref
caption	Intelligent page references
author	Mittelbach, Frank
copyright	Frank Mittelbach (1992-2020)
copyright	The LaTeX3 Project et al. (1993-2023)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.6g (2025-01-14)
last changes	2025-01-14
year	2025
description	(no language specified) The package introduces commands <code>\vref</code> and <code>\vpageref</code>. The <code>\vref</code> command refers to labels in the same way as does <code>\ref</code>, but if the thing referred to is on a different page, the result will be decorated with "on the facing page" or "on page &lt;n&gt;", and so on, as appropriate. The <code>\vpageref</code> command similarly decorates a page number; there are also commands <code>\vrefrange</code> and <code>\vpagerefrange</code> for ranges of labels. The package is language-sensitive, and has definitions for its 'decorative' words in several languages. The package is part of the latex-tools bundle in the LaTeX required distribution.

6577 `vc` – The vc (version control) bundle

Web page on CTAN <https://ctan.org/pkg/vc>

name `vc`
 caption The vc (version control) bundle
 author Hennig, Stephan
 author Hieber, Roland
 license pd = Public Domain Software (free)
 version 0.6
 description (no language specified) This is a script based approach to version control for TeX documents. It works more reliably than do keyword-substitution-based approaches, since it tracks more than just .tex files; it can work on *all* files in a working copy.
 The vc bundle macros work with LaTeX and plain TeX. Currently, Bazaar-, Git- and Subversion-based repositories are supported; scripts are provided for use with both Unix and Windows.

6578 vcell – Vertical alignment of content inside table cellsWeb page on CTAN <https://ctan.org/pkg/vcell>

name	vcell
caption	Vertical alignment of content inside table cells
author	Dionne, Xavier
copyright	Xavier Dionne (2020-2021)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0.2
description	(no language specified) This package offers low-level macros to build rows with vertically-aligned cells (top, middle or bottom) and calculate the height of a row. These cells can have variable or fixed height and can be paragraph-cells or inline-cells. Different vertical alignments can be used in the same row.

6591 verbatimbox – Deposit verbatim text in a box

Web page on CTAN <https://ctan.org/pkg/verbatimbox>

name	verbatimbox
caption	Deposit verbatim text in a box
author	Segletes, Steven B.
license	lppl = The LaTeX Project Public License (free)
version	3.2 (2023-08-08)
last changes	2023-08-08
year	2023

description	(no language specified) The package provides a <code>verbbox</code> environment (which uses techniques similar to those of the <code>boxedverbatim</code> environment of the <code>moreverb</code> package) to place its contents into a globally available box, or into a box specified by the user. The global box may then be used in a variety of situations (for example, providing a replica of the <code>boxedverbatim</code> environment itself). A valuable use is in places where the standard <code>verbatim</code> environment (which is based on <code>atrivlist</code>) may not appear. The package makes use of the <code>verbatim</code> package (which is a required part of any LaTeX distribution).
documentation	(no language specified) <i>package documentation</i>: https://ctan.org/tex-archive/macros/latex/contrib/verbatimbox/verbatimbox.pdf

last access	2025-02-07

6593 *verbdef* – Define commands which expand to verbatim text

Web page on CTAN <https://ctan.org/pkg/verbdef>

name	<code>verbdef</code>
caption	Define commands which expand to verbatim text
author	Carlisle, David
author	Fairbairns, Robin
license	lppl = The LaTeX Project Public License (free)
version	0.2
description	(no language specified) The package defines a single command <code>\verbdef</code> (which has a *-form, like <code>\verb</code>). <code>\verbdef</code> will define a robust command whose body expands to verbatim text. By using commands defined by <code>\verbdef</code> , one can put verbatim text into the arguments of commands; since the defined command is robust, it doesn't matter if the argument is moving. (Full details of syntax and caveats about use are in comments in the file itself.)

documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/verbdef/verbdef.pdf

version	1.11 (2025-03-07)
last changes	2025-03-07
year	2025

description	(no language specified) This package is intended for package authors who patch code from other packages. To improve reliability, the <code>verifycommand</code> package provides a way to verify that macros or environments have not changed. This allows a package author to check before patching a definition. If a definition is not as expected, a warning is issued. At the end of the compile, a list of all changed definitions is displayed.

The **Visual LaTeX FAQ** is an innovative new search interface on LaTeX Frequently Asked Questions. This version is a French translation, offering links to the **French-speaking LaTeX FAQ**.

Vous avez du mal à trouver la réponse à une question sur LaTeX ou même à trouver les mots pour exprimer votre question? La FAQ LaTeX visuelle est une interface de recherche innovante qui présente plus d'une centaine d'exemples de mises en forme de documents fréquemment demandées. Il suffit de cliquer sur l'hyperlien qui correspond à ce que vous souhaitez faire – ou ne pas faire – et la FAQ LaTeX visuelle enverra votre navigateur web à la page correspondante de la **FAQ LaTeX francophone**.

6629 *vmargin* – Set various page dimensionsWeb page on CTAN <https://ctan.org/pkg/vmargin>

name	vmargin
caption	Set various page dimensions
author	Kuhlmann, Volker
copyright	Volker Kuhlmann (1993-1996, 1999, 2000, 2004)
license	lppl = The LaTeX Project Public License (free)
version	2.5
description	(no language specified) Provides a macro to set various margins as well as dimensions for header/footer and page dimensions. Most common paper sizes, paper orientation, disabling of headers and footers, and two sided printing are supported. The vmargin package does not rely on other packages and was designed with speed and size in mind. Its user interface might not be very fancy, but it's fast, small, and gets the job done. If you are looking for something more elaborate try the geometry package.

documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/vmargin/vmargin.pdf

6634 *vocaltract* – Visualise the vocal tract using LaTeX and PSTricks

Web page on CTAN <https://ctan.org/pkg/vocaltract>

name	vocaltract
caption	Visualise the vocal tract using LaTeX and PSTricks
author	Ververidis, Dimitrios
license	lppl = The LaTeX Project Public License (free)
version	1

description	(no language specified) The package enables the user to visualise the vocal tract. The vocal tract (in the package) is manipulated by a vector of articulation parameters according to the <i>S. Maeda</i> model. Animation may be achieved by providing a sequence of vectors over time (e.g., from Matlab). A sequence of vectors for certain German phonemes is embedded in the package, which allows for animation when no other vector is available. The package's graphics are produced using pstricks .
documentation	(no language specified) <i>Example model</i> : https://ctan.org/tex-archive/graphics/pstricks/contrib/vocaltract/vtLatex_FigureDemo.pdf
– local file	./2863365184-vtLatex_FigureDemo.pdf

6637 voss-mathmode – A comprehensive review of mathematics in (La)TeXWeb page on CTAN <https://ctan.org/pkg/voss-mathmode>

name `voss-mathmode`
 caption A comprehensive review of mathematics in (La)TeX
 author Voß, Herbert
 copyright Voß (2008, 2009)
 license lpl = The LaTeX Project Public License (free)
 version 2.47 (2010-12-14)
 last changes 2010-12-14
 year 2010
 description (no language specified) The review includes:

- Standard LaTeX mathematics mode;
- amsmath;
- TeX and mathematics;
- Other packages;
- Tuning math typesetting;
- Mathematics fonts;
- Special symbols;
- Examples; and
- Lists, bibliography and index.

The author considers this package now as being too old and afflicted with too many typographical bugs. That's why it has been classified as "obsolete", at least for the time being.

documentation (no language specified) *The document itself:*

6640 vpe – Source specials for PDF output

Web page on CTAN <https://ctan.org/pkg/vpe>

name	vpe
caption	Source specials for PDF output
author	Oberdiek, Heiko
license	lppl = The LaTeX Project Public License (free)
version	0.2
description	(no language specified) VPE is a system to make the equivalent of "source special" marks in a PDF file. Clicking on a mark will activate an editor, pointing at the source line that produced the text that was marked. The system comprises a perl file (vpe.pl) and a LaTeX package (vpe.sty); it will work with PDF files generated via LaTeX/dvips, pdfTeX (version 0.14 or better), and LaTeX/VTeX. Using the LaTeX/dvips or pdfLaTeX routes, the (pdf)TeX processor should be run with shell escapes enabled.
documentation	(no language specified) <i>Readme</i>: https://ctan.org/tex-archive/macros/latex/contrib/vpe/README

6648 vslitex – Virtual invisible fonts for use with LaTeX Slides classWeb page on CTAN <https://ctan.org/pkg/vslitex>

name	VSLiTeX
caption	Virtual invisible fonts for use with LaTeX Slides class
author	Koellner, Armin
license	noinfo = noinfo
version	0.4
description	(no language specified) The LaTeX 2.09-based program SliTeX, and the corresponding LaTeX slides class, use invisible fonts when producing multi-coloured overlays on foils. SliTeX distributions included a set of invisible versions of the Metafont sources of the Computer Modern fonts (an odd concept, but it worked). The present bundle provides a (somewhat more intellectually satisfying) set of virtual fonts that provide the same information (i.e., effectively metrics only) without the need to compile a Metafont source to get it.

6655 w-a-schmidt – A collection of metrics for commercial fonts

Web page on CTAN <https://ctan.org/pkg/w-a-schmidt>

name w-a-schmidt
 caption A collection of metrics for commercial fonts
 author Schmidt, Walter A.
 author Harcombe, Keiran
 license lpl = The LaTeX Project Public License (free)
 description (no language specified) A set of font installation packs for commercial fonts (none of which is itself available from CTAN: the user must acquire them from the commercial supplier).
 Fonts supported are:
 Adobe Garamond, Aldus, Futura, Stempel Garamond, Frutiger, Melior, Minion, Myriad, Optima, Rotis, Sabon and Syntax;
 Berthold ConcordeBE and BaskervilleBQ;
 Bitstream Humanist 777 (Frutiger), Letter Gothic, Latin 725 (Meridien), News Gothic, Dutch 809 (Concorde), Zapf Humanist 601 (Optima), Zurich (Univers) and Venetian 301 (Centaur);
 FontFont Dingbests, InterOffice and QType Extended Book;
 Lintotype Adobe Garamond LT, Aldus LT, ITC Charter, Frutiger Next, Futura LT, Stempel Garamond LT, Meridien LT, Melior LT, Minion, Myriad, ITC Officina Sans, Optima Nova, Sabon LT, Syntax LT, ITC Zapf Chancery LT, Zapf Essentials LT and Zapfino One plus Ornaments;
 Monotype TimesNR, NR Seven, Small Text;
 Springer SMinion and SMyriad; and
 Underware Dolly.

For each font(set) there's a `.zip` file of metrics, and a `.txt` file of instructions. In some cases there's also a `-source.zip` file of **fontinst** sources for the family.

description (no language specified) This font contains all lasy characters (by L.Lamport, copyright notice in `lasychr.mf`), and a lot more symbols. Provided are the Metafont files for 5-10pt, and bold and slanted 10pt fonts, together with a `.tex` and `.pdf` documentation, and a file for using the fonts in a PLAIN-TeX document.

Type-1 fonts by Michael Sharpe and Taco Hoekwater are available as separate package [wasy-type1](#).

Support under LaTeX is provided by Axel Kielhorn's [wasysym](#) package.

6671 web2w – Converting TeX from WEB to cwebWeb page on CTAN <https://ctan.org/pkg/web2w>name *web2w*

caption Converting TeX from WEB to cweb

author Ruckert, Martin

copyright Martin Ruckert (2017)

license gpl3+ = GNU General Public License, version 3 or newer (free)

version 0.4

description (no language specified) This package contains a project to convert the TeX source code written by Donald E. Knuth as a WEB into a cweb.

A WEB is a literate program, i.e. a program which is written as a form of literature and consequently published as a book. Of course there is a way of converting such a piece of literature into an ordinary program: it contains Pascal code.

Over the years, the support for Pascal as a major programming language has decreased and Pascal was replaced by C as the system programming language of choice. Consequently, WEB was replaced by cweb, leading to the obvious question: can we convert the TeX source code to cweb. And the answer is: yes and no.

No, because TeX is rather a large program, so translating it manually is very expensive, and translating literature by means of an automatic process is not feasible either.

Yes, because the program contained in this project, a literate program itself, is specifically tailored to the TeX source code and achieves a good approximation to such a translation.

year	2023
description	(no language specified) This package identifies all widows and orphans in a document to help a user to get rid of them. The act of resolving still needs to be done manually: By rewriting text, running some paragraph long or short or explicitly breaking in some strategic place. It will also identify and warn about words broken across columns or pages and display formulas separated from their introductory paragraph.

6701 withargs – In-place argument substitution

Web page on CTAN <https://ctan.org/pkg/withargs>

name	withargs
caption	In-place argument substitution
author	Helvensteijn, Michiel
copyright	Michiel Helvensteijn (2013-2016)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.3.1 (2019-11-04)
last changes	2019-11-04
year	2019
description	(no language specified) The <code>\withargs</code> command provides a clean way to populate a template (containing #1 , #2 , etc.) using LaTeX argument substitution. It also allows you to carefully control argument expansion using a LaTeX3-style argument specification. Uses range from creating readable string templates (akin to C's <code>printf</code> function) to performing otherwise complex token-list manipulation.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/withargs/withargs.pdf
– local file	<code>./1222043518-withargs.pdf</code>

6717 *wordcount* – Estimate the number of words in a LaTeX document

Web page on CTAN <https://ctan.org/pkg/wordcount>

name	wordcount
caption	Estimate the number of words in a LaTeX document
author	Downes, Michael J.
license	lppl = The LaTeX Project Public License (free)
version	1.7 (2016-06-03)
last changes	2016-06-03
year	2016
description	(no language specified) The package provides a relatively easy way of estimating the number of words in a LaTeX document that does not require <code>dvitty</code> or other DVI converters. It does however require something like Unix <code>grep -c</code> that can search a file for a particular string and report the number of matching lines. An accompanying shell script <code>wordcount.sh</code> contains more information in its comments.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/wordcount/README
on CTAN	https://ctan.org/tex-archive/macros/latex/contrib/wordcount
on MikTeX	wordcount

6719 wordlike – Simulating word processor layoutWeb page on CTAN <https://ctan.org/pkg/wordlike>

name	wordlike
caption	Simulating word processor layout
author	Fenn, Jürgen
copyright	Jürgen Fenn (2003-2006)
license	lppl = The LaTeX Project Public License (free)
version	1.2b
description	(no language specified) The package simulates typical word processor layout: narrow page margins, Times, Helvetica and Courier fonts, <code>\LARGE</code> or <code>\Large</code> headings, and <code>\sloppy</code> typesetting. The package aims at making life easier for users who are discontent with LaTeX's standard layout settings because they need a layout that resembles the usual "wordlike" output. The design of the package draws on several discussions in the <code>de.comp.text.tex</code> and <code>comp.text.tex</code> newsgroups that are referred to in the manual.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/wordlike/wordlike.pdf

6733 *wsemclassic* – LaTeX class for Bavarian school w-seminar papers

Web page on CTAN <https://ctan.org/pkg/wsemclassic>

name *wsemclassic*

caption LaTeX class for Bavarian school w-seminar papers

author Rosenberger, Johannes

copyright Johannes Rosenberger (2013)

license bsd = BSD Style License (free)

version 1.0.1

description (no language specified) The class is designed either to conform with the recommendations of the Bavarian Kultusministerium for typesetting w-seminar papers (strict mode), or to use another style which should look better.

The class is based on the LaTeX standard report class.

6742 *xbmks* – Create a cross-document bookmark tree

Web page on CTAN <https://ctan.org/pkg/xbmks>

name	xbmks
caption	Create a cross-document bookmark tree
author	Story, Donald P.
copyright	D. P. Story (2016-2018)
license	lppl1.2 = The LaTeX Project Public License 1.2 (free)
version	(2020-01-16)
last changes	2020-01-16

year	2020
description	(no language specified) The package defines the concept of a document bundle, which is a collection of documents that are to be built separately, but have a common bookmark tree. The only options are driver options, these are dvips (Acrobat Distiller or ps2pdf these can be used as the PDF creator), pdfLaTeX (and LuaLaTeX, which is treated the same as pdfLaTeX), and XeLaTeX. The package auto-detects pdfLaTeX and XeLaTeX, and dvips is the default, so there is actually no need to pass the driver option.

6749 xcoffins – Rich boxed material for LaTeX 3

Web page on CTAN	https://ctan.org/pkg/xcoffins
name	<code>xcoffins</code>
caption	Rich boxed material for LaTeX 3
author	The LaTeX Project Team
copyright	LaTeX3 Project (2010-2024)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	(2024-03-14)
last changes	2024-03-14
year	2024

description	(no language specified) Coffins are boxes which contain typeset material. Along with the box itself, the coffin structure holds information about the size and shape of the box, and alignment information in the form of a set of "poles" (horizontal and vertical lines at particular positions defined relative to the box). The points where these poles intersect are "handles", which are the points used to define the placing of a coffin. The package provides a design-level interface to the LaTeX 3 kernel functions which provide coffins. The package is part of the l3experimental bundle.

6751 `xcolor-material` – Defines the 256 colors from Google Material Color Palette

version	3.02 (2024-09-29)
last changes	2024-09-29
year	2024
description	(no language specified) The package starts from the basic facilities of the <code>color</code> package, and provides easy driver-independent access to several kinds of color tints, shades, tones, and mixes of arbitrary colors. It allows a user to select a document-wide target color model and offers complete tools for conversion between eight color models. Additionally, there is a command for alternating row colors plus repeated non-aligned material (like horizontal lines) in tables. Colors can be mixed like <code>\color{red!30!green!40!blue}</code> .

6754 *xcookybooky* – Typeset (potentially long) recipes

description	(no language specified) The package defines an environment that <i>only</i> typesets specified environments within its scope. So, for example, if you want nothing but the <code>figure</code> and <code>table</code> environments in your document, you can enclose the whole document with an <code>xcomment</code> environment that excludes everything but. This is a lot easier than excluding the chunks of text between the environments you want, or creating an entire document containing only those environments. The package was previously part of the seminar bundle for typesetting presentations.

6756 *xdoc* – Extending the LaTeX doc system

Web page on CTAN <https://ctan.org/pkg/xdoc>

name	<code>xdoc</code>
caption	Extending the LaTeX doc system
author	Hellström, Lars
license	lppl = The LaTeX Project Public License (free)
version	<code>prot2.5</code>
description	(no language specified) Xdoc is a project to rewrite the implementation of the LaTeX doc package (in a broader sense) to make its features more general and flexible. For example, where doc only provides commands for documenting macros and environments, xdoc also provides commands for similarly documenting package options and switches. This is furthermore done in such a way that it is very easy to add more such commands for documenting things, such as e.g., templates (an important concept in the future LaTeX3) and program components for other languages (functions, classes, procedures, etc.). A side effect is that many minor bugs in doc are fixed.

The design aims to take advantage of many still experimental features of future versions of LaTeX, but since these are neither reasonably stable nor widely available, the configuration interfaces and package author commands of *xdoc* are likely to change. To still provide a stable interface for other packages to build upon, the actual package names include a "major version number" of sorts. The drop-in replacement package for standard doc is *xdoc2*; it requires nothing outside standard LaTeX2e.

The *docindex* / *docidx2e* package changes the index and list of changes typesetting so that none of the formatting has to be controlled via the index style file. The *docindex* package provides control of formatting via templates (nice interface, but requires several experimental packages), whereas the *docidx2e* package has traditional raw macro interfaces and works with standard LaTeX2e.

6769 **xellipsis** – Extremely configurable ellipses with formats for various style manuals

Web page on CTAN <https://ctan.org/pkg/xellipsis>

name	xellipsis
caption	Extremely configurable ellipses with formats for various style manuals
author	Goodman, Donald P.
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.0 (2018-04-15)
last changes	2018-04-15
year	2018
description	(no language specified) The xellipsis package provides a system for configuring (almost) every possible aspect of ellipses, including preceding and proceeding characters; the character itself; distances before and after each of these; and number of characters. It comes with both a compatibility option for standard LaTeX \ldots as well as preset package options for the Chicago Manual of Style (Turabian); the Bluebook; and MLA guidelines.

6772 xesearch – A string finder for XeTeX

Web page on CTAN <https://ctan.org/pkg/xesearch>

name	xesearch
caption	A string finder for XeTeX
author	Robbers, Yuri
author	Isambert, Paul
license	lppl = The LaTeX Project Public License (free)
version	0.2 (2019-04-24)
last changes	2019-04-24
year	2019
description	(no language specified) The package finds strings (e.g. (parts of) words or phrases) and manipulates them (apply any macro), thus turning each word or phrase into a possible command. It is written in plain XeTeX and should thus work with any format (it is known to work with LaTeX and ConTeXt). The main application for the moment is XeIndex, an automatic index for XeLaTeX, but examples are given of simple use to check spelling, count words, and highlight syntax of programming languages.

6777 *xetex* – An extended variant of TeX for use with Unicode sources

Web page on CTAN <https://ctan.org/pkg/xetex>

name	<i>xetex</i>
caption	An extended variant of TeX for use with Unicode sources
author	Hosny, Khaled
author	Kew, Jonathan
author	The TeX Live Team
author	Rosendahl, Arthur
license	x11 = X11 License (free)
description	(no language specified) XeTeX is a TeX typesetting engine using Unicode and supporting modern font technologies such as OpenType, TrueType or Apple Advanced Typography (AAT), including OpenType mathematics fonts. XeTeX supports many extensions that reflect its origins in linguistic research; it also supports micro-typography (as available in pdfTeX). XeTeX was developed by the SIL (the first version was specifically developed for those studying linguistics, and using Macintosh computers). XeTeX's immediate output is an extended variant of DVI format, which is ordinarily processed by a tightly bound processor (called <code>xdvipdfmx</code>), that produces PDF. XeTeX is released as part of TeX Live; documentation has arisen separately. Source code is available from ctan:/systems/texlive/Source/.

6787 *xevlna* – Insert non-breakable spaces using XeTeX

Web page on CTAN <https://ctan.org/pkg/xevlna>

name	<code>xevlna</code>
caption	Insert non-breakable spaces using XeTeX
author	Wagner, Zdeněk
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.1 (2017-03-25)
last changes	2017-03-25
year	2017
description	(no language specified) The package will directly insert nonbreakable spaces (in Czech, <code>vlna</code> or <code>vlnka</code>), after nonsyllabic prepositions and single letter conjunctions, while the document is being typeset. (The macros recognised maths and verbatim by TeX means.) (Inserting nonbreakable spaces by a preprocessor will probably never be fully reliable, because user defined macros and environments cannot reliably be recognised.) The package works both with (Plain) XeTeX and with XeLaTeX.

6788 xfakebold – Fake a regular font for bold characters

Web page on CTAN <https://ctan.org/pkg/xfakebold>

name	xfakebold
caption	Fake a regular font for bold characters
author	Voß, Herbert
copyright	Herbert Voß (2019-2023)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.10 (2023-11-21)
last changes	2023-11-21
year	2023
description	(no language specified) This package uses PDF's text rendering to modify the linewidth of an outline font to get bold characters. It works only for vectorfonts where the glyphs are defined by their outline. The package works both in text and in math mode, for pdfLaTeX as well as for LuaLaTeX. The package depends on iftex , xkeyval , and pdfrender .

last changes	2024-08-16
year	2024

description	(no language specified) This package is deprecated in favor of methods integrated into the LaTeX kernel from 2022-06-01. This package provides a LaTeX2e document-level interface to the LaTeX3 floating point unit (part of expl3). The expandable command <code>\fpeval</code> takes as its argument a floating point expression and will produce a result using the normal rules of mathematics. As this command is expandable it can be used where TeX requires a number and for example within a low-level <code>\edef</code> operation to give a purely numerical result. From 2022-06-01 release of LaTeX this will be included in the format so that the package doesn't need loading any longer.

6794 xgreek – Greek Language Support for XeLaTeX and LuaLaTeX

Web page on CTAN <https://ctan.org/pkg/xgreek>

name	xgreek
caption	Greek Language Support for XeLaTeX and LuaLaTeX
author	Syropoulos, Apostolos
copyright	Apostolos Syropoulos (2007-2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	3.5.0 (2025-01-28)
last changes	2025-01-28
year	2025
description	(no language specified) This package has been designed so to allow people to typeset Greek language documents using XeLaTeX or LuaLaTeX. It is released in the hope that people will use it and spot errors, bugs, features so to improve it. Practically, it provides all the capabilities of the greek option of the babel package. The package can be invoked with any of the following options: <code>monotonic</code> (for typesetting modern monotonic Greek), <code>polytonic</code> (for typesetting modern polytonic Greek), and <code>ancient</code> (for typesetting ancient texts). The default option is <code>monotonic</code>. The command <code>\setlanguage{<lang>}</code> activates the hyphenation patterns of the language <code><lang></code>. This, however, can only be done if the format file has not been built with the babel mechanism.

6803 xint – Expandable arbitrary precision floating point and integer operations

Web page on CTAN <https://ctan.org/pkg/xint>

Alias	xintexpr
name	xint
caption	Expandable arbitrary precision floating point and integer operations
author	Burnol, Jean-François
copyright	Jean-François Burnol (2013-2022, 2025)

license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.4o (2025-09-06)
last changes	2025-09-06
year	2025
description	(no language specified) Loading <code>xintexpr</code> provides <code>\xinteval</code> and <code>\xintfloateval</code>. <code>\xintfloateval</code> evaluates numerical expressions. The floating point precision defaults to 16 decimal digits and can be set by user. Trigonometry, exponential and logarithms are implemented up to a maximal precision of 62 decimal digits. <code>\xinteval</code> computes exactly with integers, fractions, and decimal numbers or numbers in scientific notation. Note though that multiplying two floating point numbers will about double the number of digits, and so on, because the algebra is done exactly. Both are compatible with expansion-only context. Loading <code>xintexpr</code> imports automatically various other modules that it depends upon. Among them: • <code>xinttools</code>: utilities such as expandable and non-expandable loops, • <code>xint</code>: macros implementing in particular the basic operations on arbitrarily long integers, • <code>xintbinhex</code>: conversions between decimal and binary, octal, or hexadecimal bases for arbitrarily long integers, • <code>xintfrac</code>: macros implementing in particular the basic operations on arbitrarily large fractions, decimal numbers, or numbers in scientific notation. Further modules of independent interest include <code>xintgcd</code>, <code>xintseries</code> and <code>xintcfrac</code>. You can use <code>xintexpr</code> (and the other components) with LaTeX (via <code>\usepackage</code>) or also with Plain TeX, OpTeX, or ConTeXt (via <code>\input xintexpr.sty</code>). All the components are documented in the file <code>xint.pdf</code>, which also contains the commented source code.

description	(no language specified) This package provides support for interactive computing sessions with etex (or pdfetex) executed on the command line, on the basis of the xintexpr and polexpr packages. Once xintsession is loaded, eTeX becomes an interactive computing software capable of executing arbitrary precision calculations, or exact calculations with arbitrarily big fractions. It can also manipulate polynomials as algebraic entities. Numerical variables and functions can be defined during the session, and each evaluation result is stored in automatically labeled variables. A file is automatically created storing inputs and outputs.

6806 xistercian – Cistercian numerals in LaTeX

Web page on CTAN	https://ctan.org/pkg/xistercian
name	xistercian
caption	Cistercian numerals in LaTeX
author	Spratte, Jonathan P.
copyright	Jonathan P. Spratte (2020-2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.3 (2025-04-13)
last changes	2025-04-13
year	2025
description	(no language specified) This package allows you to use Cistercian numerals in LaTeX. The glyphs are created using PGF and to a certain degree configurable. You can use Cistercian numerals as page numbers using <code>\pagenumbering{xistercian}</code>. The two main macros are: • <code>\cistercian{<counter>}</code> formats the LaTeX2e counter as a Cistercian numeral, • <code>\cisterciannum{<integer>}</code> formats the integer (given as a string) as a Cistercian numeral.

6808 *xkcdcolors* – *xkcd* names of colors

Web page on CTAN <https://ctan.org/pkg/xkcdcolors>

name	<code>xkcdcolors</code>
caption	<i>xkcd</i> names of colors
author	Giannetti, Romano
copyright	Romano Giannetti (2019-2023)
license	cc0 = CC0 1.0 (free)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0.2
description	(no language specified) In the year 2010, Randall Munroe on posted a really funny and nice article on <i>xkcd</i> . He made a very curious experiment: showing colors to a lot of people and asking to name each one. Afterward, he processed the data and sorted the names for each color by popularity — that means, how many people gave the same name to the same color. This package makes the collected color names usable with LaTeX.

6832 xpiano – An extension of the piano package

Web page on CTAN <https://ctan.org/pkg/xpiano>

name `xpiano`

caption An extension of the piano package

author Gregorio, Enrico

copyright Enrico Gregorio (2015)

license lpl1.3 = The LaTeX Project Public License 1.3 (free)

version 1.0 (2015-05-23)

last changes 2015-05-23

year 2015

description (no language specified) This package provides macros for typesetting virtual keyboards limited to two octaves for showing notes represented by a colored circle. Optionally, the number used for pitch analysis can be shown.

It is an extension of [piano.sty](#) by Émile Daneault, written in expl3 in answer to a couple of questions on TeX.StackExchange:

- <https://tex.stackexchange.com/questions/162184/>
- <https://tex.stackexchange.com/questions/246276/> .

It features extended syntax and several options, like setting the color, adding numbers for pitch analysis, one or two octaves, and others.

6836 xpunctuate – Process trailing punctuation which may be redundantWeb page on CTAN <https://ctan.org/pkg/xpunctuate>

name	xpunctuate
caption	Process trailing punctuation which may be redundant
author	Ratcliffe, Philip G.
copyright	Philip G. Ratcliffe (2012-2023)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.0 (2023-08-13)
last changes	2023-08-13
year	2023
description	(no language specified) The package provides commands enabling the user (or package writer) to insert punctuation after a macro. The method is similar to that of xspace , but goes further. The package provides the commands <code>\xperiod</code> , <code>\xcomma</code> and <code>\xperiodcomma</code> , which follow a similar procedure to that of <code>\xspace</code> , and insert punctuation <i>if and only if</i> it is necessary. It also provides <code>\xperiodafter</code> , <code>\xcommaafter</code> , <code>\xperiodcommaafter</code> and <code>\xspaceafter</code> , which all take one argument, the word or phrase to be punctuated. These then avoid problems with the spacing of periods and commas after emphasised words.

version	2.0 (2026-04-19)
last changes	2026-04-19
year	2026

description	(no language specified) This package provides a simple way to review LaTeX documents. It allows to highlight and/or hide changes to a document, and to add comments to the text. This will help you to keep track of the changes you make to a document, and to easily spot the changes made by others, while always having the option of compiling a clean version of the document. This package also offers a way to include comments in the text, which can be toggled on and off. This is useful for adding notes to the text, or for leaving comments to other authors.

caption	Saveboxes for repeating content without code replication, based on PDF Form XObjects
author	Grahn, Alexander
copyright	Alexander Grahn (2016-2022)
license	lppl = The LaTeX Project Public License (free)
version	0.18 (2022-08-04)
last changes	2022-08-04

year	2022
description	(no language specified) The package defines commands for saving content that can be repeatedly placed into the document without replicating DVI/PDF code in the output file, allowing for smaller file size of the final PDF and improved content caching for faster display in certain PDF viewers. The method makes use of ‘Form XObjects’ defined in the PDF specification. The user commands are modelled after the standard LaTeX commands <code>\savebox</code>, <code>\sbox</code>, <code>\usebox</code> and the <code>lrbox</code> environment. All common TeX engines and back-ends are supported: • pdfLaTeX, LuaLaTeX • LaTeX → dvips → ps2pdf/Distiller • (Xe)LaTeX → (x)dvipdfmx

6844 xsipa – Short XSAMPA-based commands for IPA transcription in LaTeX

Web page on CTAN <https://ctan.org/pkg/xsipa>

name	xsipa
caption	Short XSAMPA-based commands for IPA transcription in LaTeX
author	Akpoué, Kouamé Josué
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0 (2025-05-16)
last changes	2025-05-16
year	2025
description	(no language specified) This LaTeX package provides a lightweight phonetic transcription system inspired by XSAMPA. It translates modified XSAMPA sequences into proper IPA symbols, using either the tipa package (for pdfTeX users) or Unicode IPA symbols via xunicode (for XeTeX and LuaTeX users). The package was designed to simplify phonetic transcription in LaTeX by offering concise macros such as <code>\xsE</code> for <code>\textepsilon</code>, and <code>\xs*...*</code> as a shortcut for multi-symbol sequences (e.g., <code>\xs*EO*</code> for <code>ɛɔ</code>). These commands are modeled after XSAMPA but adapted for LaTeX compatibility — including custom replacements for reserved characters.

6846 xspace – Define commands that appear not to eat spacesWeb page on CTAN <https://ctan.org/pkg/xspace>

name	xspace
caption	Define commands that appear not to eat spaces
author	Carlisle, David
author	Høgholm, Morten
author	The LaTeX Project Team
copyright	David Carlisle, Morten Høgholm (2004-2006)
copyright	The LaTeX3 Project et al. (1993-2023)
copyright	David Carlisle (1991-1997)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.13 (2014-10-28)
last changes	2014-10-28
year	2014
description	(no language specified) The xspace package provides a single command that looks at what comes after it in the command stream, and decides whether to insert a space to replace one "eaten" by the TeX command decoder. The decision is based on what came after any space, not on whether there was a space (which is unknowable): so if the next thing proves to be punctuation, the chances are there was no space, but if it's a letter, there's probably a need for space. This technique is not perfect, but works in a large proportion of cases. The package is part of the latex-tools bundle in the LaTeX required distribution.

6865 *xymtex* – Typesetting chemical structures

Web page on CTAN <https://ctan.org/pkg/xymtex>

name	<i>xymtex</i>
caption	Typesetting chemical structures
author	Fujita, Shinsaku
copyright	Shinsaku Fujita (1993-2005, 2009, 2010, 2013)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	5.06
description	(no language specified) XyMTeX is a set of packages for drawing a wide variety of chemical structural formulas in a way that reflects their structure. The package provides three output modes: ‘LaTeX’, ‘PostScript’ and ‘PDF’. XyMTeX’s commands have a systematic set of arguments for specifying substituents and their positions, endocyclic double bonds, and bond patterns. In some cases there are additional arguments for specifying hetero-atoms on the vertices of heterocycles. It is believed that this systematic design allows XyMTeX to operate as a practical (device-independent) tool for use with LaTeX.

6876 *yathesis* – A LaTeX class for writing a thesis following French rules

Web page on CTAN <https://ctan.org/pkg/yathesis>

name	yathesis
caption	A LaTeX class for writing a thesis following French rules
author	Bitouzé, Denis
copyright	Denis Bitouzé (2012-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0.12 (2024-03-07)
last changes	2024-03-07
year	2024
description	(no language specified) The purpose of <i>yathesis</i> is to facilitate the typesetting of theses prepared in France, whatever the disciplines and institutes. It implements most notably recommendations from the Ministry of Higher Education and Research, and this transparently to the user. It has also been designed to (optionally) take advantage of powerful tools available in LaTeX, including packages:

- [BibLaTeX](#) for the bibliography;
- [glossaries](#) for the glossary, list of acronyms and symbols list.

The *yathesis* class, based on the book class, aims to be both simple to use and, to some extent, (easily) customizable.

yathesis comes with templates and samples in the `doc/latex/yathesis/french/exemples/` directory in the distribution. They can also be tested on ShareLaTeX ([template](#) and [specimen](#)) and on Overleaf ([template](#) and [specimen](#)).

Note: The ” *ya* ” in the package name stands for ”yet another”.

6881 ydoc – Macros for documentation of LaTeX classes and packages

Web page on CTAN <https://ctan.org/pkg/ydoc>

name	ydoc
caption	Macros for documentation of LaTeX classes and packages
author	Scharrer, Martin
copyright	Martin Scharrer (2011-2022)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.7alpha (2022-10-26)
last changes	2022-10-26
year	2022
description	(no language specified) The package provides macros and environments to document LaTeX packages and classes. It is an (as yet unfinished) alternative to the <code>ltxdoc</code> class and the <code>doc</code> or <code>xdoc</code> packages. The aim is to provide a different layout and more modern styles (using the <code>xcolor</code>, <code>hyperref</code> packages, etc.) This is an alpha release, and should probably not (yet) be used with other packages, since the implementation might change. Nevertheless, the author uses it to document his own packages.

6897 *yquant* – Typesetting quantum circuits in a human-readable language

Web page on CTAN <https://ctan.org/pkg/yquant>

name	yquant
caption	Typesetting quantum circuits in a human-readable language
author	Desef, Benjamin
copyright	Benjamin Desef (2019-2023)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.7.5 (2023-11-26)
last changes	2023-11-26
year	2023

description	(no language specified) This LaTeX package allows to quickly draw quantum circuits. It bridges the gap between the two groups of packages that already exist: those that use a logic-oriented custom language, which is then translated into TeX by means of an external program; and the pure TeX versions that mainly provide some macros to allow for an easier input. yquant is a pure-LaTeX solution — i.e., it requires no external program — that introduces a logic oriented language and thus brings the best of both worlds together. It builds on and interacts with TikZ, which brings an enormous flexibility for customization of individual circuit.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/graphics/pgf/contrib/yquant/README.md

6900 *yt4pdf* – Play YouTube videos in a PDFWeb page on CTAN <https://ctan.org/pkg/yt4pdf>name *yt4pdf*

caption Play YouTube videos in a PDF

author Story, Donald P.

copyright D. P. Story (2010-2016)

license lpl1 = The LaTeX Project Public License 1 (free)

version (2016-10-04)

last changes 2016-10-04

year 2016

description (no language specified) The package uses the [rmannot](#) package to embed a special SWF file to play the YouTube videos. There is a complete set of buttons that come with the package to control the video: play, pause, stop loading, rewind, load a video by its YouTube video ID, and a button to view a video on the YouTube web site.

This package is now obsolete, since the author told us in July 2020: "I am withdrawing my package *yt4pdf* from CTAN. It is based on the Flash play, which is no longer supported in PDF." You may wish to use its successor [ltx4yt](#) instead.

name	<i>zaccone</i>
caption	Different configuration for different captions
license	noinfo = noinfo
version	(1993-11-08)
last changes	1993-11-08
year	1993

description	(no language specified) A LaTeX 2.09 package to provide different caption formats according to the float they are in. The package defines formats for figure and table captions (with the table captions arranged to sit above the table); however the author's intention was (apparently) that the user should edit the package to set up their own formatting.

6908 *zeckendorf* – Knuth Fibonacci multiplication, Zeckendorf and Bergman representations of big integersWeb page on CTAN <https://ctan.org/pkg/zeckendorf>

name	zeckendorf
caption	Knuth Fibonacci multiplication, Zeckendorf and Bergman representations of big integers
author	Burnol, Jean-François
copyright	Jean-François Burnol (2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.9d (2025-11-16)
last changes	2025-11-16
year	2025
description	(no language specified) This package extends the <code>\xinterval</code> syntax to do algebra in $\mathbb{Q}(\phi)$ (where ϕ is the golden ratio), and compute Fibonacci numbers, Zeckendorf representations of positive integers and Bergman ϕ-representations of the positive elements of $\mathbb{Z}[\phi]$. The <code>\$</code> character is used to compute the Knuth Fibonacci multiplication. The package can be used either in a LaTeX document, or with Plain eTeX, or on the command line in an interactive session using eTeX. Being based upon xintexpr, it allows to compute with "arbitrarily" big integers, the reasonable use being with integers of at most a few hundreds of digits.

version	1.0e (2019-05-15)
last changes	2019-05-15
year	2019
description	(no language specified) This package supports typesetting CJK documents. It allows users to specify the two ratios between the leading and the font size of the body text and the footnote text. For CJK typesetting, these ratios usually range from 1.5 to 1.67. This package is also capable of restoring the math leading to that of the Latin text (usually 1.2 times the font size). Finally, it is possible to achieve the <i>Microsoft Word multiple line spacing</i> style using <code>zhlineskip</code> .

6928 *zref* – A new reference scheme for LaTeX

Web page on CTAN <https://ctan.org/pkg/zref>

name	<code>zref</code>
caption	A new reference scheme for LaTeX
author	Oberdiek, Heiko
copyright	Heiko Oberdiek (2006-2012)
copyright	Oberdiek Package Support Group (2016-2026)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.37 (2026-03-07)
last changes	2026-03-07
year	2026
description	(no language specified) This package offers a means to remove the limitation, of only two properties, that is inherent in the way LaTeX's reference system works. The package implements an extensible referencing system, where properties may be defined and used in the course of a document. It provides an interface for macro programmers to access the new reference scheme and some modules that use it.

Modules available are:

- `zref-user` , use `zref` for "traditional" labels and references;
- `zref-abspage` , retrieve absolute page numbers (physical pages, as opposed to the 'logical' page number that is normally typeset when a page number is requested);
- `zref-lastpage` , provide a `zref-label` for the last page of the document;
- `zref-nextpage` , provide the page number of the next page of the document;
- `zref-totpages` , provide the total number of pages in the document;
- `zref-pagelayout` , provide the page layout parameters of a each page (which may then be printed at the end of the document);
- `zref-perpage` , make a counter reset for each new page;
- `zref-titleref` , make section title or caption text available through the reference system; `zref-savepos` , make positions on a page available;
- `zref-dotfill` , controlled dot-filling;
- `zref-env` , record the latest environment's name and the line it started on; and

- `zref-xr`, provide the facilities of the `xr` and `xr-hyper` packages.

6929 `zref-check` – Flexible cross-references with contextual checks based on `zref`

Web page on CTAN <https://ctan.org/pkg/zref-check>

name	<code>zref-check</code>
caption	Flexible cross-references with contextual checks based on <code>zref</code>
author	<code>gusbrs</code>
copyright	<code>gusbrs</code> (2021-2024)
license	<code>lppl1.3c</code> = The LaTeX Project Public License 1.3c (free)
version	0.3.7
description	(no language specified) This package provides an user interface for making LaTeX cross-references flexibly, while allowing to have them checked for consistency with the document structure as typeset. Statements such as "above", "on the next page", "previously", "as will be discussed", "on the previous chapter" and so on can be given to <code>\zcheck</code> in free-form, and a set of "checks" can be specified to be run against a given "label", which will result in a warning at compilation time if any of these checks fail.

`\zctarget` and the `zcregion` environment are also defined as a means to easily set label targets to arbitrary places in the text which can be referred to by `\zcheck`.

Web page on CTAN <https://ctan.org/pkg/zref-clever>

name	<code>zref-clever</code>
caption	Clever LaTeX cross-references based on zref
author	gusbrs
copyright	gusbrs (2021-2024)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.5.1 (2024-11-28)
last changes	2024-11-28
year	2024

description	(no language specified) This package provides a user interface for making LaTeX cross-references which automates some of their typical features, thus easing their input in the document and improving the consistency of typeset results. A reference made with <code>\zceref</code> includes a "name" according to its "type", and lists of multiple labels can be automatically sorted and compressed into ranges when due. The reference format is highly and easily customizable, both globally and locally. The package is based on zref 's extensible referencing system.

A Used topics, short explanations

<code>abbrev</code>	macros for defining abbreviations in documents
<code>abstract</code>	typeset abstracts of documents
<code>accessible</code>	accessibility support
<code>acrobat</code>	relies on availability of Adobe Acrobat, etc.
<code>acronym</code>	define and use acronyms
<code>addr-list</code>	lists of addresses, for a personal directory (or the like)
<code>adobe-distiller</code>	convert PostScript to PDF using Adobe Distiller
<code>advert</code>	small advertisements, fly sheets, etc.
<code>albanian</code>	support for typesetting Albanian
<code>alignment</code>	tables, tab structures, etc
<code>alignment-supp</code>	ancillary code for tables, tab structures, etc
<code>amharic</code>	support for typesetting Amharic
<code>amusements</code>	jokes, distractions, tongue-in-cheek packages, and other entertainment material
<code>android</code>	usable under Android
<code>apa</code>	typesetting according to the rules of the American Psychological Association
<code>appendix</code>	typesetting and using appendices
<code>arabic</code>	documentation in and support for typesetting Arabic
<code>arch-tree</code>	root directory of a (sub-)tree of the archive
<code>archival</code>	creating archival copies, or copies for distribution
<code>arithmetic</code>	perform and typeset arithmetic problems
<code>armenian</code>	support for typesetting Armenian
<code>article-like</code>	LaTeX article classes and their developments
<code>astrology</code>	fonts and typesetting for astrologers
<code>astronomy</code>	astronomy articles, astronomical charts
<code>automata</code>	finite-state machines, automata, labelled graphs, etc.
<code>azerbaijani</code>	support for typesetting Azerbaijani
<code>background</code>	decorate/confuse text by adding a background
<code>bahasa-indonesia+malaysia</code>	support for typesetting Bahasa Indonesia/Malaysia

A Used topics, short explanations

barcode	barcodes and other machine-readable tags
basque	support for typesetting Basque
belarusian	support for typesetting Belarusian
bengali	support for typesetting Bengali
bib-use	place non-bibliography material in the bibliography
biblatex	BibLaTeX bibliography support
biblio	bibliography processor
biblio-supp	support for manually-written bibliographies
bibtex-annotate	BibTeX annotation styles
bibtex-doc	documentation of BibTeX, etc., on their own
bibtex-gen	derive BibTeX data from resources other than BibTeX libraries
bibtex-lib	collection of BibTeX citations
bibtex-multi	multiple BibTeX bibliographies in a document
bibtex-supp	BibTeX citation support
bibtex-util	utilities for managing BibTeX files
bidirectional	support bidirectional typesetting
biology	typeset biological data
biomedical	support for documents in biomedical research
blank-page	control of blank pages in a document
book-ex	copies of examples from a published book
book-pub	preparing a book for publication
book-src	source of a published book
bosnian	support for typesetting in Bosnian
botany	typeset botanical data
box-breaking	breaking boxes over a page boundary, etc
box-manip	manipulating boxes
boxing	creating boxes
breton	support for typesetting in Breton
bugfix	correct a problem, ahead of the “proper” fix
bulgarian	support for typesetting and documentation in Bulgarian
bundle	pack files up for distribution or archiving

A Used topics, short explanations

burmese	support for typesetting Burmese
bus-study	typeset material for Business Studies
calculation	perform calculations within TeX
calendar	typeset calendars, diaries, planning charts, etc.
callback	call external code and process the result
caption	typesetting captions
card-flash	typesetting ‘flash’ cards for teaching and learning
card-gen	cards for miscellaneous purposes
cartography	map production and geographical data usage
catalan	documentation in and support for typesetting Catalan
catalogue	typeset catalogue data
cgi-latex	support for LaTeX(-alike) on the web, or feeding into other applications
chemistry	chemistry document support
cherokee	support for typesetting Cherokee
chess	chess game
chinese	support for typesetting Chinese languages
chinese-doc	documentation in Chinese languages
chords	chord notations, as for song books
chunks	extract chunks of a document for separate processing
churchslavonic	support for typesetting Church Slavonic
cite-foot	citations in footnotes
cite-supp	citation support
class	alternative LaTeX class(es)
class-ext	export features from a class for use elsewhere
class-supp	support for class (and package) development
code-layout	improve the appearance of LaTeX code
collection	a collection of packages
colour	typesetting in colour
comp-mgmt	control TeX’s behaviour during compilation
comp-net	typeset computer network concepts
comp-sci	typeset computer-science related material

A Used topics, short explanations

comp-supp	support for preparing documents
comp-theory	typeset theoretical computer science material
compact-print	compact output, typically multiple pages/sheet
compilation	the document compilation process
cond-comp	conditional typesetting
confproc	typesetting conference proceedings
context	macros of, or for use with, ConTeXt
context-doc	documentation of ConTeXt
cooking	typesetting cooking recipes, etc
coptic	support for typesetting coptic
counter-mgmt	management of counters
course-material	course material
covers	typeset badges, covers or labels for things (or people)
crit-ed	typeset scholarly editions of texts
croatian	support for typesetting Croatian
crystallography	typeset material to do with crystallography
csv-support	read, process and convert CSV data
ctan	support for work with the CTAN archive
cv	curriculum vitae/Resumé
cvt-html	generate HTML from TeX-ish sources
cvt-other	convert TeX-ish sources to some other markup (than HTML)
cwpuzzle	crossword puzzle
cyrillic	support languages written using Cyrillic alphabets
czech	support for typesetting Czech
czech-doc	documentation in Czech
danish	support for typesetting, or documentation in Danish
data-disp	visualisation of data sets
data-import	importing data into documents
data-manip	manipulate data within TeX
data-prep	prepare data for use within TeX
data-sel	select data from sets in the TeX file

A Used topics, short explanations

date-time	manipulate dates and/or times
db-access	access database for document contents
debug-supp	support for package or document debugging
decoration	highlighting typeset material, fancy frames, watermarks, etc.
defer-stuff	saving things for later use
demo-code	code that serves as examples of TeX programming
diagram	diagrams
diagram-block	block diagrams
diagram-circ	circuit diagrams
diagram-comm	commutative diagrams
diagram-ctrl	control diagrams
diagram-flow	flow (and similar) diagrams, including Nassi-Shneiderman
diagram-lab	schematic details of laboratory work
diagram-maths	diagrams used in mathematics
diagram-tmg	timing diagrams
dictionary	macros that support preparation of dictionaries, lexicons, etc
dissertation	typesetting dissertations, theses, etc.
distribution	components (or support) of TeX distribution
doc-debug	tools, etc., for “debugging” documents
doc-errata	lists of errata in published books
doc-gen	generate a document by collating other text
doc-mgmt	support for keeping track of document development
doc-style	LaTeX 2.09 document style
doc-supp	macros and tools for preparing documentation
doc-templ	template to guide document development
doc-tool	document development tools
docu-pkg	documentation of another package
documentation	‘stand-alone’ documentation
drama-script	typeset scripts for plays, etc.
dummy-gen	dummy text generator for tests and examples
dutch	support for typesetting Dutch

A Used topics, short explanations

dutch-doc	documentation in Dutch
dvi-bit	generate graphic bitmaps from DVI files
dvi-pdf	convert DVI files to PDF
dvi-prev	preview DVI files
dvi-print	convert DVI files for (direct) printing, etc.
dvi-proc	DVI processor
dvi-struc	create and/or process text representation of a DVI file
dvi-text	DVI output to plain text
dvips-special	use dvips \special commands
ebook	support for preparing e-books
editor	editor designed (or adapted) for use with (La)TeX
editor-extn	plug-ins for editors, for better (La)TeX and Meta* support
editorial	editor's marks, highlights, etc.
editorial-consistency	ensure consistency of usage
electronic	support of electronic design
emphasis	emphasising text
emulation	code to emulate “other things”
enc-juggle	conversion between encodings
endnote	notes typeset at end document
engine	TeX (or TeX-alike) typesetting engine
engineering	typesetting associated with engineering of whatever sort
english	typesetting specific to English
env-query	examine the TeX programming environment
epigram	short quotation typically associated with the start of a chapter
error-supp	control of LaTeX error messages
esperanto	support for typesetting Esperanto
essay	course work essays, assignments, etc.
estonian	support for typesetting Estonian
etex	requires e-TeX
exam	exams, quizzes, etc.
exec-foreign	execute ‘other types’ of language

A Used topics, short explanations

<code>exercise</code>	exercises, problems for solution, etc.
<code>experimental</code>	offer of a facility that may never make its way to production use
<code>ext-code</code>	run an external program from within a document
<code>ext-svc</code>	link to a service not on CTAN
<code>fac-survey</code>	survey of TeX-related facilities
<code>fake-glyph</code>	provide a glyph by construction, rather than from a font
<code>faq</code>	frequently asked questions, with answers
<code>file-card</code>	typeset cards for business, filing, etc.
<code>file-control</code>	manipulation of TeX macro file i/o
<code>file-mgmt</code>	TeX-related-file management
<code>finnish</code>	support for typesetting Finnish
<code>finnish-doc</code>	documentation written in Finnish
<code>fit-to-size</code>	set up things to fit in a given space
<code>float</code>	typesetting floats
<code>font</code>	fonts themselves
<code>font-abnormal</code>	font in an irregular format
<code>font-absent</code>	support is for a font not available on CTAN
<code>font-adhoc</code>	font distributed in an ad-hoc fashion
<code>font-arabic</code>	fonts for typesetting arabic
<code>font-archaic</code>	fonts reproducing archaic scripts or inscriptions
<code>font-armenian</code>	fonts for typesetting armenian
<code>font-bbd</code>	doublestroke (blackboard bold) fonts
<code>font-body</code>	font designed for use as body font for Latin-based script documents
<code>font-bookhand</code>	fonts of scripts used for manuscript books
<code>font-calligraphic</code>	calligraphic (or handwriting) fonts
<code>font-canadian-aboriginal</code>	fonts for Canadian Aboriginal
<code>font-chess</code>	fonts for typesetting chess problems and diagrams
<code>font-cjk</code>	fonts for far eastern languages (Chinese, Japanese and Korean)
<code>font-cm</code>	font serving Computer Modern-style shapes
<code>font-collection</code>	listing a set of related fonts
<code>font-coptic</code>	fonts for coptic script

A Used topics, short explanations

<code>font-cvt</code>	convert a font to a form usable with TeX
<code>font-cyrillic</code>	fonts for Cyrillic and related scripts
<code>font-decor</code>	decorative or initial fonts
<code>font-devel</code>	support for font development, testing and characterisation
<code>font-display</code>	display-style font
<code>font-doc</code>	documentation about choosing installing and using fonts
<code>font-egyptian</code>	hieroglyph fonts
<code>font-georgian</code>	fonts for typesetting georgian
<code>font-gothic</code>	font for gothic or blackletter shapes
<code>font-greek</code>	font for Greek (archaic, classical and modern)
<code>font-hebrew</code>	font for Hebrew script
<code>font-historical</code>	fonts for a script or language now obsolete
<code>font-index</code>	lists of glyphs available from font(s)
<code>font-indic</code>	fonts for languages of the Indian subcontinent
<code>font-invented</code>	font for an ‘invented’ language or script
<code>font-maths</code>	fonts for use in mathematics
<code>font-medieval</code>	fonts for Medieval script
<code>font-mf</code>	fonts distributed as Metafont source
<code>font-mgmt</code>	management of fonts
<code>font-mono</code>	monospaced font
<code>font-multilingual</code>	font with adaptations to several languages
<code>font-music</code>	fonts of music symbols
<code>font-nonroman</code>	fonts for “other” non-Roman scripts
<code>font-novelty</code>	fonts designed more for fun than for actual use
<code>font-ornmnt</code>	fonts of typographic ornaments
<code>font-otf</code>	font in OpenType format
<code>font-proc</code>	process fonts for use with TeX (includes installation)
<code>font-proportional</code>	variable-spaced font
<code>font-rune</code>	fonts for runic inscriptions
<code>font-sample</code>	samples of font usage
<code>font-sans</code>	sans-serif font

A Used topics, short explanations

<code>font-sel</code>	font selection schemes
<code>font-serif</code>	serif font
<code>font-sfd</code>	FontForge font file
<code>font-specialist</code>	fonts with specific small application areas
<code>font-supp</code>	metrics, macro incantations and other font support
<code>font-supp-maths</code>	metrics, macro incantations and other support for maths fonts
<code>font-supp-misc</code>	metrics, macro incantations and other support for miscellaneous fonts (not on CTAN)
<code>font-supp-symbol</code>	metrics, macro incantations and other support for symbol fonts
<code>font-symbol</code>	fonts that provide collections of symbols
<code>font-symbol-maths</code>	collections of mathematical symbols
<code>font-tlenc</code>	font providing LaTeX T1 encoding support
<code>font-thai</code>	font for typesetting Thai script
<code>font-ttf</code>	font available in TrueType format
<code>font-type1</code>	font available in Adobe Type 1 format
<code>font-use</code>	font selection, mapping, etc.
<code>font-util</code>	manipulate or examine fonts
<code>font-virtual</code>	virtual font(s) using existing fonts
<code>fontenc</code>	support for font encodings
<code>footnote</code>	footnote support
<code>foreign-import</code>	import files in a non-TeX (or different TeX) format
<code>form-fillin</code>	design forms for information collection
<code>formal-spec</code>	typeset formal specification languages
<code>format</code>	macros to build a format
<code>format-cvt</code>	convert one format of file to another
<code>french</code>	support for typesetting French
<code>french-doc</code>	documentation in French
<code>frivolous</code>	TeX code as a source of humour
<code>games</code>	process game diagrams, gamebooks, and other amusements
<code>gantt</code>	real-time scheduling Gantt charts
<code>gen-paper</code>	paper (simply) for communication, not necessarily for publication
<code>genchart</code>	drawing bar- or pie-charts

A Used topics, short explanations

genealogy	typesetting genealogical information
gentex	generate (La)TeX from other sorts of sources
geometry	change geometry of page layout
geometry-adj	temporarily adjust page layout
georgian	support for typesetting Georgian
german	support for typesetting German
german-doc	documentation in German
glossary	glossary and nomenclature support
go	go game
graphics	graphics (support packages)
graphics-3d	graphics with 3-dimensional output
graphics-curve	draw (parametric) curves
graphics-doc	documentation of techniques for using graphics
graphics-driv	‘driver’ for output from graphics ‘kernel’ packages
graphics-editor	graphics editor whose output is good for TeX
graphics-engn	graphics generator whose output is good for use with TeX
graphics-epspdf	converting graphics files from MetaPost output or (E)PS to embeddable PDF
graphics-fill-tile	graphics filling or tiling an area
graphics-import	convert a foreign graphics format for use with TeX
graphics-in-tex	graphics produced by one of the *TeX engines
graphics-incl	include external graphics
graphics-inline	graphics inline for external processing
graphics-manip	manipulate graphics and/or related text
graphics-motion	motion graphics
graphics-mpost	graphics generated using MetaPost
graphics-plot	plot data
graphics-plotfn	plot a representation of a function
graphics-prep	prepare graphics for use with *TeX
graphics-subpic	generate parts of pictures
graphics-supp	support for other packages or for drivers
graphics-symb	create symbols, rather than select from a font

A Used topics, short explanations

graphics-text	text within graphics (drawn or overlaid)
graphics-use	graphics (typesetting actual pictures)
greek	support for typesetting Greek
greek-doc	documentation in Greek
headings	chapter, section, etc., heading styles
hebrew	documentation in and support for typesetting Hebrew
humanities	support for studies in the humanities
hungarian	support for typesetting Hungarian
hyper	support for hypertext
hyph-gen	support for generating or improving hyphenation tables
hyph-pseudo	splitting without benefit of hyphenation
hyphenation	macros or tables for hyphenation
icelandic	support for typesetting the Icelandic language
ide	integrated development environments
image-supp	manipulating images for inclusion in documents
index	index support
index-auth	index of referenced authors
index-multi	multiple indexes in a document
index-proc	process and/or generate index material
indic	support for languages of the Indian subcontinent
inputenc	input encoding support for TeX engines
install-mgmt	support for (La)TeX installations
interlingua	support for typesetting interlingua
invoice	typesetting and calculating invoices
io-mgmt	manage TeX's limited i/o streams
irish-gaelic	support for typesetting the Irish (gaelic) language
italian	support for typesetting Italian
italian-doc	documentation in Italian
japanese	support for typesetting Japanese
japanese-doc	documentation in Japanese
journ-digest	digests/partial information about journals

A Used topics, short explanations

<code>journal-extract</code>	selections of journals, etc.
<code>journal-personal</code>	personal journals, diaries, etc.
<code>journal-src</code>	sources and/or old copies of journals
<code>journalpub</code>	typesetting journals, etc
<code>keyval</code>	key-value argument systems
<code>korean</code>	support for typesetting Korean
<code>korean-doc</code>	documentation in Korean
<code>kurdish</code>	support for typesetting Kurdish
<code>kurmanji</code>	support for typesetting Kurmanji
<code>label-ref</code>	label and reference systems
<code>labels</code>	typeset sets of labels (for cutting out, etc.)
<code>landscape</code>	print landscape orientation, manipulate landscape material
<code>lang-invented</code>	support for typesetting invented language(s)
<code>latex-devel</code>	LaTeX experimental developments ‘in the wild’
<code>latex-qual</code>	encourage quality in LaTeX markup
<code>latex209</code>	package only known to work with LaTeX 2.09
<code>latex3</code>	work done for the project to upgrade LaTeX
<code>latin</code>	support for typesetting Latin (ancient, medieval and ‘modern’)
<code>latvian</code>	support for typesetting Latvian
<code>layout</code>	layout of objects on the page
<code>layout-page</code>	page trim marks and decorations
<code>layout-show</code>	display details of page layout
<code>layout-supp</code>	provide marks to assist in layout design
<code>leaders</code>	typeset leaders, etc.
<code>legal</code>	typesetting legal documents or study material
<code>letter</code>	typesetting letters, envelopes, faxes, etc
<code>letterspace</code>	change space between characters
<code>lettrine</code>	drop capitals and flow text around them
<code>licence-mgmt</code>	manage application of licence information
<code>line-nos</code>	number the typeset lines
<code>line-patt</code>	patterning lines (dashes, etc)

A Used topics, short explanations

<code>line-space</code>	leading between lines of text
<code>line-weight</code>	control the weight of rules, etc., in text
<code>linguistic</code>	support for linguistics
<code>list</code>	list: general
<code>list-bull</code>	list: items bulleted
<code>list-descr</code>	list: items described
<code>list-enum</code>	list: items enumerated
<code>list-supp</code>	list support
<code>listing</code>	computer code listing
<code>lithuanian</code>	support for typesetting Lithuanian
<code>litprog</code>	literate programming
<code>log-manip</code>	analyse or otherwise manipulate logs
<code>logic</code>	typesetting logician's discussions
<code>logo</code>	symbols or drawings to specify an object, including icons
<code>lua-supp</code>	support for using Lua code
<code>luatex</code>	LuaTeX and packages that require it
<code>luatex-doc</code>	documentation of LuaTeX and related packages
<code>lyx</code>	adapted for use with lyx
<code>macedonian</code>	documentation in, and support for typesetting Macedonian
<code>macro-def</code>	alternative ways of defining macros
<code>macro-demo</code>	print (La)TeX code verbatim alongside the rendered result
<code>macro-gen</code>	macros that are independent of the (TeX) format in use
<code>macro-iterate</code>	repeat TeX material
<code>macro-sort</code>	sort data within TeX macros
<code>macro-supp</code>	support for development of (La)TeX macros
<code>magazine</code>	magazines, newspapers and other ephemeral publications
<code>mail-list</code>	digests, etc., of mailing lists
<code>mailing</code>	mail merge, etc
<code>maltese</code>	support for typesetting Maltese
<code>manju</code>	support for typesetting Manju
<code>marathi</code>	support for typesetting Marathi

A Used topics, short explanations

marginal	marginal notes, etc.
markup	alternative markup scheme
mat-sci	typeset matter relevant to Materials Science
maths	support for typesetting mathematics
maths-doc	documentation of typesetting mathematics
maths-symbol	construction or application of mathematical symbols
maths-syseqn	systems of equations
maths-tabvar	mathematical tables of signs and variations
maths-theorem	typeset mathematical theorems
matrix	typeset matrices
measure	measure and report details of a document
medical	typesetting medical material
meeting-admin	calls, agendas, minutes of meetings
memorandum	typeset memorandum or other short note
messages	manage messages to the user
metadata	process document metadata
mf-doc	documentation for Metafont users
micro-layout	paragraph shapes, margin adjustments, etc.
misc-conv	miscellaneous conversions
misc-paper	discussion/working paper (rather than journal paper)
misc-support	miscellaneous support stuff
mobile	support for mobile use
molbio	support for typesetting molecular biology
mongolian	support for typesetting Mongolian
mongolian-doc	documentation in Mongolian
mp-doc	documentation for MetaPost users
mp-supp	support tools and macros for MetaPost programming
mp-use	use, and support for use, of MetaPost
multicol	more than one column on the page
multilingual	support for more than one (natural) language
multilingual-addon	extra language ‘drivers’ for existing multilingual packages

A Used topics, short explanations

multimedia	support for multimedia in documents
music	typesetting music and related stuff
music-extinp	external input sources for music
neuro	typesetting neuroscience material
non-bibtex	support for bibliographies created without using a biblio processor
norwegian	support for typesetting Norwegian
notes	general notes (not including endnotes or footnotes)
novelty	packages with little obvious application
numbers	formatting numbers, etc
obscurity	simple rotation or substitution ciphers
obsolete	package declared obsolete
occitan	support for typesetting Occitan
off	use of opentype font features
omega	Omega and packages that use it
optics	diagrams of optical systems
optimise	optimise part of a TeX system
other-lang	support for a language whose support is not otherwise catalogued
outline	document outlining tools
package-devel	support for package development
package-doc	markup for documenting package sources
package-mgmt	support for managing packages within documents
package-supp	support for other packages
page-control	select pages to be output, etc.
page-hf	page head- and foot-lines
page-nos	control sequence and typesetting of page numbers
para-deco	decorating paragraphs (letrines, etc.)
parallel	parallel columns
paren-mgmt	match and otherwise manage parentheses
parser	parser application
parshape	non-standard paragraph shapes
patent	prepare a patent application

A Used topics, short explanations

pdf-feat	access PDF features
pdf-forms	create pdf form fields, use form fields as an integral part of the package
pdf-view	view, or control viewing of, PDF
pdfprocess	process PDF files
persian	support for typesetting Persian
persian-doc	documentation in Persian
pgf-tikz	package uses PGF-TikZ
philosophy	support for typesetting philosophy
phonetic	support for phonetic notation
physics	support for typesetting physics documents
piedmontese	support for typesetting Piedmontese
plain-ext	extensions to Plain TeX for higher-level constructs
plain-text	derive plain text from a TeX document
planning	construct diagrams, etc., for planning
polish	support for typesetting Polish
polish-doc	documentation in Polish
portuguese	support for typesetting Portuguese
portuguese-br	support for typesetting Brazilian Portuguese
portuguese-doc	documentation in Portuguese
poster	typeset posters, etc.
pre-release	developing version of new software
preamble-admin	construction of a LaTeX document preamble
prepress	fine-tuning details of output, for printing
preprocessor	preprocesses source before using TeX
presentation	slides, beamers, handouts, etc.
previewer	application for viewing a typeset document on screen
print-app	application for printing documents
probability	typeset reports, etc., of probability
production	support for production printing, etc
program-doc	support for programming documentation
project-mgmt	TeX-related project management

A Used topics, short explanations

proof	typeset proofs and proof diagrams
proposal	typeset proposals to funding bodies, etc
protection	manipulate the LaTeX ‘protect’ mechanism
ps-manip	manipulate PostScript files
pseudocode	typeset languages for expressing algorithms
pstricks	package using PStricks for graphical output
psychology	support for typesetting texts relating to psychology
publicity	press releases, etc
publisher	prepare documents for a specific publisher
puzzle	problems and puzzles, and their solutions
qrcode	typeset quick response codes
quotation	displayed text
quotation-imp	import text from other documents
quotation-mgmt	organisation of displayed text
quote-marks	manage (possibly language dependent) quote marks
random	generate and/or use pseudo-random numbers
record-keep	formatting material that constitutes records
ref-latex	LaTeX reference documents
report-like	regularly-formatted reports
review-document	document reviewing subjects relevant for TeX users
romanian	support for typesetting Romanian
rotation	rotate typeset objects on their page
rule	produce rules within a document
russian	support for typesetting Russian
russian-doc	documentation in Russian
safety-notice	risk and safety (etc.) notices
samin	support for typesetting samin
sanskrit	support for typesetting Sanskrit
scientific-docs	support for writers of scientific documents
scottish	support for typesetting Gaidhlig (Scottish Gaelic)
security	document security measures

A Used topics, short explanations

<code>semproc</code>	typesetting seminar proceedings
<code>serbian</code>	documentation in, and support for typesetting Serbian
<code>shortcut</code>	shortcuts when typing
<code>simplified</code>	simplified markup
<code>slovak</code>	support for typesetting, and documentation in Slovak
<code>slovenian</code>	support for typesetting, and documentation in Slovenian
<code>somali</code>	support for typesetting Somali
<code>sorbian</code>	support for typesetting Sorbian
<code>spanish</code>	support for typesetting Spanish
<code>spanish-doc</code>	documentation in Spanish
<code>spec-alphabet</code>	specialised versions of alphabets
<code>spell</code>	TeX-aware spelling checker
<code>statistics</code>	typeset reports, diagrams, etc., of statistics
<code>std-conform</code>	support conformance to standards
<code>std-spec</code>	standards, or other normative documents, about TeX and friends
<code>string</code>	text string searches and manipulation
<code>struc-mkup</code>	structured markup
<code>subdocs</code>	include complete documents in other documents
<code>subfloat</code>	internal structure within a float
<code>subsup-pos</code>	position sub- and superscripts (left and right sides)
<code>sudoku</code>	sudoku game
<code>swedish</code>	support for typesetting Swedish
<code>swiss</code>	typesetting as done in Switzerland
<code>symbol-sup</code>	manage symbols in a document
<code>synt-hlt</code>	highlight syntax of computer code, etc.
<code>syntax</code>	syntax of computer science constructs
<code>sys-sup</code>	os-level support facilities for TeX
<code>table</code>	table typesetting
<code>table-long</code>	typeset tables that may be too big for a page
<code>table-rule</code>	rules within tables
<code>tagged-pdf</code>	tagged PDF compatible

A Used topics, short explanations

<code>tagged-pdf-incompatible</code>	tagged PDF incompatible
<code>tagged-pdf-partially</code>	tagged PDF partially compatible
<code>tagged-pdf-unsupported</code>	tagged PDF unsupported
<code>teaching</code>	support for teachers and teaching administrators
<code>test-bed</code>	environment for testing (La)TeX code
<code>test-dist</code>	proposed additions to other packages
<code>text-flow</code>	flow text round an insertion in the paragraph
<code>text-layout</code>	layout of text within paragraphs
<code>text-manip</code>	manipulate strings (typically in token lists)
<code>text-symbol</code>	symbols for use in text
<code>thai</code>	support for typesetting, and documentation in Thai
<code>theology</code>	typeset devotional texts and other material of interest to theologians
<code>tibetan</code>	support for typesetting Tibetan
<code>timetable</code>	schedules of operations, courses, etc.
<code>titlepage</code>	typesetting title pages for documents
<code>toc-etc</code>	deal with Tables of Contents, and of other such things
<code>translation</code>	translation of material from the archive, to another language
<code>tree</code>	mechanisms for drawing trees
<code>turkish</code>	documentation in, and support for typesetting Turkish
<code>turkmen</code>	documentation in, and support for typesetting Turkmen
<code>tut-cheat</code>	tutorial “cheat-sheet”
<code>tut-latex</code>	tutorial material for LaTeX
<code>tut-latex-prg</code>	tutorial material for LaTeX programming
<code>tut-plaintex</code>	tutorial material for Plain TeX
<code>tutorial</code>	tutorial material (general)
<code>typeset-grid</code>	typeset, snapping lines of text to a grid
<code>typeset-std</code>	typeset documents about standards, or the standards themselves
<code>typeset-tool</code>	tools supporting or evaluating typesetting,
<code>typesetting</code>	support for variations of typographic style
<code>typo-archaic</code>	typography to match ancient practices
<code>ukrainian</code>	documentation in, and support for typesetting Ukrainian

A Used topics, short explanations

<code>uml</code>	support for Universal Modelling Language diagrams
<code>underline</code>	underlining/overlining text (including other decorations)
<code>unicode</code>	Unicode, material supporting it, and packages requiring it
<code>units</code>	uniform typesetting of units
<code>urdu</code>	support for typesetting Urdu
<code>use-lua</code>	package requires availability of lua
<code>use-luatex</code>	package will use LuaTeX facilities if available
<code>use-sample</code>	sample of use of macro collections, etc.
<code>use-xetex</code>	package will use XeTeX facilities if available
<code>utf8-adapt</code>	adaptation of existing packages to UTF-8 input
<code>verbatim</code>	verbatim typesetting, etc.
<code>verse</code>	typeset verse, etc.
<code>version-control</code>	version control details
<code>vietnamese</code>	support for typesetting of Vietnamese
<code>vietnamese-doc</code>	documentation in Vietnamese
<code>view-app</code>	application for viewing documents
<code>view-doc</code>	application for viewing documentation
<code>visual-supp</code>	support for typesetting with low-vision readers in mind
<code>watermark</code>	separate printing, under (or over) the page as a whole
<code>welsh</code>	support for typesetting Welsh
<code>word-count</code>	count the ‘words’ in a document
<code>word-proc</code>	dealing with word processors
<code>xetex</code>	XeTeX, material supporting it, and packages requiring it
<code>bibtex-sty</code>	bibtex-sty(unknown)
<code>expl3</code>	expl3(unknown)
<code>latex-doc</code>	latex-doc(unknown)
<code>litprog-tools</code>	litprog-tools(unknown)

B Used topics and related packages

Note: The numbers do not refer to page numbers, but to section numbers. A click on this number leads to the corresponding package description.

abbrev	6 packages: abbr (11); abbrevs (12); dimnum (1615); langnames (3248); spacingtricks (5619); suppose (5753);
abstract	2 packages: abstr-collect (23); abstract (24);
accessible	8 packages: accessibility (32); accsupp (34); atkinson (321); axessibility (365); glossaries-accsupp (2543); hamnosys (2683); latex2nemeth (3311); tagpdf (5840);
acrobat	7 packages: acrotex-js (53); aeb-mlink (87); aeb-pro (89); aebxmp (94); datepicker-pro (1491); eq-pin2corr (1962); javascripthttp (3048);
acronym	8 packages: acro (43); acromake (45); acronym (47); acronym209 (48); acroterm (51); glossaries (2542); glossaries-extra (2548); hep-acronym (2721);
