

The CTAN book – Packages on CTAN

Collected, prepared and selected with the aid of the program CTANOut . py

Developers and contributors for T_EX, L^AT_EX, & Co

April 29, 2026

Parameters and statistics

program name	CTANOut . py
program version	3.0.7 (2026-04-01)
program author	Günter Partosch
program date	2026-04-01
date of program execution	2026-04-29
time of program execution	19:51:54
mode	LaTeX
special lists used ¹	True
skipped CTAN fields	[] (no fields skipped = default)
template for package names	^ . + \$ (all packages = default)
template for topics	^ . + \$ (all topics = default)
template for author names	^ . + \$ (all authors = default)
template for licenses	^ . + \$ (all licenses = default)
template for years	^ 19 [89] [0 - 9] 20 [012] [0 - 9] \$ (all years = default)
number of authors, total on CTAN	3161
number of authors, cited here	3081
number of packages, total on CTAN	6939
number of packages, processed locally	6939
number of topics, total on CTAN	614
number of topics, used here	613
number of licenses, total on CTAN	70
number of licenses, used here	56

¹special lists: topics|licenses and their explanations – topics|authors|licenses and related packages(cross-reference lists)

1 a0poster – Support for designing posters on large paper

Web page on CTAN <https://ctan.org/pkg/a0poster>

name	a0poster
caption	Support for designing posters on large paper
author	Kettl, Gerlinde
author	Weiser, Matthias
copyright	Gerlinde Kettl and Matthias Weiser (1997-2004)
license	lppl = The LaTeX Project Public License (free)
version	1.22b
description	(no language specified) Provides fonts in sizes of 12pt up to 107pt and also makes sure that in math formulas the symbols appear in the right size. Can also create a PostScript header file for dvips which ensures that the poster will be printed in the right size. Supported sizes are DIN A0, DIN A1, DIN A2 and DIN A3.
documentation	<i>Package documentation (German):</i> https://ctan.org/tex-archive/macros/latex/contrib/a0poster/a0.pdf
– local file	./5541619876-a0.pdf
documentation	<i>Package documentation (English):</i> https://ctan.org/tex-archive/macros/latex/contrib/a0poster/a0_eng.pdf
– local file	./9020786711-a0_eng.pdf
on CTAN	https://ctan.org/tex-archive/macros/latex/contrib/a0poster
on MikTeX	a0poster
on T _E XLive	a0poster
keyword	poster (typeset posters, etc.)
see also	see section 5335 on page 4831: (sciposter – Make posters of ISO A3 size and larger)
language(s)	German; English
year	2004
last access	2025-02-12

2 a2ac – AFM to AFM plus Composites

Web page on CTAN <https://ctan.org/pkg/a2ac>

name	a2ac
caption	AFM to AFM plus Composites
author	Olšák, Petr
license	other-nonfree = License that prevents distribution (not free)
version	2
description	(no language specified) Enables the use of PostScript fonts while typesetting texts in languages where inflected letters are used. The font will typically not contain the complete alphabet of a given language; the program will derive composite glyph structures using accent glyphs, and output their details in the derived AFM file. The configuration files of the program are independent of the PostScript font encoding and of the typesetting system encoding. The program may be used to prepare a font for any typesetting system, especially TeX.
documentation	<i>Package documentation (English):</i> https://ctan.org/tex-archive/fonts/utilities/a2ac/a2ac-eng.txt
documentation	(no language specified) <i>Readme:</i> https://ctan.org/tex-archive/fonts/utilities/a2ac/README
documentation	<i>Package documentation (Czech):</i> https://ctan.org/tex-archive/fonts/utilities/a2ac/a2ac-cz.txt
on CTAN	https://ctan.org/tex-archive/fonts/utilities/a2ac
keyword	font-proc (process fonts for use with TeX (includes installation))
see also	see section 33 on page 32: (<i>accfonts</i> – Utilities to derive new fonts from existing ones)
language(s)	Czech; English
year	without year
last access	2025-02-12

3 *a2ping* – Advanced PS, PDF, EPS converter

Web page on CTAN <https://ctan.org/pkg/a2ping>

name	a2ping
caption	Advanced PS, PDF, EPS converter
author	Szabó, Péter
license	gpl = GNU General Public License (free)
version	2.84p (2019-11-17)
last changes	2019-11-17
year	2019
description	(no language specified) a2ping is a Perl script command line utility written for Unix that converts many raster image and vector graphics formats to EPS or PDF and other page description formats. Accepted input file formats are: PS (PostScript), EPS, PDF, PNG, JPEG, TIFF, PNM, BMP, GIF, LBM, XPM, PCX, TGA. Accepted output formats are: EPS, PCL5, PDF, PDF1, PBM, PGM, PPM, PS, markedEPS, markedPS, PNG, XWD, BMP, TIFF, JPEG, GIF, XPM. a2ping delegates the low-level work to Ghostscript (GS), pdftops and sam2p . a2ping fixes many glitches during the EPS to EPS conversion, so its output is often more compatible and better embeddable than its input.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/graphics/a2ping/README.txt
contact	<i>repository</i> : https://github.com/pts/a2ping
on CTAN	https://ctan.org/tex-archive/graphics/a2ping
on MikTeX	a2ping
on TeXLive	a2ping
keyword	graphics-prep (prepare graphics for use with *TeX)
language(s)	no language specified
last access	2025-02-12

4 a4 – Support for A4 paper sizes

Web page on CTAN <https://ctan.org/pkg/a4>

name	a4
caption	Support for A4 paper sizes
author	Poppelier, Nico
author	Braams, Johannes L.
license	lppl = The LaTeX Project Public License (free)
version	1.2g
description	(no language specified) Provides support for A4 paper sizes, superseding a LaTeX 2.09 package of the same name (the package was developed from a now-extinct package called a4dutch). The package is mostly superseded by the <code>a4paper</code> option of LaTeX itself and by the <code>geometry</code> package. Its margins are slightly narrower than those of the <code>a4paper</code> option (there are those that claim this is a typographically poor choice), but it also has a <code>widemargins</code> option. The package is now distributed as part of the <code>ntgclass</code> bundle.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/ntgclass/a4.pdf
– local file	<code>./7847880164-a4.pdf</code>
documentation	(no language specified) <i>Bundle readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/ntgclass/README
on CTAN	https://ctan.org/tex-archive/macros/latex/contrib/ntgclass
on MikTeX	<code>ntgclass</code>
on T _E XLive	<code>ntgclass</code>
keyword	<code>geometry</code> (change geometry of page layout)
see also	see section 5 on page 6: (<code>a4wide</code> – “Wide” a4 layout)
see also	see section 2482 on page 2245: (<code>geometry</code> – Flexible and complete interface to document dimensions)
language(s)	no language specified
year	without year
last access	2025-02-12

5 a4wide – “Wide” a4 layout

Web page on CTAN <https://ctan.org/pkg/a4wide>

name	a4wide
caption	“Wide” a4 layout
author	Lamy, Jean-François
author	Holt, Alexander
license	lpl1 = The LaTeX Project Public License 1 (free)
version	(2011-01-04)
last changes	2011-01-04
year	2011
description	(no language specified) This package increases the width of the typeset area of an a4 page. This sort of operation is capable of producing typographically poor results; the operation itself is better provided by the geometry package. The package uses the a4 package.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/a4wide/a4wide.pdf
– local file	./5346925554-a4wide.pdf
on CTAN	https://ctan.org/tex-archive/macros/latex/contrib/a4wide
on MikTeX	a4wide
on T _E XLive	a4wide
keyword	geometry (change geometry of page layout)
language(s)	no language specified
last access	2025-02-12

6 a5comb – Support for a5 paper sizes

Web page on CTAN <https://ctan.org/pkg/a5comb>

name	a5comb
caption	Support for a5 paper sizes
author	Wolczko, Mario
license	pd = Public Domain Software (free)
version	4

description	(no language specified) Superseded by geometry .
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/a5comb/a5comb.pdf
– local file	<code>./4946025168-a5comb.pdf</code>
on CTAN	https://ctan.org/tex-archive/macros/latex/contrib/a5comb
on MikTeX	<code>a5comb</code>
on TeXLive	<code>a5comb</code>
keyword	<code>geometry</code> (change geometry of page layout)
language(s)	no language specified
year	without year
last access	2025-08-30

7 *aaai* – AAI style

Web page on CTAN	https://ctan.org/pkg/aaai
name	<code>aaai</code>
caption	AAAI style
author	Patel-Schneider, Peter
license	<code>noinfo</code> = <code>noinfo</code>
version	(1988-04-05)
last changes	1988-04-05
year	1988
description	(no language specified) LaTeX 2.09 conference style for AAAI-88. (The package does not work with current LaTeX, and the style it implements is not that which the AAAI seems now to favour.)
on CTAN	https://ctan.org/tex-archive/obsolete/macros/latex209/contrib/aaai
keyword	<code>confproc</code> (typesetting conference proceedings)
see also	see section 8 on page 8: (<code>aaai-named</code> – BibTeX style for AAAI)
language(s)	no language specified
last access	2025-02-12

8 *aaai-named* – BibTeX style for AAAI

Web page on CTAN <https://ctan.org/pkg/aaai-named>

name	aaai-named
caption	BibTeX style for AAAI
author	Patel-Schneider, Peter
copyright	Peter F. Patel-Schneider (1988)
license	other-free = Free license not otherwise listed (free)
description	(no language specified) A BibTeX style derived from the standard master, presumably for use with the aaai package.
on CTAN	https://ctan.org/tex-archive/biblio/bibtex/contrib/misc/aaai-named.bst
on MikTeX	beebe
on T _E XLive	beebe
keyword	bibtex-sty (bibtex-sty(unknown))
language(s)	no language specified
year	1988
last access	2025-02-19

9 *aalok* – LaTeX class file for the Marathi journal ‘Aalok’

Web page on CTAN <https://ctan.org/pkg/aalok>

name	Aalok
caption	LaTeX class file for the Marathi journal ‘Aalok’
author	निरंजन
copyright	निरंजन (2021)
license	fdl = Free Documentation License (free)
license	gpl3+ = GNU General Public License, version 3 or newer (free)
license	other-free = Free license not otherwise listed (free)
version	0.6 (2021-12-16)
last changes	2021-12-16
year	2021

10 *aastex* – Macros for Manuscript Preparation for AAS Journals

description	(no language specified) आलोक मराठी नियतकालिकाची अक्षरजुळणी करण्याकरिता लाटेक्-वर्ग. This package provides the class file for typesetting ‘Aalok’, a Marathi journal with LaTeX.
documentation	(Marathi) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/unicodetex/latex/aalok/aalok.pdf
– local file	<code>./2027851645-aalok.pdf</code>
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/unicodetex/latex/aalok/README.txt
home page	https://puszcza.gnu.org.ua/projects/aalok
contact	<i>support</i> : mailto:aalok-latex@gnu.org.ua
contact	<i>bugs</i> : https://puszcza.gnu.org.ua/bugs/?group=aalok
contact	<i>repository</i> : https://git.gnu.org.ua/aalok.git
on CTAN	https://ctan.org/tex-archive/macros/unicodetex/latex/aalok
on MikTeX	<code>aalok</code>
on T _E XLive	<code>aalok</code>
keyword	<code>marathi</code> (support for typesetting Marathi)
keyword	<code>expl3</code> (<code>expl3(unknown)</code>)
keyword	<code>class</code> (alternative LaTeX class(es))
keyword	<code>journalpub</code> (typesetting journals, etc)
language(s)	Marathi
last access	2025-08-30

10 *aastex* – Macros for Manuscript Preparation for AAS Journals

Web page on CTAN	https://ctan.org/pkg/aastex
name	<code>aastex</code>
caption	Macros for Manuscript Preparation for AAS Journals
author	American Astronomical Society
copyright	American Astronomical Society (2019)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	6.3.1 (2021-03-01)

11 *abbr* – Simple macros supporting abbreviations for Plain and LaTeX

last changes	2021-03-01
year	2021
description	(no language specified) The bundle provides a document class for preparing papers for American Astronomical Society publications. Authors who wish to submit papers to AAS journals are strongly urged to use this class in preference to any of the alternatives available.
documentation	(no language specified) <i>Documentation including a Guide:</i> http://journals.aas.org/authors/aastex.html
documentation	(no language specified) <i>Readme:</i> https://ctan.org/tex-archive/macros/latex/contrib/aastex/README
on CTAN	https://ctan.org/tex-archive/macros/latex/contrib/aastex
on MikTeX	aastex
on T _E XLive	aastex
keyword	journalpub (typesetting journals, etc)
keyword	astronomy (astronomy articles, astronomical charts)
keyword	class (alternative LaTeX class(es))
language(s)	no language specified
last access	2025-02-12

11 **abbr** – Simple macros supporting abbreviations for Plain and LaTeX

Web page on CTAN	https://ctan.org/pkg/abbr
name	abbr
caption	Simple macros supporting abbreviations for Plain and LaTeX
author	Thành, Hàn Thế
license	pd = Public Domain Software (free)
description	(no language specified) The package provides some simple macros to support abbreviations in Plain TeX or LaTeX. It allows writing (e.g.) <code>\<TeX></code> instead of <code>\TeX</code> , hence frees users from having to escape space after parameterless macros.
documentation	(no language specified) <i>Readme:</i> https://ctan.org/tex-archive/macros/generic/abbr/README
on CTAN	https://ctan.org/tex-archive/macros/generic/abbr
on T _E XLive	abbr
keyword	shortcut (shortcuts when typing)

keyword	abbrev (macros for defining abbreviations in documents)
language(s)	no language specified
year	without year
last access	2025-02-14

12 *abbrevs* – Text abbreviations in LaTeX

Web page on CTAN <https://ctan.org/pkg/abbrevs>

name	abbrevs
caption	Text abbreviations in LaTeX
author	Swift, Matt
copyright	Matt Swift (1995-2001)
license	lppl = The LaTeX Project Public License (free)
version	1.4
description	(no language specified) A LaTeX package defining abbreviation macros, which expand to defined text and insert following space intelligently, based on context. They can also expand to one thing the first time they are used and another thing on subsequent invocations. Thus they can be abbreviations in two senses, in the source and in the document. Also includes a facility for suffixes like 1900\BC and 6:00\PM which correctly handles following periods. The package is part of the frankenstein bundle.
documentation	(no language specified) <i>Package documentation</i>: https://ctan.org/tex-archive/macros/latex/contrib/frankenstein/abbrevs.pdf
– local file	./9146941535-abbrevs.pdf
documentation	(no language specified) <i>Bundle README</i>: https://ctan.org/tex-archive/macros/latex/contrib/frankenstein/README
on CTAN	https://ctan.org/tex-archive/macros/latex/contrib/frankenstein
on MikTeX	frankenstein
on TeXLive	frankenstein
keyword	abbrev (macros for defining abbreviations in documents)
language(s)	no language specified
year	2001
last access	2025-02-14

13 *abc* – Support ABC music notation in LaTeX

Web page on CTAN <https://ctan.org/pkg/abc>

name	abc
caption	Support ABC music notation in LaTeX
author	Gregorio, Enrico
license	lpl1.2 = The LaTeX Project Public License 1.2 (free)
version	2.0b
description	(no language specified) The <i>abc</i> package lets you include lines of music written in the ABC Plus language. The package will then employ the <code>\write18</code> facility to convert your notation to PostScript (using the established utility <code>abcm2ps</code>) and hence to the format needed for inclusion in your document.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/abc/README
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/abc/abc.pdf
– local file	<code>./5287537704-abc.pdf</code>
on CTAN	https://ctan.org/tex-archive/macros/latex/contrib/abc
installation	https://ctan.org/tex-archive/install/macros/latex/contrib/abc.tds.zip
on MikTeX	abc
on TeXLive	abc
keyword	music (typesetting music and related stuff)
keyword	foreign-import (import files in a non-TeX (or different TeX) format)
see also	see section 14 on page 13: (<code>abc2mtex</code> – Notate tunes stored in ABC notation)
language(s)	no language specified
year	without year
last access	2025-02-14

14 abc2mtex – Notate tunes stored in ABC notation

Web page on CTAN <https://ctan.org/pkg/abc2mtex>

name	abc2mtex
caption	Notate tunes stored in ABC notation
author	Walshaw, Chris
license	nosell = Do Not Sell Except by Arrangement (not free)
version	1.6.1
description	(no language specified) A package to notate tunes stored in an ascii format (abc notation, commonly used to notate traditional music). One of the most important aims of ABC notation, and perhaps one that distinguishes it from most, if not all, computer-readable musical languages is that it can be easily read by humans. The package produces files that can be processed with MusicTeX .
documentation	(no language specified) <i>Setup instructions:</i> https://ctan.org/tex-archive/support/abc2mtex/README
documentation	(no language specified) <i>User guide:</i> https://ctan.org/tex-archive/support/abc2mtex/usrguide.pdf
– local file	./6538283917-usrguide.pdf
documentation	(no language specified) <i>Outline of abc format:</i> https://ctan.org/tex-archive/support/abc2mtex/abc.txt
documentation	(no language specified) <i>Introductory links:</i> https://ctan.org/tex-archive/support/abc2mtex/INTRO.html
home page	http://abcnotation.com/
on CTAN	https://ctan.org/tex-archive/support/abc2mtex
keyword	music (typesetting music and related stuff)
keyword	foreign-import (import files in a non-TeX (or different TeX) format)
language(s)	no language specified
year	without year
last access	2025-02-14

15 *abnt* – Typesetting academic works according to ABNT rules

Web page on CTAN <https://ctan.org/pkg/abnt>

name	abnt
caption	Typesetting academic works according to ABNT rules
author	Cherem, Youssef
copyright	Youssef Cherem (2018-2020)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	(2020-06-06)
last changes	2020-06-06
year	2020
description	(no language specified) The ABNT package provides a clean and practical implementation of the ABNT rules for academic texts. Its purpose is to be as simple and user-friendly as possible.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/abnt/README.md
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/abnt/abnt-doc.pdf
– local file	./5646017898-abnt-doc.pdf
on CTAN	https://ctan.org/tex-archive/macros/latex/contrib/abnt
on MikTeX	abnt
on T _E XLive	abnt
keyword	portuguese-br (support for typesetting Brazilian Portuguese)
see also	see section 16 on page 15: (abntex2 – Typeset technical and scientific Brazilian documents based on ABNT rules)
see also	see section 614 on page 563: (biblatex-abnt – BibLaTeX style for Brazil’s ABNT rules)
language(s)	no language specified
last access	2025-02-14

16 *abntex2* – Typeset technical and scientific Brazilian documents based on ABNT rules

Web page on CTAN <https://ctan.org/pkg/abntex2>

name	abntex2
caption	Typeset technical and scientific Brazilian documents based on ABNT rules
author	Araujo, Lauro César
copyright	Abntex2 team (2012-2018)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.9.7 (2018-11-24)
last changes	2018-11-24
year	2018
description	(no language specified) The bundle provides support for typesetting technical and scientific Brazilian documents (like academic thesis, articles, reports, research project and others) based on the ABNT rules (Associação Brasileira de Normas Técnicas). It replaces the old <code>abntex</code> .
documentation	(Portuguese (Brazilia)) <i>Technical report template</i> : https://ctan.org/tex-archive/macros/latex/contrib/abntex2/doc/examples/abntex2-modelo-relatorio-tecnico.pdf

version	(2021-07-24)
last changes	2021-07-24
year	2021
description	(no language specified) The package contains the free OpenType medieval cursive font Aboensis and a style file to use it in XeLaTeX documents. The font is based on Codex Aboensis, that is a law book written in Sweden in the 1430s. Since medieval cursive is very difficult to read for modern people, the font is not suitable for use as an ordinary book font, but is intended for emulating late medieval manuscripts. The font contains two sets of initials: Lombardic and cursive to go with the basic alphabet, and there is support for writing two-colored initials and capitals. There are also a large number of abbreviation sigla that can be accessed as ligature substitutions. The style file contains macros that help to use the extended features of the font such as initials and two-colored capitals. There are also macros to help achieve even pages with consistent line spacing.

21 *absp*os – Absolute placement with coffins

Web page on CTAN <https://ctan.org/pkg/absp>

name	absp
caption	Absolute placement with coffins
author	Hetland, Magnus Lie
copyright	Magnus Lie Hetland (2021-2022)
license	mit = MIT License (free)
version	0.1 (2022-09-22)
last changes	2022-09-22
year	2022
description	(no language specified) This package lets you place contents at an absolute position, anchored at some specified part of the contents, similar to how TikZ nodes work, though without using the two-pass strategy of TikZ . It also avoids messing with the order of beamer overlays, which is what happens when one uses the textpos package with the <code>overlay</code> option. The solution used is quite straightforward, combining <i>coffins</i> (using l3coffins) with the placement mechanisms of atbegshi .

27 **academicons** – Font containing high quality icons of online academic profiles

Web page on CTAN <https://ctan.org/pkg/academicons>

name	academicons
caption	Font containing high quality icons of online academic profiles
author	Fernandes, Diogo A. B.
copyright	Diogo A. B. Fernandes (2015-2021)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
license	ofl = The SIL Open Font License (free)
version	1.9.6-2 (2025-09-20)
last changes	2025-09-20
year	2025
description	(no language specified) The <code>academicons</code> package provides access in (La)TeX to 146 high quality icons of online academic profiles included in the free "Academicons" font. This package works with both Xe(La)TeX or Lua(La)TeX by using <code>fontspec</code> to load the included font, as well as with pdf(La)TeX by loading a Type 1 converted format of the original font. The "Academicons" font was designed by James Walsh and released (see http://jpswalsh.github.io/academicons/) under the open SIL Open Font License. This package is a redistribution of the free "Academicons" font with specific bindings for (La)TeX. It is inspired and based on the <code>fontawesome</code> package. The generic <code>\aiicon</code> macro takes as mandatory argument the <code><name></code> of the desired icon. Icons can also be accessed directly by their respective macro. For example, <code>\aiicon{googlescholar}</code> yields the same result as <code>\aiGoogleScholar</code>. The full list of icons with their respective names and direct commands can be found in the manual.

last changes 2019-11-02
year 2019

description	(no language specified) The <code>accessibility</code> package is intended to create tagged, structured PDF documents from LaTeX source code. It allows to produce tagged PDF output following Adobe’s PDF-1.5 and 1.6 specifications. This package is predominantly targeted at documents produced using the KOMA-Script document classes. However, the author told us towards the end of June 2020: “Based on feedback to the ‘accessibility’ package and discussions with a few folks, I’d like to discourage people from using the package any more. It’s evident that it’s not going to work in it’s current form, and I don’t have the skills or time to update it. I know the general concept is very important, and so I’m looking at getting support from various funding agencies to employ someone to completely refactor the code in a more future-proof fashion. I’ll coordinate this with the core LaTeX Team once I have more solid ideas.”

33 accfonts – Utilities to derive new fonts from existing ones

Web page on CTAN <https://ctan.org/pkg/accfonts>

name	accfonts
caption	Utilities to derive new fonts from existing ones
author	Smith, John
copyright	John D. Smith (1997, 2008)
license	gpl = GNU General Public License (free)
version	0.25
description	(no language specified) The accfonts package contains three utilities to permit easy manipulation of fonts, in particular the creation of unusual accented characters. Mkt1font works on Adobe Type 1 fonts, vpl2vpl works on TeX virtual fonts and vpl2ovp transforms a TeX font to an Omega one. All three programs read in a font (either the font itself or a property list), together with a simple definition file containing lines such as ‘128 z acute’; they then write out a new version of the font with the requested new characters in the numerical slots specified. Great care is taken over the positioning of accents, and over the provision of kerning information for new characters; mkt1font also generates suitable “hints” to enhance quality at small sizes or poor resolutions. The programs are written in Perl.

44 *acroflex* – Create a graphing widget in a PDF file

Web page on CTAN <https://ctan.org/pkg/acroflex>

name *acroflex*

caption Create a graphing widget in a PDF file

author Story, Donald P.

copyright D. P. Story (2008-2016)

license lpl1 = The LaTeX Project Public License 1 (free)

version 1.7 (2020-08-07)

last changes 2020-08-07

year 2020

description (no language specified) The *acroflex* package is part of the **AeB Pro** family of packages. It is a package that creates a graphing screen using the **rmannot** package. The user can type in functions and graph them. A graphing screen can be populated with pre-packaged functions for the user to scrutinize and interact with. The package can graph functions of a single variable x , a pair of parametric equations that are functions of t , and a polar function of t .

The graphing screen is a rich media annotation what uses a specially developed SWF file, called the AcroFLeX Graphing widget. This package takes advantage of rich media annotations, which is a version 9 feature of Acrobat. This package requires Acrobat Pro and Distiller version 9. The user needs to use Adobe Reader 9.0 in order to obtain the graphing functionality.

This package has become obsolete as of December 2020. Since December 2020, Adobe no longer supports Flash player (SWF, FLV). This package uses a custom SWF file (*acroflex.swf*); as a result this package will no longer function in Adobe Acrobat Reader DC. The package will continue to produce PDFs as designed, but only if built using Acrobat XI (or a version Acrobat prior to December 2020) and viewed in Adobe Acrobat Reader XI (or a version of Reader prior to December 2020).

59 **actuarialsymbol** – Actuarial symbols of life contingencies and financial mathematics

Web page on CTAN <https://ctan.org/pkg/actuarialsymbol>

name	actuarialsymbol
caption	Actuarial symbols of life contingencies and financial mathematics
author	Goulet, Vincent
author	Beauchemin, David
copyright	David Beauchemin, Vincent Goulet (2017-2019)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1 (2019-06-13)
last changes	2019-06-13
year	2019
description	(no language specified) This package provides commands to compose actuarial symbols of life contingencies and financial mathematics characterized by subscripts and superscripts on both sides of a principal symbol. The package also features commands to easily and consistently position precedence numbers above or below statuses in symbols for multiple lives contracts. Since the actuarial notation can get quite involved, the package defines a number of shortcut macros to ease entry of the most common elements. Appendix A of the package documentation lists the commands to typeset a large selection of symbols of life contingencies. This package requires actuarialangle .

62 *addfont* – Easier use of fonts without LaTeX support

Web page on CTAN	https://ctan.org/pkg/addfont
name	addfont
caption	Easier use of fonts without LaTeX support
author	Jørgensen, Palle
copyright	Palle Jørgensen (2016-2021)
license	gpl3+ = GNU General Public License, version 3 or newer (free)
version	1.1 (2021-03-20)
last changes	2021-03-20
year	2021
description	(no language specified) This package is intended for use by users who know about fonts. It is a quick-fix for fonts which do not have genuine LaTeX support. It is not meant as a replacement of the LaTeX font definition files. It is meant as something more useable for LaTeX users than the <code>\newfont</code> command. With <i>addfont</i> the loaded font scales along with the usual LaTeX size selection. Using this package still requires some knowledge on how to use fonts with LaTeX.

75 *adjustbox* – Graphics package-alike macros for “general” boxes

Web page on CTAN <https://ctan.org/pkg/adjustbox>

name	<code>adjustbox</code>
caption	Graphics package-alike macros for “general” boxes
author	Scharrer, Martin
copyright	Martin Scharrer (2011-2025)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.3c (2025-02-26)
last changes	2025-02-26
year	2025
description	(no language specified) The package provides several macros to adjust boxed content. One purpose is to supplement the standard graphics package, which defines the macros <code>\resizebox</code>, <code>\scalebox</code> and <code>\rotatebox</code>, with the macros <code>\trimbox</code> and <code>\clipbox</code>. The main feature is the general <code>\adjustbox</code> macro which extends the “key=value” interface of <code>\includegraphics</code> from the graphics package and applies it to general text content. Additional provided box macros are <code>\lapbox</code>, <code>\marginbox</code>, <code>\minsizebox</code>, <code>\maxsizebox</code> and <code>\phantombox</code>. All macros use the collectbox package to read the content as a box and not as a macro argument. This allows for all forms of content including special material like verbatim content. A special feature of collectbox is used to provide matching environments with the identical names as the macros.

80 *adrconv* – BibTeX styles to implement an address database

Web page on CTAN <https://ctan.org/pkg/adrconv>

name	adrconv
caption	BibTeX styles to implement an address database
author	Kielhorn, Axel
copyright	Axel Kielhorn (2006, 2010, 2018)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.4
description	(no language specified) The bundle provides a collection of BibTeX style files to turn an address database stored in the <code>.bib</code> format into files suitable for printing as address books or included into letter classes like akletter or scrletter2 . The data may be sorted either by name or birthday and output provides files in various formats for address books or time planners.

85 *ae* – Virtual fonts for T1 encoded CMR-fonts

Web page on CTAN <https://ctan.org/pkg/ae>

name	<code>ae</code>
caption	Virtual fonts for T1 encoded CMR-fonts
author	Engelbrechtsen, Lars
license	lppl = The LaTeX Project Public License (free)
version	1.4
description	(no language specified) A set of virtual fonts which emulates T1 coded fonts using the standard CM fonts. The package name, AE fonts, supposedly stands for "Almost European". The main use of the package was to produce PDF files using Adobe Type 1 versions of the CM fonts instead of bitmapped EC fonts. Note that direct substitutes for the bitmapped EC fonts are now available, via the CM-super, Latin Modern and (in a restricted way) CM-LGC font sets.
documentation	(no language specified) <i>Readme</i>: https://ctan.org/tex-archive/fonts/ae/README

89 aeb-pro – Items from the AeB Pro Family of Software

Web page on CTAN <https://ctan.org/pkg/aeb-pro>

name	AeB Pro
caption	Items from the AeB Pro Family of Software
author	Story, Donald P.
copyright	D. P. Story (2006-2021)
license	lppl1.2 = The LaTeX Project Public License 1.2 (free)
version	(2021-06-20)
last changes	2021-06-20
year	2021
description	(no language specified) The AeB Pro bundle provides further functionality for the user of the AcroTeX eDucation Bundle . Except as noted in the documentation, the bundle is aimed at users of Acrobat Pro 7.0 or later and deals with using distiller to create PDF.

AeB Pro itself implements a number of features:

- AeB Central (this can be used by non-distiller users);
- Complete support for set up the initial view of the document;
- Extensive support for document actions: document level JS, set document actions (willSave, didSave, etc.) and open document actions;
- Complete support for page actions;
- Complete support for full screen mode, and all the
- current transition effects through version 8;
- Methods to easily attach documents;
- document assembly methods, methods used immediately following distillation;
- Methods for linking to attachments and launching attachments;
- Support for creating PDF Packages;
- Initializing fields using unicode; and
- Basic support for layers, rollovers and animations.

The bundle also contains ” **Robot Man** ”, a less than totally serious demo application.

95 *aecc* – Almost European Concrete Roman virtual fonts

Web page on CTAN <https://ctan.org/pkg/aecc>

name	aecc
caption	Almost European Concrete Roman virtual fonts
author	Rivera, Luis
license	lppl = The LaTeX Project Public License (free)
version	1.0
description	(no language specified) The package provides a set of virtual fonts (built from the standard Concrete fonts) providing a set of fonts that almost cover the T1 encoding. The main characters missing, of those specified in the T1 specification are eth, thorn, and the Sami letter eng. Sometimes the £ (pound sterling) character is also missing. For the typewriter fonts, the situation is <i>worse</i> . According to the author, the purpose of this package is nowadays better served by a combination of the MLTeX and ccfonts packages.
documentation	(no language specified) <i>Readme</i>: https://ctan.org/tex-archive/obsolete/fonts/aecc/README
on CTAN	https://ctan.org/tex-archive/obsolete/fonts/aecc

97 aeskwadraat – A–Eskwadraat package catalogue

Web page on CTAN <https://ctan.org/pkg/aeskwadraat>

name aeskwadraat

caption A–Eskwadraat package catalogue

author Straat, Jesse

copyright TeXniCie A-Eskwadraat (2024-2025)

license gpl3+ = GNU General Public License, version 3 or newer (free)

license cc-by-sa-4 = CC BY-SA 4.0 (free)

version 1.0.1 (2025-06-13)

last changes 2025-06-13

year 2025

description (no language specified) This is the official package catalogue of the [A–Eskwadraat association](#) .

A–Eskwadraat is the study association for mathematics and physics at Utrecht University.

The catalogue includes packages for meeting notes, a beamer theme, invoices and letters.

The beamer theme can also be used for Utrecht University-styled presentations. Do refer to the [UU website](#) for information on logo use.

98 *aesupp* – Special support for the æ character

Web page on CTAN <https://ctan.org/pkg/aesupp>

name	aesupp
caption	Special support for the æ character
author	Jørgensen, Palle
copyright	Palle Jørgensen (2021)
license	gpl3+ = GNU General Public License, version 3 or newer (free)
license	gfl = The GUST Font License (GFL) (free)
version	1 (2021-03-10)
last changes	2021-03-10
year	2021
description	(no language specified) This package provides special support for the italic ‘æ’ character in some fonts, due to design flaws (in the author’s opinion) regarding this character. At the moment only the fonts TeX Gyre Bonum , TeX Gyre Schola , TeX Gyre Pagella , and the Latin Modern fonts are supported. The other fonts in the TeX Gyre bundle do not need this support.

99 *affilauthor* – Tag author and affiliation information in a key-value style

Web page on CTAN	https://ctan.org/pkg/affilauthor
name	affilauthor
caption	Tag author and affiliation information in a key-value style
author	P., Selvam
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0.1 (2023-11-29)
last changes	2023-11-29
year	2023
description	(no language specified) This package provides key-value style author and affiliation information tagging in a structured format. Each field has a specific name similar to the bib format. We can customize the styles as per preferences for <code>article.cls</code> class layout. Instead of giving all the information (author and affiliation) in a single tag, we can split the information in a format of key-value style.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/affilauthor/README.txt

106 afterpage – Execute command after the next page break

Web page on CTAN <https://ctan.org/pkg/afterpage>

name	afterpage
caption	Execute command after the next page break
author	Carlisle, David
author	The LaTeX Project Team
copyright	The LaTeX3 Project et al. (1993-2023)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.08 (2023-07-04)
last changes	2023-07-04
year	2023
description	(no language specified) Implements a command that causes the commands specified in its argument to be expanded after the current page is output. For example, LaTeX's float positioning mechanism sometimes gets overloaded and all floating figures and table drift to the end of the document. One may flush out all the unprocessed floats by issuing a <code>\clearpage</code> command, but this has the effect of making the current page end prematurely. Now you can issue <code>\afterpage{\clearpage}</code> and the current page will be filled up with text as usual, but then the <code>\clearpage</code> command will flush out all the floats before the next text page begins. This package is part of the latex-tools bundle in the LaTeX required distribution.

111 aifont – Remap Computer Modern fonts

Web page on CTAN <https://ctan.org/pkg/aifont>

name	aifont
caption	Remap Computer Modern fonts
author	Collins, Skip
license	lppl = The LaTeX Project Public License (free)
description	(no language specified) Virtual fonts and other related files for remapping the BSR/Y&Y/AMS Type 1 Computer Modern fonts; the remapping creates fonts which have no characters in the numeric range 0–31 (mod 128), and the virtual fonts map Knuth’s original encodings to the remapped fonts. These mechanisms aid the production of robust PDF output from TeX-related systems, when they use CM fonts. The original impetus for developing this bundle came from problems with Adobe Illustrator (hence the first two letters of the bundle name). Current versions of Adobe Illustrator can apparently use the CM fonts without remapping, so the bundle is not needed for such use.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/obsolete/fonts/cm/ai/README.aifont

112 aiplans – A TikZ-based library for drawing POCL plans

Web page on CTAN <https://ctan.org/pkg/aiplans>

name	aiplans
caption	A TikZ-based library for drawing POCL plans
author	Bercher, Pascal
author	Ge, Yikai
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	3.0 (2025-03-05)

last changes	2025-03-05
year	2025
description	(no language specified) This TikZ library is designed for generating diagrams related to Automated Planning, a subdiscipline of Artificial Intelligence. It allows users to define a "domain model" for actions, similar to PDDL and HDDL used in hierarchical planning. The package is useful for researchers and students to create diagrams that represent sequential action sequences or partially ordered plans, including causal links and ordering constraints (e.g., POCL plans). It is particularly suited for presentations and scientific publications.

120 *alegreya* – Alegreya fonts with LaTeX support

Web page on CTAN <https://ctan.org/pkg/alegreya>

name *alegreya*

caption *Alegreya fonts with LaTeX support*

author Tennent, Bob

license ofl = The SIL Open Font License (free)

license lpl = The LaTeX Project Public License (free)

version (2022-09-14)

last changes 2022-09-14

year 2022

description (no language specified) The Alegreya fonts are designed by Juan Pablo del Peral for Huerta Tipográfica. Alegreya is a typeface originally intended for literature. It conveys a dynamic and varied rhythm which facilitates the reading of long texts. The italic has just as much care and attention to detail in the design as the roman. Bold, black, small caps and five number styles are available.

125 **algbobx** – Typeset Algbobx programs

Web page on CTAN <https://ctan.org/pkg/algbobx>

name	algbobx
caption	Typeset Algbobx programs
author	Rivaud, Julien
copyright	RIVAUD Julien (2016-2019)
license	gpl3+ = GNU General Public License, version 3 or newer (free)

version	1.3 (2019-09-29)
last changes	2019-09-29
year	2019
description	(no language specified) This LaTeX package can typeset Algobox programs almost exactly as displayed when editing with Algobox itself, using an input syntax very similar to the actual Algobox program text. It gives better results than Algobox’s own LaTeX export which does not look like the editor rendition, produces standalone documents cumbersome to customize, and has arbitrary and inconsistent differences between the input syntax and the program text. This package depends upon the following other LaTeX packages: expl3 , TikZ , environ , xparse , and xcolor .

127 algorithm2e – Floating algorithm environment with algorithmic keywords

Web page on CTAN <https://ctan.org/pkg/algorithm2e>

name	algorithm2e
caption	Floating algorithm environment with algorithmic keywords
author	Kokan, Ivan
author	Fiorio, Christophe
license	lppl = The LaTeX Project Public License (free)
version	5.2
description	(no language specified) Algorithm2e is an environment for writing algorithms. An algorithm becomes a floating object (like figure, table, etc.). The package provides macros that allow you to create different keywords, and a set of predefined key words is provided; you can change the typography of the keywords. The package allows vertical lines delimiting a block of instructions in an algorithm, and defines different sorts of algorithms such as Procedure or Function; the name of these functions may be reused in the text or in other algorithms.

130 *algpseudocodex* – Package for typesetting pseudocode

Web page on CTAN <https://ctan.org/pkg/algpseudocodex>

name	algpseudocodex
caption	Package for typesetting pseudocode
author	Matt, Christian
copyright	Christian Matt (2017, 2020-2023)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1.2 (2023-04-17)
last changes	2023-04-17
year	2023
description	(no language specified) This package allows typesetting pseudocode in LaTeX. It is based on <i>algpseudocode</i> from the <i>algorithmicx</i> package and uses the same syntax, but adds several new features and improvements. Notable features include customizable indent guide lines and the ability to draw boxes around parts of the code for highlighting differences. This package also has better support for long code lines spanning several lines and improved comments.

description	(no language specified) A version of <code>alltt</code> (an old version from LaTeX 2.09, now obsolete), patched to apply a left margin (of the user’s choice) to the verbatim text. A similar patch could be created for current <code>alltt</code> , but it seems that no-one has felt the need.

139 almendra – Almendra fonts with LaTeX support

Web page on CTAN <https://ctan.org/pkg/almendra>

name almendra

caption Almendra fonts with LaTeX support

author Tennent, Bob

license ofl = The SIL Open Font License (free)

license lppl = The LaTeX Project Public License (free)

version (2022-09-28)

last changes 2022-09-28

year 2022

description (no language specified) This package provides LaTeX, pdfLaTeX, XeLaTeX, and LuaLaTeX support for the Almendra family of fonts, designed by Ana Sanfelippo. Almendra is a typeface design based on calligraphy. Its style is related to the chancery and gothic hands. There are regular and bold weights with matching italics. There is also a regular-weight small-caps.

140 ***almfixed* – Arabic-Latin Modern Fixed extends TeX-Gyre Latin Modern Mono 10 Regular to full Arabic Unicode support**

Web page on CTAN <https://ctan.org/pkg/almfixed>

name	<code>almfixed</code>
caption	Arabic-Latin Modern Fixed extends TeX-Gyre Latin Modern Mono 10 Regular to full Arabic Unicode support
author	Hamid, Idris Samawi
license	gfl = The GUST Font License (GFL) (free)
version	0.92
description	(no language specified) Arabic-Latin Modern Fixed is an extension of TeX-Gyre Latin Modern Mono 10 Regular. Every glyph and OpenType feature of the Latin Modern Mono has been retained, with minor improvements. On the other hand, we have changed the vertical metrics of the font. Although the Arabic script is designed to use the same x-size as Latin Modern Mono, the former script needs greater ascender and descender space. Every Arabic glyph in each Unicode-code block is supported (up to Unicode 7.0): Arabic, Arabic Supplement, Arabic Extended, Arabic Presentation-Forms A, and Arabic Presentation-Forms B. There are two versions of the font: <code>otf</code> and <code>ttf</code>. The <code>?penType</code> version is for print applications (and usually the default for TeX). The TrueType version is for on-screen applications such as text editors. Hinting in the <code>ttf</code> version is much better for on-screen, at least on Microsoft Windows. The unique feature of Arabic-Latin Modern is its treatment of vowels and diacritics. Each vowel and diacritic (ALM Fixed contains a total of 68 such glyphs) may now be edited horizontally within any text editor or processor. The author believes this is the very first OpenType Arabic font ever to have this

capability. Editing complex Arabic texts will now be much easier to input and to proofread.

167 amscdx – Enhanced commutative diagrams

Web page on CTAN <https://ctan.org/pkg/amscdx>

name	amscdx
caption	Enhanced commutative diagrams
author	Vermeer, Martin
copyright	Martin Vermeer (2019)
copyright	American Mathematical Society (1995, 1999)
copyright	LaTeX3 Project and American Mathematical Society (2016-2017)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.2x (2019-07-02)
last changes	2019-07-02
year	2019
description	(no language specified) The original amscd package provides a CD environment that emulates the commutative diagram capabilities of AMS-TeX version 2.x. This means that only simple rectangular diagrams are supported, with no diagonal arrows or more exotic features. This enhancement package implements double (“fat”), dashed, and bidirectional arrows (left-right and up-down), and color attributes for arrows and their annotations. The restriction to rectangular geometry remains. This nevertheless allows the drawing of a much broader class of “commutative-diagram-like” diagrams. This update, 2.2x of 2019-07-02, fixes the dashed-arrows parts placement bug, and adds the package option ‘lyx’, for use with lyx to prevent conflict with the already loaded amscd. The packages xcolor and graphicx are made required.

version	(2017-09-01)
last changes	2017-09-01
year	2017
description	(no language specified) This collection comprises a set of four manuals, or Author Handbooks, each documenting the use of a class of publications based on one of the AMS document classes <code>amsart</code>, <code>amsbook</code>, <code>amsproc</code> and one "hybrid", as well as a guide to the generation of the four manuals from a coordinated set of LaTeX source files. The Handbooks comprise the user documentation for the pertinent document classes. As the source for the Handbooks consists of a large number of files, and the intended output is multiple different documents, the principles underlying this collection can be used as a model for similar projects. The manual "Compiling the AMS Author Handbooks" provides information about the structure of and interaction between the various components.

170 amsfonts – TeX fonts from the American Mathematical Society

Web page on CTAN <https://ctan.org/pkg/amsmaths>

name	amsmaths
caption	TeX fonts from the American Mathematical Society
author	The American Mathematical Society
license	ofl = The SIL Open Font License (free)
version	3.04
description	(no language specified) An extended set of fonts for use in mathematics, including: extra mathematical symbols; blackboard bold letters (uppercase only); fraktur letters; subscript sizes of bold math italic and bold Greek letters; subscript sizes of large symbols such as sum and product; added sizes of the Computer Modern small caps font; cyrillic fonts (from the University of Washington); Euler mathematical fonts. All fonts are provided as Adobe Type 1 files, and all except the Euler fonts are provided as Metafont source. The distribution also includes the canonical Type 1 versions of the Computer Modern family of fonts. Basic LaTeX support for the symbol fonts is provided by <code>amsmaths.sty</code>, with names of individual symbols defined in <code>amssymb.sty</code>. The Euler fonts are supported by separate packages; details can be found in the documentation.

175 `amsmath` – AMS mathematical facilities for LaTeX

Web page on CTAN <https://ctan.org/pkg/amsmath>

name	<code>amsmath</code>
caption	AMS mathematical facilities for LaTeX
author	The LaTeX Project Team
copyright	LaTeX3 Project and American Mathematical Society (2016-2023)
copyright	American Mathematical Society (1995, 2000, 2013)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.17t (2024-11-05)
last changes	2024-11-05
year	2024

description	(no language specified) The principal package in the AMS-LaTeX distribution. It adapts for use in LaTeX most of the mathematical features found in AMS-TeX; it is highly recommended as an adjunct to serious mathematical typesetting in LaTeX. When amsmath is loaded, AMS-LaTeX packages ambsy (for bold symbols), amsopn (for operator names) and amstext (for text embedded in mathematics) are also loaded. amsmath is part of the LaTeX required distribution; however, several contributed packages add still further to its appeal; examples are empheq, which provides functions for decorating and highlighting mathematics, and ntheorem, for specifying theorem (and similar) definitions.

version 2.01 (2021-08-26)

last changes 2021-08-26

year 2021

description (no language specified) AMS-TeX is a TeX macro package, originally written by Michael Spivak for the American Mathematical Society (AMS) during 1983–1985 and is described in the book ‘*The Joy of TeX*’. It is based on Plain TeX, and provides many features for producing more professional-looking maths formulas with less burden on authors.

This is the final archival distribution of AMS-TeX. AMS-TeX is no longer supported by the AMS, nor is it used by the AMS publishing program. The AMS does not recommend creating any new documents using AMS-TeX; this distribution will be left on CTAN to facilitate processing of legacy documents and as a historical record of a pioneering TeX macro collection that played a key role in popularizing TeX and revolutionizing mathematics publishing.

In addition to the “*User’s Guide to AMS-TeX*”, the AMS has also made the full text of the most recent reprint of the second edition of “*The Joy of TeX*” by Michael Spivak available as a pdf file.

AMS-TeX is the historical basis of *amslatex*, which should now be used to prepare submissions for the AMS.

189 *anima* – Create slideshows with simple animations

Web page on CTAN <https://ctan.org/pkg/anima>

name	<i>anima</i>
caption	Create slideshows with simple animations
author	Gomes de Santana, Adriano
copyright	Adriano Gomes de Santana (2009-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1 (2024-12-14)
last changes	2024-12-14
year	2024
description	(no language specified) The idea for this package arose from noticing that including the <code>\pause</code> command from the <i>beamer</i> class within the <code>\foreach</code> loop command from the <i>TikZ</i> package creates a sequence of frames, where each slide presents a step in the construction of the image. The purpose of the <i>anima</i> class is to provide macros that simplify the use of this effect for creating animated slide presentations. Although the functionality of this class can be compared to the transition effects of the <i>beamer</i> class, it is not a dependency of the <i>anima</i> class. However, the class makes extensive use of the image creation language provided by the <i>TikZ</i> package. Lastly, it is worth noting a comparison between this class and the <i>animate</i> package. The <i>animate</i> package can create embedded animations within the document, while the <i>anima</i> class produces an animation where each frame corresponds to a page of the document. This distinction highlights the different design goals of the <i>anima</i> class.

199 anonymous-acm – Typeset anonymous versions for ACM articles

Web page on CTAN <https://ctan.org/pkg/anonymous-acm>

name	anonymous-acm
caption	Typeset anonymous versions for ACM articles
author	Becker, Brett A.
copyright	Brett A. Becker (2020)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)

version	1.0 (2020-05-09)
last changes	2020-05-09
year	2020
description	(no language specified) Academics often need to submit anonymous versions of their papers for peer-review. This often requires anonymization which at some future date needs to be reversed. However de-anonymizing an anonymized paper can be laborious and error-prone. This LaTeX package allows anonymization options to be specified at the time of writing for authors using <code>acmart.cls</code>, the official Association of Computing Machinery (ACM) master article template. Anonymization or deanonymization is carried out by simply changing one option and recompiling.
documentation	(no language specified) <i>Package documentation</i>: https://ctan.org/tex-archive/macros/latex/contrib/anonymous-acm/anonymous-acm.pdf

213 anyfontsize – Select any font size in LaTeX

Web page on CTAN <https://ctan.org/pkg/anyfontsize>

name	anyfontsize
caption	Select any font size in LaTeX
author	Szabó, Péter
license	lppl = The LaTeX Project Public License (free)
version	(2007-11-22)
last changes	2007-11-22
year	2007
description	(no language specified) The package allows the to user select any font size (via e.g. <code>\fontsize{...}{...}\selectfont</code>), even those sizes that are not listed in the <code>.fd</code> file. If such a size is requested, LaTeX will search for and select the nearest listed size; <code>anyfontsize</code> will then scale the font to the size actually requested. Similar functionality is available for the CM family, for the EC family, or for either computer modern encoding; the present package generalises the facility.

215 *aobs-tikz* – TikZ styles for creating overlaid pictures in beamer

Web page on CTAN <https://ctan.org/pkg/aobs-tikz>

name	<code>aobs-tikz</code>
caption	TikZ styles for creating overlaid pictures in beamer
author	Fiandrino, Claudio
copyright	Claudio Fiandrino (2014-2024)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.01 (2024-04-15)
last changes	2024-04-15

year	2024
description	(no language specified) The package defines auxiliary TikZ styles useful for overlaying pictures' elements in Beamer . The TikZ styles are grouped in a library, <code>overlay-beamer-styles</code> which is automatically called by the package itself. Users may either load just <code>aobs-tikz</code> or the library; the latter method necessitates TikZ manual load.

231 *apnum* – Arbitrary precision numbers implemented by TeX macros

Web page on CTAN <https://ctan.org/pkg/apnum>

name	apnum
caption	Arbitrary precision numbers implemented by TeX macros
author	Olšák, Petr
license	pd = Public Domain Software (free)
version	1.7
description	(no language specified) The basic operations (addition, subtraction, multiplication, division, power to an integer) are implemented by TeX macros in this package. Operands may be numbers with arbitrary numbers of digits; scientific notation is allowed. The expression scanner is also provided. As of version 1.4 (December 2015) the calculation of common functions (sqrt, exp, ln, sin, cos, tan, asin, acos, atan, pi) with arbitrary precision in the result has been added. Exhaustive documentation (including detailed TeXnical documentation) is included. The macro includes many optimizations and uses only TeX primitives (from classic TeX) and <code>\newcount</code> macro.

description	(no language specified) This book explains the basic concepts required for programming in TeX and explains the programming methods, providing many examples. The package makes the compileable source code as well as the compiled pdf file accessible to everyone. Ce livre expose les concepts de base requis pour programmer en TeX et décrit les méthodes de programmation en s'appuyant sur de nombreux exemples. Ce package met à disposition de tous le code source compilable ainsi que le fichier pdf du livre.

version	1.3.0 (2026-04-14)

last changes	2026-04-14
year	2026
description	(no language specified) The package makes it easier to write articles where proofs and other material are deferred to the appendix. The appendix material is written in the LaTeX code along with the main text which it naturally complements, and it is automatically deferred. The package can automatically send proofs to the appendix, can repeat in the appendix the theorem environments stated in the main text, can section the appendix automatically based on the sectioning of the main text, and supports a separate bibliography for the appendix material. It depends on the following other packages: amsthm , bibunits (if the bibliography option is set to <code>separate</code>), environ , etoolbox , fancyvrb , ifthen , and kvoptions .

240 arabi – (La)TeX support for Arabic and Farsi, compliant with Babel

Web page on CTAN <https://ctan.org/pkg/arabi>

name	arabi
caption	(La)TeX support for Arabic and Farsi, compliant with Babel
author	Jabri, Youssef
copyright	Youssef Jabri (2006)
license	lppl = The LaTeX Project Public License (free)

version	1.1
description	(no language specified) The package provides an Arabic and Farsi script support for TeX without the need of any external pre-processor, and in a way that is compatible with babel. The bi-directional capability supposes that the user has a TeX engine that knows the four primitives <code>\beginR</code>, <code>\endR</code>, <code>\beginL</code> and <code>\endL</code>. That is the case in both the TeX–XeT and e-TeX engines. Arabi will accept input in several 8-bit encodings, including UTF-8. Arabi can make use of a wide variety of Arabic and Farsi fonts, and provides one of its own. PDF files generated using Arabi may be searched, and text may be copied from them and pasted elsewhere.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/language/arabic/arabi/README

245 *arabluatex* – ArabTeX for LuaLaTeX

Web page on CTAN	https://ctan.org/pkg/arabluatex
name	arabluatex
caption	ArabTeX for LuaLaTeX
author	Alessi, Robert
copyright	Robert Alessi (2016-2020)
license	gpl3+ = GNU General Public License, version 3 or newer (free)
license	cc-by-sa-4 = CC BY-SA 4.0 (free)
version	1.20 (2020-03-23)
last changes	2020-03-23
year	2020

description	(no language specified) This package provides for LuaLaTeX an ArabTeX-like interface to generate Arabic writing from an ascii transliteration. It is particularly well-suited for complex documents such as technical documents or critical editions where a lot of left-to-right commands intertwine with Arabic writing. arabluatex is able to process any ArabTeX input notation. Its output can be set in the same modes of vocalization as ArabTeX, or in different roman transliterations. It further allows many typographical refinements. It will eventually interact with some other packages yet to come to produce from .tex source files, in addition to printed books, TEI xml compliant critical editions and/or lexicons that can be searched, analyzed and correlated in various ways.

version	1.2.1
description	(no language specified) ArabXeTeX provides a convenient ArabTeX-like user-interface for typesetting languages using the Arabic script in XeLaTeX, with flexible access to font features. Input in ArabTeX notation can be set in three different vocalization modes or in roman transliteration. Direct UTF-8 input is also supported. The parsing and converting of ArabTeX input to Unicode is done by means of TECKit mappings. Version 1.0 provides support for Arabic, Maghribi Arabic, Farsi (Persian), Urdu, Sindhi, Kashmiri, Ottoman Turkish, Kurdish, Jawi (Malay) and Uighur. The documentation covers topics such as typesetting the Holy Quran and typesetting bidirectional critical editions with the package ednotes.

253 archaic – A collection of archaic fonts

Web page on CTAN	https://ctan.org/pkg/archaic
name	archaic
caption	A collection of archaic fonts
author	Zimmermann, Uwe
author	Syropoulos, Apostolos
author	Wilson, Peter R.
license	lppl = The LaTeX Project Public License (free)
description	(no language specified) The collection contains fonts to represent Aramaic , Cypriot , Etruscan , Greek of the 6th and 4th centuries BCE, Egyptian hieroglyphics , Linear A , Linear B , Nabatean old Persian , the Phaistos disc , Phoenician , proto-Semitic , runic , South Arabian Ugaritic and Viking scripts. The bundle also includes a small font for use in phonetic transcription of the archaic writings. The bundle's own directory includes a font installation map file for the whole collection.

256 *arev* – Fonts and LaTeX support files for Arev Sans

Web page on CTAN <https://ctan.org/pkg/arev>

name	arev
caption	Fonts and LaTeX support files for Arev Sans
author	Hartke, Stephen
license	lppl = The LaTeX Project Public License (free)
description	(no language specified) The package <i>arev</i> provides type 1 and virtual fonts, together with LaTeX packages for using Arev Sans in both text and mathematics. Arev Sans is a derivative of Bitstream Vera Sans created by Tavmjong Bah, adding support for Greek and Cyrillic characters. Bah also added a few variant letters that are more appropriate for mathematics. The primary purpose for using Arev Sans in LaTeX is presentations, particularly when using a computer projector. In such a context, Arev Sans is quite readable, with large x-height, "open letters", wide spacing, and thick stems. The style is very similar to the SliTeX font <i>lcmss</i>, but heavier. Arev is one of a very small number of sans-font mathematics support packages. Others are cmbright, hvmath and kerkis.

260 armtex – A system for writing in Armenian with TeX and LaTeX

Web page on CTAN <https://ctan.org/pkg/armtex>

name	armtex
caption	A system for writing in Armenian with TeX and LaTeX
author	Dalalyan, Arnak
author	Akopian, Vardan
author	Dachian, Serguei

copyright	Serguei Dachian, Arnak Dalalyan, Vardan Akopian (1997-2024)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	3.0-beta5 (2024-01-13)
last changes	2024-01-13
year	2024
description	(no language specified) ArmTeX is a system for typesetting Armenian text with Plain TeX or LaTeX(2ϵ). It may be used with input: • from a standard Latin keyboard without any special encoding and/or support for Armenian letters, • from any keyboard which uses an encoding that has Armenian letters in the second half (characters 128-255) of the extended ASCII table (for example ArmSCII8 Armenian standard), • from an Armenian keyboard using UTF-8 encoding. Users should note that the manuals still mostly describe the previous version of the package (ArmTeX 2.0). However, a description of the new features of ArmTeX 3.0 is provided at the end of the README file.

275 *arsenal* – Open Type font by Andrij Shevchenko

Web page on CTAN <https://ctan.org/pkg/arsenal>

name *arsenal*

caption Open Type font by Andrij Shevchenko

author Veytsman, Boris

license ofl = The SIL Open Font License (free)

license lpl1.3c = The LaTeX Project Public License 1.3c (free)

version 1.1 (2025-12-13)

last changes 2025-12-13

year 2025

description (no language specified) In 2011 Andrij's typeface became a winner of the Ukrainian Type Design Competition "Mystetsky Arsenal" in which three main criteria were sought for: being zeitgeist, practical, and Ukrainian. Andrij's winning entry was crowned Arsenal and made publicly available.

Arsenal is a semi-grotesque with traditional forms. It is primarily designed for body text and intended for various professional communication. Its special qualities of letter shapes and subtle contrast modulation articulate grace and expressivity. Arsenal's somewhat lyrical sentiment abides to the Ukrainian nature of the font.

This package provides the fonts and LaTeX support for them with matching math. It needs LuaLaTeX or XeLaTeX.

280 artthreads – Support for article threads

Web page on CTAN <https://ctan.org/pkg/artthreads>

name	artthreads
caption	Support for article threads
author	Story, Donald P.
copyright	D. P. Story (2016-2020)
license	lpl1 = The LaTeX Project Public License 1 (free)
version	1.3.1 (2020-07-09)
last changes	2020-07-09
year	2020
description	(no language specified) This package facilitates the creation of PDF article threads, a concept/feature of Adobe Reader/Acrobat that has been around since the product's beginning. The use of article threads typically only makes sense in a document in which the text is in a multi-column format. Set the article threads after the composition of the document is completed. The method of setting the threads is very visual, not automatic as in the threadcol package of Scott Pakin (available for <code>pdftex</code> only). This package supports all drivers: dvips, <code>pdflatex</code>, <code>lualatex</code>, <code>xelatex</code>, dvipdfm, and dvipdfmx.
documentation	(no language specified) <i>Example of use:</i> https://ctan.org/tex-archive/macros/latex/contrib/artthreads/examples/article_tech.pdf

296 asmeconf – A LaTeX template for ASME conference papers

Web page on CTAN <https://ctan.org/pkg/asmeconf>

name `asmeconf`

caption A LaTeX template for ASME conference papers

author Lienhard, John H.

copyright John Lienhard (2021-2026)

license mit = MIT License (free)

version 1.46 (2026-01-10)

last changes 2026-01-10

year 2026

description (no language specified) The `asmeconf` class provides a LaTeX template for ASME conference papers, following ASME's guidelines for margins, fonts, headings, captions, and reference formats as of 2025.

This LaTeX template is intended to be used with the `asmeconf.bst` BibTeX style, for reference formatting, which is part of this distribution. Unlike older ASME conference LaTeX templates, `asmeconf` pdfs will contain hyperlinks, bookmarks, and metadata; and the references can include the DOI and URL fields. This LaTeX template enables inline author names, following ASME's current style, but it can also produce the traditional grid style. Options include line numbering, final column balancing, various math options, government copyright, archivability and accessibility (PDF/A), and multilingual support. The code is compatible with pdfLaTeX or LuaLaTeX.

This LaTeX template is not a publication of ASME, but it does conform to ASME's currently published guidelines for conference papers.

299 *aspell* – Spell checker

Web page on CTAN <https://ctan.org/pkg/aspell>

name	<code>aspell</code>
caption	Spell checker
author	Atkinson, Kevin
copyright	Kevin Atkinson (2001-2004)
license	gpl2 = GNU General Public License, version 2 (free)
version	0.60.8
description	(no language specified) GNU Aspell is a Free and Open Source spell checker designed to replace Ispell. It can either be used as a library or as an independent spell checker. Its main feature is that it does a superior job of suggesting possible replacements for a misspelled word than just about any other spell checker out there for the English language. Aspell can check documents in UTF-8 without having to use a special dictionary; and will do its best to respect the current locale setting. A wide range of language-specific dictionaries is available.

303 association-matrix – LaTeX support for creating association matrices

Web page on CTAN <https://ctan.org/pkg/association-matrix>

name `association-matrix`

caption LaTeX support for creating association matrices

author Whisperity

copyright Whisperity (2020-2022)

license lpl1.3c = The LaTeX Project Public License 1.3c (free)

version 1.1 (2022-10-29)

last changes 2022-10-29

year 2022

description (no language specified) This package allows the creation of association matrices in an clear and concise fashion, without having to deal with manually generating and modifying the tables while working. All you have to do is define the rows and the columns by their unique identifier, and then specify which cells should be marked as associated. Then, the `\amxgenerate` command generates a table that shows in the cells with a blip (•) where the association was added.

The package depends on [etoolbox](#) , [forloop](#) , [ifthen](#) , [textcomp](#) , and [xparse](#) .

314 **asypictureb** – User-friendly integration of Asymptote into LaTeX

Web page on CTAN	https://ctan.org/pkg/asypictureb
name	<code>asypictureB</code>
caption	User-friendly integration of Asymptote into LaTeX
author	Staats III, Charles
copyright	Charles Staats III (2014)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.4 (2025-01-26)
last changes	2025-01-26
year	2025
description	(no language specified) The package is an unofficial alternative to the package provided with the Asymptote distribution, for including pictures within a LaTeX source file. While it does not duplicate all the features of the official package, this package is more user-friendly in several ways. Most notably, Asymptote errors are repackaged as LaTeX errors, making debugging less of a pain. It also has a more robust mechanism for identifying unchanged pictures that need not be recompiled.

version	2.2.0 (2025-10-10)
last changes	2025-10-10
year	2025
description	(no language specified) A LaTeX package for symmetric group combinatorics, with commands for Young diagrams, tableaux, tabloids, skew tableaux, shifted tableaux, ribbon tableaux, multitableaux, abacuses. These commands are intended to be easy to use and easy to customise. In particular, TikZ styling can be added to the components of these diagrams and common conventions and idioms are supported using a key-value interface. All diagrams can be used as standalone commands or as part of <code>tikzpicture</code> environments.

319 *atenddvi* – Provides the `\AtEndDvi` command

Web page on CTAN	https://ctan.org/pkg/atenddvi
name	atenddvi
caption	Provides the <code>\AtEndDvi</code> command
author	Oberdiek, Heiko
copyright	Oberdiek Package Support Group (2016-2020)
copyright	Heiko Oberdiek (2007)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.5 (2020-11-11)
last changes	2020-11-11
year	2020

description	(no language specified) This package is unneeded and does nothing when used with a LaTeX format 2020-10-01 or newer as in this case the <i>format</i> provides the <code>\AtEndDvi</code> command. For older formats it implements <code>\AtEndDvi</code> , a counterpart to <code>\AtBeginDvi</code> . The execution of its argument is delayed to the end of the document at the end of the last page. Thus <code>\special</code> and <code>\write</code> remain effective, because they are put into the last page. This is the main difference to <code>\AtEndDocument</code> .
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/atenddvi/README.md

322 attachfile – Attach arbitrary files to a PDF document

Web page on CTAN	https://ctan.org/pkg/attachfile
name	attachfile
caption	Attach arbitrary files to a PDF document
author	Pakin, Scott
copyright	Scott Pakin (2010, 2015-2016)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.9
description	(no language specified) Starting with PDF 1.3 (Adobe Acrobat 4.0), PDF files can contain file attachments — arbitrary files that a reader can extract, just like attachments to an e-mail message. The attachfile package brings this functionality to pdfLaTeX and provides some additional features not available in Acrobat, such as the ability to use arbitrary LaTeX code for the file icon — including things like <code>\includegraphics</code> , <code>tabular</code> , and <code>mathematics</code> . Settings can be made either globally or on a per-attachment basis. Attachfile makes it easy to attach files and customize their appearance in the enclosing document.

	The package supports the Created, Modified, and Size keys in the EmbeddedFile’s Params dictionary.

332 **aur1** – Extends the hyperref package with a mechanism for hyperlinked URLs abbreviated with prefixes

Web page on CTAN <https://ctan.org/pkg/aur1>

name	aur1
caption	Extends the hyperref package with a mechanism for hyperlinked URLs abbreviated with prefixes
author	Höffner, Konrad
copyright	Konrad Höffner (2016)
license	pd = Public Domain Software (free)
version	(2016-08-12)
last changes	2016-08-12
year	2016
description	(no language specified) Semantic Web resource URLs are often abbreviated with prefixes, like "owl:Class" or "rdf:type". The abbreviated URL (aur1) package provides the correct hyperlinks for those URLs. The 1000 most common prefixes are predefined and more can be added.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/aur1/README.md
on CTAN	https://ctan.org/tex-archive/macros/latex/contrib/aur1
on T _E XLive	aur1
keyword	hyper (support for hypertext)

last access	2025-02-07

333 **aurora** – Header files for dvips to make colour separations

Web page on CTAN <https://ctan.org/pkg/aurora>

name	aurora
caption	Header files for dvips to make colour separations
author	Freeman, T. Graham
copyright	Graham Freeman (1994)
license	nocommercial = No Commercial Use (not free)

description	(no language specified) Offset printers need separate camera-ready copies for each ink they will use in printing a document. Aurora is a PostScript program for producing colour separates from a colour PostScript document. Aurora can be run from any type of computer, as it depends only on a black-and-white PostScript printer for its execution. It is capable of handling colour images as well as ordinary graphics, though image handling is very slow.

337 *authordate* – Author/date style citation styles

Web page on CTAN <https://ctan.org/pkg/authordate>

name	authordate
caption	Author/date style citation styles
author	Rhead, David
license	knuth = Knuth License (free)
version	(1992-07-20)
last changes	1992-07-20
year	1992
description	(no language specified) Authordate produces styles loosely based on the recommendations of British Standard 1629(1976), Butcher’s <i>Copy-editing</i> and the Chicago Manual of Style. The bundle provides four BibTeX styles (authordate1, ..., authordate4), and a LaTeX package, for citation in author/date style. The BibTeX styles differ in how they format names and titles; one of them is necessary for the LaTeX package to work.
documentation	(no language specified) <i>Readme file</i> : https://ctan.org/tex-archive/biblio/bibtex/contrib/authordate/README
on CTAN	https://ctan.org/tex-archive/biblio/bibtex/contrib/authordate

338 *authorindex* – Index citations by author names

Web page on CTAN <https://ctan.org/pkg/authorindex>

name	authorindex
caption	Index citations by author names
author	Wettstein, Andreas
license	lppl = The LaTeX Project Public License (free)
version	(2019-07-27)
last changes	2019-07-27
year	2019
description	(no language specified) This package allows the user to create an index of all authors cited in a LaTeX document. Each author entry in the index contains the pages where these citations occur. Alternatively, the package can list the labels of the citations that appear in the references rather than the text pages. The package relies on BibTeX being used to handle citations. Additionally, it requires Perl (version 5 or higher).

346 autolatex – Automate compilation of large scale LaTeX projects

Web page on CTAN <https://ctan.org/pkg/autolatex>

name	AutoLaTeX
caption	Automate compilation of large scale LaTeX projects
author	Galland, Stéphane
copyright	Stéphane Galland (1998-2022)
license	gpl2 = GNU General Public License, version 2 (free)
version	41.1
description	(no language specified) AutoLaTeX is a set of GNU Make and Perl scripts that may be used to compile LaTeX projects. AutoLaTeX automates the compilation process by calling (pdf)LaTeX and BibTeX as they are required. It supports pdfLaTeX, LaTeX, dvips, epstopdf and BibTeX. AutoLaTeX also provides a powerfull feature for automatic generation of the figures that are included in the LaTeX project: for several figure sources (xfig, dia, umbrello, png, svg, xmi...) AutoLaTeX is able to generate the appropriate PDF picture. AutoLaTeX also supports pstex format (from xfig and gnuplot for example) and dot format (from the Graphviz package). The use of AutoLaTeX on the command line is similar to GNU Make. AutoLaTeX should be called with several targets to run.

348 *automagic* – Automagic numbering in Plain TeX

Web page on CTAN <https://ctan.org/pkg/automagic>

name	<code>automagic</code>
caption	Automagic numbering in Plain TeX
license	<code>noinfo = noinfo</code>
version	(1992-08-27)
last changes	1992-08-27
year	1992
description	(no language specified) Provides section macros, automatically numbered, automatic numbering of equations, provision for a table of contents, and a primitive label mechanism.
on CTAN	https://ctan.org/tex-archive/macros/plain/contrib/misc/automagic.tex
keyword	<code>plain-ext</code> (extensions to Plain TeX for higher-level constructs)
language(s)	no language specified
last access	2025-02-11

349 *automata* – Finite state machines, graphs and trees in MetaPost

Web page on CTAN <https://ctan.org/pkg/automata>

name	<code>automata</code>
caption	Finite state machines, graphs and trees in MetaPost
author	Puppis, Gabriele
license	<code>lppl</code> = The LaTeX Project Public License (free)
version	0.3
description	(no language specified) The package offers a collection of macros for MetaPost to make easier to draw finite-state machines, automata, labelled graphs, etc. The user defines nodes, which may be isolated or arranged into matrices or trees; edges connect pairs of nodes through arbitrary paths. Parameters, that specify the shapes of nodes and the styles of edges, may be adjusted.
documentation	(no language specified) <i>Example of use:</i> https://ctan.org/tex-archive/graphics/metapost/contrib/macros/automata/example.pdf
– local file	<code>./2358221656-example.pdf</code>

354 autopuncitems – Automatically punctuate lists

Web page on CTAN <https://ctan.org/pkg/autopuncitems>

name	autopuncitems
caption	Automatically punctuate lists
author	Ewasiuk, Kale
copyright	Kale Ewasiuk (2021-2022)
license	mit = MIT License (free)
version	(2022-04-16)
last changes	2022-04-16
year	2022

description	(no language specified) This package provides the <code>autopunc</code> option in the <code>enumitem</code> environments <code>itemize</code> , <code>enumerate</code> , and <code>description</code> to automatically punctuate the items. It uses lua pattern matching to modify the environment's contents.

355 *autosp* – A Preprocessor that generates note-spacing commands for MusiXTeX scores

Web page on CTAN	https://ctan.org/pkg/autosp
name	<code>autosp</code>
caption	A Preprocessor that generates note-spacing commands for MusiXTeX scores
author	Tennent, Bob
license	gpl2+ = GNU General Public License, version 2 or newer (free)
version	(2023-10-07)
last changes	2023-10-07
year	2023

description	(no language specified) This program simplifies the creation of MusiXTeX scores by converting (non-standard) commands of the form <code>\anotes ... \en</code> into one or more conventional note-spacing commands, as determined by the note values themselves, with <code>\sk</code> spacing commands inserted as necessary. The coding for an entire measure can be entered one part at a time, without concern for note-spacing changes within the part or spacing requirements of other parts. For example, <code>\anotes\qa J\qa K&\ca l\qa m\ca n\en</code> generates <code>\Notes\qa J\sk\qa K\sk&\ca l\qa m\sk\ca n\en</code> .

365 axessibility – Access to formulas in PDF files by assistive technologies

Web page on CTAN <https://ctan.org/pkg/axessibility>

name	axessibility
caption	Access to formulas in PDF files by assistive technologies
author	Murru, Nadir
author	Coriasco, Sandro
copyright	Anna Capietto, Sandro Coriasco, Tiziana Armano, Boris Doubrov, Alexander Kozlovskiy, Nadir Murru, Dragan Ahmetovic, Cristian Bernareggi (2018-2020)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	3.0
description	(no language specified) PDF documents containing formulas generated by LaTeX are usually not accessible by assistive technologies for visually impaired people and people with special educational needs (i.e., by screen readers and braille displays). The axessibility package manages this issue, allowing to create a PDF document where the formulas are read by these assistive technologies, since it automatically generates hidden comments in the PDF document (by means of the /ActualText attribute and/or suitable tags) in correspondence to each formula.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/axessibility/README

367 axodraw2 – Feynman diagrams in a LaTeX document

Web page on CTAN <https://ctan.org/pkg/axodraw2>

name	axodraw2
caption	Feynman diagrams in a LaTeX document
author	Vermaseren, Jos
author	Collins, John
copyright	John Collins and Jos Vermaseren (1994-2021)
license	gpl3+ = GNU General Public License, version 3 or newer (free)
version	2.1.1c (2021-03-05)
last changes	2021-03-05
year	2021
description	(no language specified) This package defines macros for drawing Feynman graphs in LaTeX documents. It is an important update of the axodraw package, but since it is not completely backwards compatible, we have given the style file a changed name. Many new features have been added, with new types of line, and much more flexibility in their properties. In addition, it is now possible to use <code>axodraw2</code> with pdfLaTeX, as well as with the LaTeX-dvips method. However with pdfLaTeX (and also LuaLaTeX and XeLaTeX), an external program, <code>axohelp</code>, is used to perform the geometrical calculations needed for the pdf code inserted in the output file. The processing involves a run of pdfLaTeX, a run of <code>axohelp</code>, and then another run of pdfLaTeX.

version	26.6 (2026-04-15)
last changes	2026-04-15
year	2026
description	(no language specified) Babel is the multilingual environment for LaTeX (tailored for LuaTeX, pdfTeX and XeTeX), and sometimes Plain. Its aim is to provide a comprehensive localization framework for different languages, scripts and cultures based on the latest advances on international standards (Unicode, W3C, OpenType). It supports about 300 languages (with various levels of coverage) across about 45 scripts, including complex (like CJK, Indic) and RTL ones. Besides the traditional <code>.ldf</code> files, there are many locales built on a modern core that utilizes descriptive <code>.ini</code> files, with tools providing precise control over hyphenation and line breaking, captions, date formats (across various calendars), spacing, transliteration, numbering and other locale-specific typographical rules.

393 babel-hebrew – Babel support for Hebrew

Web page on CTAN <https://ctan.org/pkg/babel-hebrew>

name	babel-hebrew
caption	Babel support for Hebrew
author	Bezos López, Javier
author	Braams, Johannes L.
author	Lavva, Boris
author	Rosendahl, Arthur
author	Fogiel, Udi
copyright	Boris Lavva and Johannes Braams (1997-2005)
copyright	Udi Fogiel (2023)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.5 (2026-02-16)
last changes	2026-02-16
year	2026
description	(no language specified) The package provides the language definition file for support of Hebrew in babel. Macros to control the use of text direction control of TeX–XeT and e-TeX are provided (and may be used elsewhere). Some shortcuts are defined, as well as translations to Hebrew of standard “LaTeX names”. For questions, bug reports, or support, please open an issue in the repository. Note: the package is in maintenance mode. Bugs will be fixed, but no new features will be added. The <code>.ldf</code> file is only compatible with pdfLaTeX or LaTeX. Even then, for documents containing more than a short text in Hebrew, it is strongly recommended to use LuaTeX (with babel’s <code>.ini</code> file or polyglossia). For short

394 babel-hungarian – Babel support for Hungarian

texts with pdfTeX, use the `.ini` file. Consult the documentation of babel for better settings for Hebrew.

422 babel-spanglish – Simplified Spanish support for Babel

Web page on CTAN <https://ctan.org/pkg/babel-spanglish>

name babel-spanglish
caption Simplified Spanish support for Babel
author Rivera, Luis
copyright J. Luis Rivera N. (2008-2015)
license lpl1.3 = The LaTeX Project Public License 1.3 (free)
version 0.3 (2015-05-20)
last changes 2015-05-20
year 2015
description (no language specified) The package provides very simplified (or ultra sloppy) support for Spanish in **Babel**, mostly as a fallback in case **spanish.lfd** fails for some reason. The package provides basic support for Spanish hyphenation, captions, date, frenchspacing, indentfirst, symbolic footnotes, enumerations, small caps roman numerals, and a handful of shorthands and Spanish mathematical operators. No options or attributes for customization are provided.
According to the author, the purpose of this package is nowadays better served by the **babel** package with option `spanish.mexico`.
documentation (no language specified) *Readme:*

434 **background** – Placement of background material on pages of a document

Web page on CTAN <https://ctan.org/pkg/background>

name	background
caption	Placement of background material on pages of a document
author	Medina Arellano, Gonzalo
copyright	Gonzalo Medina (2009, 2012, 2014)
license	lppl = The LaTeX Project Public License (free)
version	2.1 (2014-03-04)
last changes	2014-03-04
year	2014

description	(no language specified) The package offers the placement of background material on the pages of a document. The user can control many aspects (contents, position, color, opacity) of the background material that will be displayed; all placement and attribute settings are controlled by setting key values. The package makes use of the everypage package, and uses pgf/tikz for attribute control.

443 bakoma – A TeX distribution for MS-Windows VISTA/XP/2000

Web page on CTAN <https://ctan.org/pkg/bakoma>

name	bakoma
caption	A TeX distribution for MS-Windows VISTA/XP/2000
author	Malyshev, Basil
license	shareware = Shareware: A fee is required (not free)
version	9.51
description	(no language specified) BaKoMa TeX supports two compatible user interfaces: (1) BaKoMa TeX Word - Visual (True WYSIWYG) LaTeX Editor; (2) Text Editor + DVI Viewer - Classical IDE. The system supports the use of scalable fonts (OpenType, TrueType, PostScript Type 1 and Type 3). It supports import of EPS, PDF, FIG, JPEG, PNG, GIF, TIFF, HPGL, DXY, PCX, MSP, BMP, and WMF graphical formats. In advance, PostScript enabled graphics engine handles such packages as PSTricks, PSfrag, PowerDot, Prosper, Beamer, etc. The system supports generation of PDF, SVG, PNG, HTML, PS, and printing on any printer supported by a driver under MS-Windows.

documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/systems/win32/bakoma/README
on CTAN	https://ctan.org/tex-archive/systems/win32/bakoma

445 bakoma-games – BaKoMa modules for music and gamesWeb page on CTAN <https://ctan.org/pkg/bakoma-games>

name	bakoma-games
caption	BaKoMa modules for music and games
author	Malyshev, Basil
license	shareware = Shareware: A fee is required (not free)
description	(no language specified) This module includes popular macro packages described in chapters 7 (Preparing music scores: MusiXTeX) and 8 (Playing games: Chess, Xiangqi — Chinese Chess, Go, Backgammon, Bridge, Crosswords) of the ‘LaTeX graphics Companion’. They are precompiled for use, together with fonts and documentation, directly in BaKoMa TeX. Fonts used by some packages are converted into formats suitable both for printing and for PDF generation. For example, for Chess the diagram fonts are converted into vector Type 3 font format. Board black squares are coded as a gray color instead of dashing. This approach gives the best results on printers and displays. Fonts for in-line notation are in Type 1 font format. For Go the special fonts are too hard to convert automatically and have been efficiently coded in Type 3 font format. For Backgammon the fonts were originally dithered as halftone, making them unsuitable for PDF. The halftone was emulated by using a grey colour in Type 3 fonts.
documentation on CTAN	(no language specified) <i>Summary of the bundle:</i> https://ctan.org/tex-archive/systems/win32/bakoma/macros/games.html https://ctan.org/tex-archive/systems/win32/bakoma/macros/games.bkz

454 bankstatement – A LaTeX class for bank statements based on csv data

Web page on CTAN <https://ctan.org/pkg/bankstatement>

name	bankstatement
caption	A LaTeX class for bank statements based on csv data
author	Kleber, Josef
license	lppl = The LaTeX Project Public License (free)
version	0.9.2 (2015-11-14)
last changes	2015-11-14
year	2015
description	(no language specified) More and more banks allow their customers to download posting records in various formats. By using the <code>bankstatement</code> class, you can create bank statements, as long as a csv format is available. At the moment, the <code>csv-mt940</code> and <code>csv-camt</code> formats — used by many german Sparkassen — are supported. You can quite easily add support for other csv formats. Simply define the order of the keys in the csv data file and how to use them. The terminology in this class — such as BIC (Business Identifier Code) or IBAN (International Bank Account Number) — is based on usage in the SEPA (Single Euro Payments Area). The user may adjust the terminology to suit local needs.

461 *bargraph-js* – Create bar graphs using form fields and JavaScript

Web page on CTAN	https://ctan.org/pkg/bargraph-js
name	bargraph-js
caption	Create bar graphs using form fields and JavaScript
author	Story, Donald P.
copyright	D. P. Story (2019)
license	lpl1.2 = The LaTeX Project Public License 1.2 (free)
version	0.8 (2019-04-07)

last changes	2019-04-07
year	2019
description	(no language specified) This package uses Acrobat forms and Acrobat JavaScript API to create and manipulate interactive bar graphs. This means the user can enter data in a couple of formats, to populate the bar graphs. The package can also be used to create and display discrete probability distributions, for both the probability mass function (pmf) and the cumulative distribution function (cdf) of a distribution. Any bar graph created by this package requires Adobe Reader DC (or Acrobat) for full functionality. PDF Creators: Any of the usual PDF creators can be used; however, to repeat, an Adobe PDF reader is required for full functionality.

468 basicarith – Macros for typesetting basic arithmetic

Web page on CTAN	https://ctan.org/pkg/basicarith
name	basicarith
caption	Macros for typesetting basic arithmetic
author	Goodman, Donald P.
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.1
description	(no language specified) The package provides macros for typesetting basic arithmetic, in the style typically found in textbooks. It focuses on the American style of performing these algorithms. It is written mostly in low-level TeX, with the goal that it should run in either plain TeX or LaTeX, but there are two constructions that currently prevent this. It is highly configurable, with macros and lengths described in the documentation.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/basicarith/README

Web page on CTAN <https://ctan.org/pkg/baskervaldadf>

name	baskervaldadf
caption	Baskervald ADF fonts collection with TeX/LaTeX support
author	Rees, Clea F.
license	gpl2 = GNU General Public License, version 2 (free)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1

description	(no language specified) Baskervald ADF is a serif family with lining figures designed as a substitute for Baskerville. The family currently includes upright and italic or oblique shapes in each of regular, bold and heavy weights. All fonts include the slashed zero and additional non-standard ligatures. The support package renames them according to the Karl Berry fontname scheme and defines two families. One of these primarily provides access to the "standard" or default characters while the other supports additional ligatures. The included package files provide access to these features in LaTeX.

copyright	Vedran Miletić, Joseph Wright (2011-2015)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
license	gpl2+ = GNU General Public License, version 2 or newer (free)
license	fdl = Free Documentation License (free)
version	3.77 (2026-01-22)
last changes	2026-01-22
year	2026
description	(no language specified) The beamer LaTeX class can be used for producing slides. The class works in both PostScript and direct PDF output modes, using the pgf graphics system for visual effects. Content is created in the frame environment, and each frame can be made up of a number of slides using a simple notation for specifying material to appear on each slide within a frame. Short versions of title, authors, institute can also be specified as optional parameters. Whole frame graphics are supported by plain frames. The class supports figure and table environments, transparency effects, varying slide transitions and animations. Beamer also provides compatibility with other packages like prosper.

The package now incorporates the functionality of the former `translator` package, which is used for customising the package for use in other language environments.

Beamer depends on the following other packages: `atbegshi` , `etoolbox` , `hyperref` , `ifpdf` , `pgf` , and `translator` .

494 beamer-reveal – Convert beamer slides to reveal.js HTML presentations

Web page on CTAN	https://ctan.org/pkg/beamer-reveal
name	<code>beamer-reveal</code>
caption	Convert beamer slides to reveal.js HTML presentations
author	Daems, Walter
copyright	Walter Daems (2025-2026)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.10 (2026-04-08)
last changes	2026-04-08
year	2026

description	(no language specified) Beamer is a very powerful and convenient document class to create presentations and slides. However, integrating multimedia in it, is still a bit of a faff. The (limited) functionality heavily relies on the availability of acroread. This package allows you to convert your beamer presentation to the reveal.js framework, rendering your presentation as an HTML website in your browser. This allows for easy incorporation of videos, audio fragments, iframe chunks, images and LaTeX animations.

504 *beamercolorthemeowl* – A flexible beamer color theme to maximize visibility

Web page on CTAN <https://ctan.org/pkg/beamercolorthemeowl>

name	beamercolorthemeowl
caption	A flexible beamer color theme to maximize visibility
author	Churchley, Ross
copyright	Ross Churchley (2016)
license	lpp1.3 = The LaTeX Project Public License 1.3 (free)
version	0.1.1 (2016-03-15)
last changes	2016-03-15
year	2016
description	(no language specified) This package provides a flexible dark or light colour theme designed for maximum readability in environments where most themes fall flat.

Main features:

- Dark color theme for presenting in low-light conditions.
- Optional light color theme for presenting in bright ambient light.
- Redefines color names "red", "green", "blue", "yellow" to values that are visible when displayed by certain projectors, particularly those with a very bright green channel and dim red and blue channels. This behaviour can be optionally disabled, with the provided colours also available as "OwlRed", "OwlGreen", etc.

506 beamerposter – Extend beamer and a0poster for custom sized posters

Web page on CTAN <https://ctan.org/pkg/beamerposter>

name	beamerposter
caption	Extend beamer and a0poster for custom sized posters
author	Deselaers, Thomas
author	Dreuw, Philippe
copyright	Philippe Dreuw and Thomas Deselaers (2015,2018)
license	gpl = GNU General Public License (free)
license	lppl = The LaTeX Project Public License (free)
version	1.13
description	(no language specified) The package enables the user to use beamer style operations on a canvas of the sizes provided by a0poster ; font scaling is available (using packages such as type1cm if necessary). In addition, the package allows the user to benefit from the nice colour box handling and alignment provided by the beamer class (for example, with rounded corners and shadows). Good looking posters may be created very rapidly. Features include: • scalable fonts using the fp and type1cm packages;

	• posters in A-series sizes, and custom sizes like double A0 are possible; • still applicable to custom beamer slides, e.g. 16:9 slides for a wide-screen (i.e. 1.78 aspect ratio); • orientation may be portrait or landscape; a ‘debug mode’ is provided.

508 beamerswitch – Convenient mode selection in Beamer documents

Web page on CTAN <https://ctan.org/pkg/beamerswitch>

name	beamerswitch
caption	Convenient mode selection in Beamer documents
author	Ball, Alex
copyright	Alex Ball (2016-2022)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.9 (2022-08-20)
last changes	2022-08-20
year	2022
description	(no language specified) This class is a wrapper around the beamer class to make it easier to use the same document to generate the different forms of the presentation: the slides themselves, an abbreviated slide set for transparencies or online reference, an n-up handout version (various layouts are provided), and a transcript or set of notes using the article class. The class provides a variety of handout layouts, and allows the mode to be chosen from the command line (without changing the document itself).

last changes	2026-02-23
year	2026
description	(no language specified) This package provides the Durham Beamer Theme, a content-first presentation theme for LaTeX Beamer designed for teaching, research, and long-form academic presentations. The theme emphasizes structural clarity, pacing awareness, and layout stability under dense textual and mathematical content. It is implemented entirely from first principles and not derived from any existing Beamer theme. Conceptual inspiration from established themes such as Metropolis is acknowledged; no external code is reused. The color palette is inspired by the visual identity of Durham University. This package is an independent academic contribution and not an official or endorsed Durham University template. The package includes a modular theme implementation, a demo document with compiled PDF, and a user manual.

description	(no language specified) This package provides a modern, minimal-ish, versatile, LaTeX3 and extendable yet robust Beamer theme with some lines of code gathered or borrowed from other themes. It uses the l3build system to both build and verify (Test-Driven Development) the delivered code. ”Gotham” tries to bring higher flexibility thanks to LaTeX3 implementation on top of the good-looking Metropolis theme.

532 beamertheme-trigon – A modern, elegant, and versatile theme for Beamer

Web page on CTAN <https://ctan.org/pkg/beamertheme-trigon>

name beamertheme-trigon

caption A modern, elegant, and versatile theme for Beamer

author Lambert, Thomas

copyright Thomas Lambert (2021-2023)

license cc-by-sa-4 = CC BY-SA 4.0 (free)

version 0.7.0 (2023-02-20)

last changes 2023-02-20

year 2023

description (no language specified) This package provides a modern, elegant and versatile theme for **Beamer**, with a high degree of customization.

Trigon found its origin and inspiration in the graphical guidelines resulting from the visual identity overhaul of the University of Liège. Although directly inspired from these guidelines, the theme was stripped out of any mention or specificities related to the University and its faculties. This makes the Trigon theme perfectly suitable for many different contexts.

The final product provides a modern, elegant and versatile theme with a high degree of customization. The main design focuses on triangular shapes for major layout elements and noise minimization for the main body of the work.

The theme's implementation is heavily inspired from the **Metropolis theme**. Most options from **Metropolis** have been ported to Trigon in order to improve customization and ease-of-use. Trigon also includes different styles and layouts for the main title page, the section page and the default slide background.

year	2025
description	(no language specified) A modern and elegant Beamer theme designed for academic and professional presentations. It offers customizable footer styles (quarter-circle, full bar, classic), decorative elements that can be enabled/disabled, and enhanced typography options for headers. The theme includes special layouts for code listings, section pages, and standout frames. Color scheme can be customized through theme options, with support for both main and accent colors. The typography system supports both serif and sans-serif variants, and provides flexible font styling across different elements.

	Focused on readability and visual appeal, Celestia offers a clean and professional look for presentations.

545 *beaulivre* – Write your books in a colorful way

Web page on CTAN <https://ctan.org/pkg/beaulivre>

name	beaulivre
caption	Write your books in a colorful way
author	XU, Jinwen
copyright	Jinwen XU (2021-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	(2024-02-20)
last changes	2024-02-20
year	2024
description	(no language specified) This package provides a LaTeX class for typesetting books with a colorful design. Currently, it has native support for Chinese (both simplified and traditional), English, French, German, Italian, Japanese, Portuguese (European and Brazilian), Russian and Spanish typesetting. It compiles with either XeLaTeX or LuaLaTeX. This is part of the <i>colorist</i> class series and depends on <code>colorist.sty</code> from the <i>colorist</i> package. The package name "beaulivre" is taken from the French words "beau" (= "beautiful") and "livre" (= "book").

documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/unicodetex/latex/beaulivre/README.md

561 *bestpapers* – A BibTeX package to produce lists of authors' best papers

Web page on CTAN <https://ctan.org/pkg/bestpapers>

name	bestpapers
caption	A BibTeX package to produce lists of authors' best papers
author	Veytsman, Boris
license	pd = Public Domain Software (free)
version	1.0

description	(no language specified) Many people preparing their résumés find the requirement "please list five (or six, or ten) papers authored by you". The same requirement is often stated for reports prepared by professional teams. The creation of such lists may be a cumbersome task. Even more difficult is it to support such lists over the time, when new papers are added. The BibTeX style <code>bestpapers.bst</code> is intended to facilitate this task. It is based on the idea that it is easier to score than to sort: We can assign a score to a paper and then let the computer select the papers with highest scores. This work was commissioned by the Consumer Financial Protection Bureau, United States Treasury. This package is in the public domain.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/biblio/bibtex/contrib/bestpapers/README

 name | bezierplot || caption | Approximate smooth function graphs with cubic bezier splines for use with TikZ or MetaPost |
author	Romer, Linus
copyright	Linus Romer (2018-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.6 (2024-11-02)
last changes	2024-11-02
year	2024
description	(no language specified) This package consists of a Lua program as well as a (Lua)LaTeX .sty file. Given a smooth function, *bezierplot* returns a smooth bezier path written in TikZ notation (which also matches MetaPost) that approximates the graph of the function. For polynomial functions of degree ≤ 3 and their inverses the approximation is exact (up to numeric precision). *bezierplot* also finds special points such as extreme points and inflection points and reduces the number of used points.

year	2024
description	(no language specified) <code>BHCexam.cls</code> is a LaTeX document class designed for typesetting exams. It is currently used by the Mathcrowd Problem Database to generate exam PDF files. The class supports the following features: • Support for configuring whether to display answers. • Ability to set whether the document is formatted in multiple columns.

- Alignment customization options.
- Automatic alignment of option lengths to a grid.
- Ability to adjust the width of blank lines based on the length of fill-in-the-blank answers.
- Option to display or hide scores for question groups.
- Customizable answer space for each question.
- Ability to restart numbering in question groups.
- Support for sub-questions and nested sub-questions in short-answer questions.

version	4.7 (2025-11-13)
last changes	2025-11-13
year	2025

description (no language specified) This Java command line application may be used to extract glossary information stored in a .bib file and convert it into glossary entry definition commands.

This application should be used with *glossaries-extra.sty* 's 'record' package option. It performs two functions in one:

- selects entries according to records found in the .aux file (similar to *bibtex*),
- hierarchically sorts entries and collates location lists (similar to *makeindex* or *xindy*).

The glossary entries can then be managed in a system such as *JabRef* , and only the entries that are actually required will be defined, reducing the resources required by TeX.

The supplementary application *convertgls2bib* can be used to convert existing .tex files containing definitions (\newglossaryentry etc.) to the .bib format required by *bib2gls* .

582 bib2xhtml – Convert BibTeX Files into XHTML

Web page on CTAN <https://ctan.org/pkg/bib2xhtml>

name	bib2xhtml
caption	Convert BibTeX Files into XHTML
author	Spinellis, Diomidis
author	Hull, David
license	gpl = GNU General Public License (free)
version	2.35
description	(no language specified) bib2xhtml is a program that converts BibTeX files into HTML (specifically XHTML 1.0). The conversion is mostly done by specialized BibTeX style files, derived from a converted bibliography style template. This ensures that the original BibTeX styles are faithfully reproduced. Some postprocessing is performed by Perl code. This is an update of the bib2html program written by David Hull in 1996 and maintained by him until 1998. I have been a happy user of the program since 1995, using the program to keep my publication list up to date, and, lately, to generate the on-line bibliography list for my book <i>Code Reading: The Open Source Perspective</i> (Addison-Wesley 2003). After 1998 no other changes were made to the program, and I failed to locate an active program home page. Since there were a number of changes I needed to bring the program up to date with evolving web standards, I decided to adopt bib2html for maintenance, evolution, and further distribution. The first new public release made in 2004, features support for XHTML 1.0.

583 *bibarts* – “Arts”-style bibliographical informationWeb page on CTAN <https://ctan.org/pkg/bibarts>

name BibArts

caption “Arts”-style bibliographical information

author Baumann, Timo

license gpl = GNU General Public License (free)

version 2.6

description (no language specified) BibArts is a LaTeX package to assist in making bibliographical features common in the arts and the humanities (history, political science, philosophy, etc.).

`bibarts.sty` provides commands for quotations, abbreviations, and especially for a formatted citation of literature, journals (periodicals), edited sources, and archive sources. In difference to earlier versions, BibArts 2.x helps to use slanted fonts (italics) and is able to set *ibidem* automatically in footnotes. It will also copy all citation information, abbreviations, and register key words into lists for an automatically generated appendix. These lists may refer to page and footnote numbers. BibArts has nothing to do with **BibTeX**. The lists are created by `bibsort` (see below).

BibArts requires the program `bibsort`, for which the sources and a Windows executable are provided. This program creates the bibliography without using **MakeIndex** or **BibTeX**. Its source is not written with any specific operating system in mind. A summary of contents is in English; the full documentation is in German.

584 bibbreeze – A referencing package for automatically reconstructing bibliography data

Web page on CTAN <https://ctan.org/pkg/bibbreeze>

name	BibBreeze
caption	A referencing package for automatically reconstructing bibliography data
author	Tahsiri, Amir Mohammad
copyright	Amir Mohammad Tahsiri (2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1
description	(no language specified) This LaTeX package, called BibBreeze written using LaTeX3, is a referencing package that automates bibliography reconstruction, eliminating manual effort in reference handling. It reorders disorganized fields for bibliography entries, fills in missing fields, and produces polished, referencing style-compliant bibliographies—optimized for researchers, academics, and writers. Currently, the package’s referencing style is designed for APA (with both numeric and author-year in-text citations) with more styles (Harvard, Chicago, AMA, etc.) to come.

Web page on CTAN <https://ctan.org/pkg/biber>

name	biber
caption	A BibTeX replacement for users of BibLaTeX
author	Kime, Philip
author	Charette, François
license	artistic2 = Perl Artistic License, version 2 (free)
version	2.20 (2024-03-22)

last changes	2024-03-22
year	2024
description	(no language specified) Biber is a BibTeX replacement for users of BibLaTeX . Biber supports full UTF-8, can (re)-encode input and output, supports highly configurable sorting, dynamic bibliography sets and many other features. The CTAN distribution offers a compressed tar archive of the sources, etc., together with "binary" distributions for a variety of platforms. Note: on SourceForge biber is formally named "biblatex-biber", to distinguish it from an earlier (now apparently moribund) project called "biber".

605 *bibex* – Automatic extraction of references from BibTeX databases

Web page on CTAN <https://ctan.org/pkg/bibex>

name	Bibex
caption	Automatic extraction of references from BibTeX databases
author	Guéhéneuc, Yann-Gaël
copyright	Yann-Gaël Guéhéneuc (2003)
license	gpl = GNU General Public License (free)
description	(no language specified) Bibex, BibTeX Extractor, is a 100%-pure Java program that automates the extraction of bibliographic references from BibTeX databases using regular expressions. Using the Bibex user interface, it is possible to define, to save, and to perform BibTeX references extraction tasks easily and automatically. Bibex is very useful when using <i>bibtopic</i> or similar packages.

607 *bibextract* – Utilities to extract BibTeX data

Web page on CTAN <https://ctan.org/pkg/bibextract>

name	<code>bibextract</code>
caption	Utilities to extract BibTeX data
author	Beebe, Nelson H. F.
license	gpl = GNU General Public License (free)
version	1.09
description	(no language specified) A set of scripts for extracting entries from <code>.bib</code> file, in particular those cited in a particular document. <code>Bibextract</code> itself extracts from a list of BibTeX <code>.bib</code> files those bibliography entries that match a pair of specified regular expressions, sending them to <code>stdout</code>, together with all BibTeX <code>@Preamble{...}</code> and <code>@String{...}</code> commands. <code>Citefind</code> from a list of BibTeX <code>.bib</code> files those bibliography entries that match a specified list of citation tags, possibly produced by <code>citetags</code>. <code>Citetags</code> extracts BibTeX citation tags from a LaTeX source file or <code>.aux</code> file and sends them to <code>stdout</code>, possibly for later input to <code>citefind</code>.

608 *bibfile-reformat-pages* – Puts .bib file page ranges into uniform format

Web page on CTAN <https://ctan.org/pkg/bibfile-reformat-pages>

name	bibfile-reformat-pages
caption	Puts .bib file page ranges into uniform format
author	Pearlmutter, Barak A.
copyright	Barak A. Pearlmutter (2004)

license	gpl = GNU General Public License (free)
description	(no language specified) This is a small gawk script to put all the <code>pages=</code> page ranges in a <code>.bib</code> file into a uniform format, either 1234-1256 or upon request 1234-56; null ranges such as 1234-1234 are always scrunched to just 1234. The script squeezes out spaces around the separator; can make all separators one- or two-hyphens upon request. The script is very conservative: it is probably impossible for it actually to mess up a file.

609 *bibfilex* – A free bibliographic manager for BibLaTeX

Web page on CTAN <https://ctan.org/pkg/bibfilex>

name	bibfilex
caption	A free bibliographic manager for BibLaTeX
author	Nardello, Massimo
license	gpl3 = GNU General Public License, version 3 (free)
version	1.2.8
description	(no language specified) Bibfilex is a free bibliographic manager for GNU/Linux, Windows and OS X. It is useful for creating and managing archives of bibliographical items with possible attachments of any kind according to BibLaTeX structure and rules, but it may also be used with a wordprocessor like Writer or Word. Bibfilex is less advanced than other bibliographic managers like JabRef or KBibTeX and allows only few customizations. Its strength is simplicity and speed, since it's a compiled software and uses a fast database, SQLite, for storing data. Bibfilex is written in Free Pascal with Lazarus.

610 *bibfind* – Prints entries in your bib file that match search string

Web page on CTAN <https://ctan.org/pkg/bibfind>

name	<code>bibfind</code>
caption	Prints entries in your bib file that match search string
author	Breivik, Oyvind
license	artistic = Perl Artistic License (not free)
description	(no language specified) Bibfind reads your bib file and prints those references that match your search string. It works a bit like <code>grep</code> , only it prints the whole entry (paragraph) and not just the line that matches. The program is useful for quickly checking whether a certain reference is in your database, or what year some guy made that major breakthrough, etc. You can use Perl regexes in your search string and hence wield the awesome power of Perl's pattern matching.

611 bibhtml – BibTeX support for HTML files

Web page on CTAN <https://ctan.org/pkg/bibhtml>

name	bibhtml
caption	BibTeX support for HTML files
author	Gray, Norman
license	gpl = GNU General Public License (free)
version	2.0.2 (2013-09-08)
last changes	2013-09-08
year	2013
description	(no language specified) Bibhtml consists of a Perl script and a set of BibTeX style files, which together allow you to output a bibliography as a collection of HTML files. The references in the text are linked directly to the corresponding bibliography entry, and if a URL is defined in the entry within the BibTeX database file, then the generated bibliography entry is linked to this. The package provides three different style files derived from each of the standard plain.bst and alpha.bst, as well as two style files derived from abbrev.bst and unsrt.bst (i.e., eight in total).

613 biblatex – Sophisticated Bibliographies in LaTeX

Web page on CTAN <https://ctan.org/pkg/biblatex>

name	BibLaTeX
caption	Sophisticated Bibliographies in LaTeX
author	Kime, Philip
author	Lehman, Philipp
copyright	Philip Kime, Audrey Boruvka, Joseph Wright (2012-2025)
copyright	Philip Kime, Moritz Wemheuer (2018-2025)
copyright	Philipp Lehman (2006-2012)

license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	3.21 (2025-07-10)
last changes	2025-07-10
year	2025
description	(no language specified) BibLaTeX is a complete reimplementa- tion of the bibliographic facilities provided by LaTeX. Formatting of the bibliography is entirely controlled by LaTeX macros, and a working knowledge of LaTeX should be sufficient to design new bibliography and citation styles. BibLaTeX uses its own data backend program called "biber" to read and process the bibliographic data. With biber, BibLaTeX has many features rivalling or surpassing other bibliography systems. To mention a few: • Full Unicode support • Highly customisable sorting using the Unicode Collation Algorithm + CLDR tailoring • Highly customisable bibliography labels • Complex macro-based on-the-fly data modification without changing your data sources • A tool mode for transforming bibliographic data sources • Multiple bibliographies and lists of bibliographic information in the same document with different sorting • Highly customisable data source inheritance rules • Polyglossia and babel support for automatic language switching for bibliographic entries and citations • Automatic bibliography data recoding (UTF-8 -&gt; latin1, LaTeX macros -&gt; UTF-8 etc) • Remote data sources • Highly sophisticated automatic name and name list disambiguation system • Highly customisable data model so users can define their own bibliographic data types • Validation of bibliographic data against a data model • Subdivided and/or filtered bibliographies, bibliographies per chapter, section etc.

Apart from the features unique to BibLaTeX, the package also incorporates
core features of the following packages: **babelbib**, **bibtopic**, **bibunits**,
chapterbib, **cite**, **inlinebib**, **mcite** and **mciteplus**, **mlbib**, **multibib**, **splitbib**.

The package strictly requires

- **e-TeX**
- **BibTeX**, `bibtex8`, or **Biber**
- **etoolbox** .1 or later
- **logreq** 1.0 or later
- **keyval**
- **ifthen**
- **url**

Biber, **babel** / **polyglossia**, and **csquotes** 4.4 or later are strongly recommended.

615 **biblatex-abs-annotate** – Annotated bibliographies with abstracts and annotations for BibLaTeX

Web page on CTAN <https://ctan.org/pkg/biblatex-abs-annotate>

name	biblatex-abs-annotate
caption	Annotated bibliographies with abstracts and annotations for BibLaTeX
author	Wimpy, Cameron
copyright	Cameron Wimpy (2026)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.1.1 (2026-04-19)
last changes	2026-04-19
year	2026
description	(no language specified) The package extends any BibLaTeX style with an annotated-bibliography presentation: below each reference it renders the entry's abstract and the user's annotation, both drawn from standard BibLaTeX fields (abstract, and annotation or annote). Either field may be omitted on a per-entry basis, so the same bibliography can mix plain and annotated citations freely. The package patches the sixteen standard BibLaTeX drivers via xpatch, so it composes with any bibliography style that uses the standard driver names (authoryear, apa, numeric, chicago-authordate, etc.). All visual aspects (e.g., labels, fonts, indentation, and spacing) are controlled by redefinable commands and lengths. The package is the LaTeX component of the cross-format ab-annotate toolchain, which shares the same .bib conventions with companion packages for Typst and Quarto.

616 *biblatex-accursius* – Citing features for Italian jurists

Web page on CTAN <https://ctan.org/pkg/biblatex-accursius>

name	<code>biblatex-accursius</code>
caption	Citing features for Italian jurists
author	Contini, Francesco
copyright	Francesco Contini (2024)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0
description	(no language specified) This style is primarily aimed at Italian legal jurists and provides them with the ability to cite legal materials, such as legislative acts, regulations, soft law, treaties and case law. Additionally, the style codifies the most prevalent citation practices amongst Italian legal scholars. Specifically, with regard to the citation of legal materials, this style, instead of developing the entry types <code>@jurisdiction</code>, <code>@legal</code>, and <code>@legislation</code>, creates a new one: <code>@itprov</code>, which can describe a wide range of legal sources. Furthermore, it creates a second new entry type: <code>@notetoprov</code>, which is used specifically to cite so-called "note a sentenza" (notes to judgement), which closely mirrors <code>@itprov</code>, but is literature and, therefore, is intended to have the same treatment as standard entry types. The citation commands are the standard ones. The <code>@itprov</code> entry type comprises the list <code>institution</code> to indicate which authority adopted the cited act; the <code>kindprov</code>, <code>nprov</code>, <code>provtitle</code> (or <code>titleparties</code>) fields to indicate the minimal 'ID' of the act and many others. Finally, the entry type allows to specify where the cited act was consulted, whether from an official bulletin (the <code>ofbull</code> field), an official portal or a private database (the <code>ofportal</code> field), or a journal or collection.

621 *biblatex-apa6* – BibLaTeX citation and reference style for APA 6th Edition

Web page on CTAN <https://ctan.org/pkg/biblatex-apa6>

name	<code>biblatex-apa6</code>
caption	BibLaTeX citation and reference style for APA 6th Edition
author	Kime, Philip
copyright	Philip Kime (2010-2020)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	8.5 (2020-08-28)
last changes	2020-08-28
year	2020
description	(no language specified) This is a fairly complete BibLaTeX style (citations and references) for APA (American Psychological Association) 6th Edition conformant publications. It implements and automates most of the guidelines in the APA 6th edition style guide for citations and references. An example document is also given which typesets every citation and reference example in the APA 6th edition style guide. This is a legacy style for 6th Edition documents. Please use the BibLaTeX-apa style package for the latest APA edition conformance.

version	2.2 (2019-12-30)
last changes	2019-12-30
year	2019
description	(no language specified) This package provides additional BibLaTeX styles for German humanities. Its core purpose is to enable the referencing rules of the Romano-Germanic Commission (<i>&gt;Römisch-Germanische Kommission</i>), the department of prehistory of the German Archaeological Institute (<i>Deutsches Archäologisches Institut</i>), since these are referenced by most guidelines in German prehistory and medieval archaeology and serve as a kind of template. <i>biblatex-archaeology</i> provides verbose, numeric and author date styles as well and adaptations to specific document types like exhibition and auction catalogues.

version	1.2.1 (2017-11-19)
last changes	2017-11-19
year	2017

description	(no language specified) When studying antique and medieval literature, we may find many different texts published with the same title, or, in contrary, the same text published with different titles. To avoid confusion, scholars have published <i>claves</i>, which are books listing ancient texts, identifying them by an identifier — a number or a string of text. For example, for early Christianity, we have the <i>Bibliotheca Hagiographica Graeca</i>, the <i>Clavis Apocryphorum Novi Testamenti</i> and other <i>claves</i>. It could be useful to print the identifier of a texts in one specific <i>clavis</i>, or in many <i>claves</i>. The package allows us to create new field for different <i>claves</i>, and to present all these fields in a consistent way.

description	(no language specified) This is a BibLaTeX style that implements the bibliography style of the Council of Science Editors (CSE) for BibLaTeX. I did this style file by request of a user of my LaTeX template novathesis . He was quite thorough, double and triple checking that the output was conforming to the requirements of his University (Faculty of Veterinary from the University of Lisbon). Although this <code>biblatex-cse</code> style served the requirements from his University, there may still be some unconformities to the CSE style. If you find any, please open an issue in the project's page on GitHub or, even better, submit a pull request.

caption	BibLaTeX style for the École nationale des chartes (Paris)
author	Camps, Jean-Baptiste
copyright	J.B. Camps (2011-2024)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.1 (2024-12-02)
last changes	2024-12-02
year	2024
description	(no language specified) This package provides a citation and bibliography style for use with BibLaTeX. It conforms to the bibliographic standards used at the École nationale des chartes (Paris), and may be suitable for a more general use in historical and philological works. The package was initially derived from historische-zeitschrift, with the necessary modifications.

author	Wemheuer, Moritz
copyright	Moritz Wemheuer (2017-2025)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.20 (2025-06-24)
last changes	2025-06-24
year	2025
description	(no language specified) The BibLaTeX-ext bundle provides styles that slightly extend the standard styles that ship with BibLaTeX. The styles offered in this bundle provide a simple interface to change some of the stylistic decisions made in the standard styles. At the same time they stay as close to their standard counterparts as possible, so that most customisation methods can be applied here as well.

caption	Sophisticated Bibliographies in LaTeX (multiscript version)
author	Kime, Philip
copyright	Philipp Lehman (2006-2012)
copyright	Philipp Lehman, Joseph Wright, Audrey Boruvka, Philip Kime (2012-2023)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	4.0-1

description	(no language specified) This package is the "multiscript" version of the BibLaTeX package intended to solve the issues faced by those wishing to create multilingual bibliographies. It is intended to be backwards-compatible with the standard BibLaTeX package and includes significantly enhanced optional functionality: • Fields in data files can have different form/language alternates in the same entry • Options to select/print a specific alternate are generally available • babel/polyglossia language switching is done automatically based on the language associated with a field The intention is that this version will eventually replace standard BibLaTeX and is being released as an independent package to allow for wider testing and feedback. It can be installed in parallel with standard BibLaTeX and the package name is <code>biblatex-ms</code>. It requires the use of the multiscript version of biber (<code>biber-ms</code>).

663 **biblatex-opcit-booktitle** – Use **op. cit.** for the booktitle of a subentry

Web page on CTAN <https://ctan.org/pkg/biblatex-opcit-booktitle>

name	biblatex-opcit-booktitle
caption	Use <i>op. cit.</i> for the booktitle of a subentry
author	Rouquette, Maïeul
copyright	Maïeul Rouquette (2015-2018)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.9.0 (2018-10-24)
last changes	2018-10-24
year	2018
description	(no language specified) The default citation styles <code>verbose-trad1+</code> ; <code>verbose-trad2</code> ; <code>verbose-trad3</code> use the <i>op. cit.</i> form in order to have a shorter reference when a title has already been cited. However, when you cite two entries which share the same booktitle but not the same <code>title</code> , the <i>op. cit.</i> mechanism does not work.

This package enables to obtain references like this:

- Author1, Title, in Booktitle, Location, Publisher, Year, pages
- xxx
- Author2, Title2, in Booktitle, *op. cit.*, pages.

version	3.4 (2026-04-14)
last changes	2026-04-14
year	2026
description	(no language specified) This bundle provides four BibLaTeX styles that implement (many of) the stipulations and examples provided by the 2014 <i>New Hart's Rules</i> and the 2002 <i>Oxford Guide to Style</i> : • ‘oxnotes’ is a style similar to the standard ‘verbose’, intended for use with footnotes; • ‘oxnum’ is a style similar to the standard ‘numeric’, intended for use with numeric in-text citations; • ‘oxalph’ is a style similar to the standard ‘alphabetic’, intended for use with alphabetic in-text citations; • ‘oxyear’ is a style similar to the standard ‘author-year’, intended for use with parenthetical in-text citations. The bundle provides support for a wide variety of content types, including manuscripts, audiovisual resources, social media and legal references.

version	1.1e (2025-04-09)
last changes	2025-04-09
year	2025
description	(no language specified) The package provides an implementation of the bibliography styles of both the AIP and the APS for BibLaTeX. This implementation follows standard BibLaTeX conventions, and can be used simply by loading BibLaTeX with the appropriate option: <pre>\usepackage[style=phys]{biblatex}</pre> A demonstration database is provided to show how to format input for the style. Style options are provided to cover the minor formatting variations between the AIP and APS bibliography styles.

668 biblatex-readbbl – Read a .bbl file created by biber

Web page on CTAN <https://ctan.org/pkg/biblatex-readbbl>

name	biblatex-readbbl
caption	Read a .bbl file created by biber
author	Voß, Herbert
copyright	Herbert Voss (2020)
license	lppl = The LaTeX Project Public License (free)
version	0.01 (2022-01-09)
last changes	2022-01-09
year	2022
description	(no language specified) This small package modifies the biblatex macro which reads a .bbl file created by Biber . It is thus possible to include a .bbl file into the main document with the filecontents environment and send it to a publisher who does not need to run the Biber program. However, when the bibliography changes one has to create a new .bbl file.

672 biblatex-shortfields – Use short forms of fields with BibLaTeX

Web page on CTAN <https://ctan.org/pkg/biblatex-shortfields>

name	biblatex-shortfields
caption	Use short forms of fields with BibLaTeX
author	Rouquette, Maïeul
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0.1
description	(no language specified) The BibLaTeX package provides <code>shortseries</code> and <code>shortjournal</code> field, but the default styles don't use them. It also provides a mechanism to print the equivalence between short forms of fields and long fields (<code>\printbiblist</code>), but this mechanism does not allow to mix between different type of short fields, for example, between short forms of journal title and short forms of series titles. This package provides a solution to these two problems: • If a <code>shortjournal</code> field is defined, it prints it instead of the <code>\journal</code> field. • If a <code>shortseries</code> field is defined, it prints it instead of the <code>\series</code> field. • It provides a <code>\printbibshortfields</code> command to print a list of the sort forms of the fields. • This list also includes the claves defined with the biblatex-claves package version 1.2 or later.

caption	Convert BibLaTeX-generated bibliography to bibitems
author	Avdeev, Nikolai
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.2.2 (2022-01-17)
last changes	2022-01-17
year	2022
description	(no language specified) Some journals accept the reference list only as <code>\bibitems</code>. If you use BibTeX, there is no problem: just paste the content of the <code>.bbl</code> file into your document. However, there was no out-of-the-box way to do the same for biblatex, and you had to struggle with searching appropriate <code>.bst</code> files, or formatting your reference list by hand, or something like that. Using the workaround provided by this package solves the problem.

689 bibleref-mouth – Consistent formatting of Bible references

Web page on CTAN <https://ctan.org/pkg/bibleref-mouth>

name	bibleref-mouth
caption	Consistent formatting of Bible references
author	Parry, Chad
copyright	Chad Parry (2012)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0

description	(no language specified) The package allows Bible references to be formatted in a consistent way. It is similar to the <code>bibleref</code> package, except that the formatting macros are all purely expandable — that is, they are all implemented in TeX’s mouth. This means that they can be used in any expandable context, such as an argument to a <code>\url</code> command.

701 *bibtex* – Process bibliographies (bib files) for LaTeX or other formats

Web page on CTAN <https://ctan.org/pkg/bibtex>

name	bibtex
caption	Process bibliographies (bib files) for LaTeX or other formats
author	Patashnik, Oren
license	knuth = Knuth License (free)
version	0.99e
description	(no language specified) BibTeX allows the user to store his citation data in generic form, while printing citations in a document in the form specified by a BibTeX style, to be specified in the document itself (one often needs a LaTeX citation-style package, such as natbib, as well). BibTeX knows nothing about Unicode sorting algorithms or scripts, although it will pass on whatever bytes it reads. Its descendant bibtexu does support Unicode, via the ICU library. The older alternative bibtex8 supports 8-bit character sets.

Another Unicode-aware alternative is the (independently developed) **biber** program, used with the **BibLaTeX** package to typeset its output.

710 *bibttool* – A tool for manipulating BibTeX files

Web page on CTAN <https://ctan.org/pkg/bibttool>

name	BibTool
caption	A tool for manipulating BibTeX files
author	Neugebauer, Gerd
copyright	Gerd Neugebauer (1995-2019)
license	cc-by-sa-3 = CC BY-SA 3.0 (free)
license	mit = MIT License (free)
license	pd = Public Domain Software (free)
license	gpl2 = GNU General Public License, version 2 (free)
version	2.68
description	(no language specified) Command line manipulation of BibTeX files: • Pretty-printing data bases;

- Syntactic checks with error recovery;
- Semantic checks;
- Sorting and merging of data bases;
- Generation of uniform reference keys according to predefined rules or according to user specification;
- Selecting references used in one publication which are found by analyzing an aux file;
- Controlled rewriting of fields utilising regular expressions to specify the rewriting rules;
- Macro (String) expansion to eliminate the need of extra string definitions;
- Collecting statistics about one or more data bases.

712 *bibtopic* – Include multiple bibliographies in a document

Web page on CTAN <https://ctan.org/pkg/bibtopic>

name	<code>bibtopic</code>
caption	Include multiple bibliographies in a document
author	Ulrich, Stefan
author	Basso, Pierre
license	gpl = GNU General Public License (free)
version	1.1a
description	(no language specified) The package allows the user to include several bibliographies covering different ‘topics’ or bibliographic material into a document (e.g., one bibliography for primary literature and one for secondary literature). The package provides commands to include either all references from a <code>.bib</code> file, only the references actually cited or those not cited in your document. The user has to construct a separate <code>.bib</code> file for each bibliographic ‘topic’, each of which will be processed separately by BibTeX. If you want to have bibliographies specific to one part of a document, see the packages bibunits or chapterbib.

Web page on CTAN <https://ctan.org/pkg/bibunits>

name	<code>bibunits</code>
caption	Multiple bibliographies in one document
author	Fernández, José Alberto
author	Hansen, Thorsten
license	lppl = The LaTeX Project Public License (free)
version	2.2
description	(no language specified) The package provide a mechanism to generate separate bibliographies for different units (chapters, sections or <code>bibunit-environments</code>) of a text. The package separates the citations of each unit of text into a separate file to be processed by BibTeX. The global bibliography section produced by LaTeX may also appear in the document and citations can be placed in both the local unit and the global bibliographies at the same time. The package is compatible with koma-script and with the babel French option <code>frenchb</code>.

715 bibutils – A collection of bibliography format convertorsWeb page on CTAN <https://ctan.org/pkg/bibutils>

name	bibutils
caption	A collection of bibliography format convertors
author	Putnam, Chris
license	gpl = GNU General Public License (free)
version	6.6
description	(no language specified) The bibutils program set interconverts between various bibliography formats using a common MODS-format XML intermediate. For example, one can convert RIS-format files to BibTeX by doing two transformations: RIS->MODS->BibTeX. By using a common intermediate for N formats, only 2N programs are required and not N²-N. These programs operate on the command line and are styled after standard UNIX-like filters. The author reckons to use the tools at the command line, but they are suitable for scripting and have been incorporated into a number of different bibliographic projects.

718 *bibweb* – Automatically retrieve bibliography from MathSciNet

Web page on CTAN <https://ctan.org/pkg/bibweb>

name *bibweb*
caption Automatically retrieve bibliography from MathSciNet
author Palmieri, John H.
license gpl = GNU General Public License (free)
description (no language specified) A utility to automatically retrieve mathematical bibliographical information, in BibTeX format, from the American Mathematical Society's MathSciNet database. More precisely, it acts as a front-end to BibTeX; it converts any citations that BibTeX can't find into queries to the MathSciNet database, it carries out those queries, and returns the answers in BibTeX format. Included in the package are: the perl script *bibweb*, documentation (in various formats), and a test file.
documentation (no language specified) *Package documentation*: <https://ctan.org/tex-archive/biblio/bibtex/utils/bibweb/bibweb.html>

730 bigfoot – Footnotes for critical editions

Web page on CTAN <https://ctan.org/pkg/bigfoot>

name	bigfoot
caption	Footnotes for critical editions
author	Kastrup, David
license	gpl2 = GNU General Public License, version 2 (free)
version	2.1 (2015-08-30)
last changes	2015-08-30
year	2015
description	(no language specified) The package aims to provide a ‘one-stop’ solution to requirements for footnotes. It offers: • Multiple footnote apparatus superior to that of manyfoot • Footnotes can be formatted in separate paragraphs, or be run into a single paragraph (this choice may be selected per footnote series); • Things you might have expected (such as <code>\verb</code>-like material in footnotes, and colour selections over page breaks) now work.

Note that the majority of the bigfoot package’s interface is identical to that of [manyfoot](#); users should seek information from that package’s documentation.

The bigfoot bundle also provides the [perpage](#) and [suffix](#) packages.

739 *binarytree* – Drawing binary trees using TikZ

Web page on CTAN	https://ctan.org/pkg/binarytree
name	binarytree
caption	Drawing binary trees using TikZ
author	Nikolova, Aleksandrina
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.01 (2016-07-25)
last changes	2016-07-25
year	2016
description	(no language specified) This package provides an easy but flexible way to draw binary trees using TikZ. A path specification and the setting of various options determine the style for each edge of the tree. There is support for the external library of TikZ which does not affect externalization of the rest of the TikZ figures in the document. There is an option to use automatic file naming: useful if the trees are often moved around.

743 biocon – Typesetting biological species names

Web page on CTAN <https://ctan.org/pkg/biocon>

name *biocon*

caption Typesetting biological species names

author Edelman, Pieter

license gpl = GNU General Public License (free)

description (no language specified) The *biocon*—biological conventions—package aids the typesetting of some biological conventions.

At the moment, it makes a good job of typesetting species names (and ranks below the species level). A distinction is made between the Plant, Fungi, Animalia and Bacteria kingdoms. There are default settings for the way species names are typeset, but they can be customized. Different default styles are used in different situations.

750 bitelist – Split list, in TeX’s mouth

Web page on CTAN <https://ctan.org/pkg/bitelist>

name	bitelist
caption	Split list, in TeX’s mouth
author	Lück, Uwe
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.1
description	(no language specified) The package provides commands for ”splitting” a token list at the first occurrence of another (specified) token list. I.e., for given token lists s, t return b and the shortest a, such that $t = a s b$. The package’s mechanism differs from those of packages providing similar features, in the following ways: • the method uses TeX’s mechanism of reading delimited macro parameters; • splitting macros work by pure expansion, without assignments; • the operation is carried out in a single macro call. A variant of the operation is provided, that retains outer braces.

765 *blkarray* – Extended array and tabular

Web page on CTAN <https://ctan.org/pkg/blkarray>

name	<code>blkarray</code>
caption	Extended array and tabular
author	Carlisle, David
copyright	David Carlisle (1992, 1999, 2015)
license	lppl = The LaTeX Project Public License (free)
version	0.07
description	(no language specified) An experimental package which implements an environment, <code>blockarray</code>, that may be used in the same way as the <code>array</code> or <code>tabular</code> environments of standard LaTeX, or their extended versions defined in array. If used in math-mode, <code>blockarray</code> acts like <code>array</code>, otherwise it acts like <code>tabular</code>. The package implements a new method of defining column types, and also <code>block</code> and <code>block*</code> environments, for specifying sub-arrays of the main array. What’s more, the <code>\footnote</code> command works inside a <code>blockarray</code>.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/blkarray/blkarray.pdf

775 bm – Access bold symbols in maths mode

Web page on CTAN <https://ctan.org/pkg/bm>

name	bm
caption	Access bold symbols in maths mode
author	Mittelbach, Frank
author	Carlisle, David
author	The LaTeX Project Team
copyright	The LaTeX Project (1993-2023)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.2g (2025-10-21)
last changes	2025-10-21
year	2025

description	(no language specified) The <code>bm</code> package defines a command <code>\bm</code> which makes its argument bold. The argument may be any maths object from a single symbol to an expression. This is closely related to the specification of the <code>\boldsymbol</code> command in AMS-LaTeX, but <code>\bm</code> is rather more careful in the way it does things. The package is part of the latex-tools bundle in the LaTeX required distribution.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/required/tools/bm.pdf
– local file	<code>./2289272673-bm.pdf</code>

780 bmpsize – Extract size and resolution data from bitmap files

Web page on CTAN <https://ctan.org/pkg/bmpsize>

name	bmpsize
caption	Extract size and resolution data from bitmap files
author	Oberdiek, Heiko
copyright	Heiko Oberdiek (2006-2009)
copyright	Oberdiek Package Support Group (2016-2019)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.8 (2019-12-29)
last changes	2019-12-29
year	2019
description	(no language specified) This package analyzes bitmap images to extract size and resolution data. It adds this feature to the graphics package so it is no longer necessary to provide a separate bounding box files for bitmap images. Additionally the implementation for the inclusion of bitmap images in some drivers of package graphicx are rewritten to support options viewport, trim and clip. The package requires pdfTeX version 1.30.0 or later (the relevant pdfTeX primitive operates in both DVI and PDF output modes). The package is part of the oberdiek bundle.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/oberdiek/bmpsize.pdf

794 bondgraphs – Draws bond graphs in LaTeX, using PGF/TikZ

Web page on CTAN <https://ctan.org/pkg/bondgraphs>

name	bondgraphs
caption	Draws bond graphs in LaTeX, using PGF/TikZ
author	Folkertsma, Geert
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0.1 (2015-03-23)
last changes	2015-03-23
year	2015

description	(no language specified) The package is used to draw bond graphs in LaTeX. It uses a recent version (3.0+) of PGF and TikZ for the drawing, hence, it is mainly a set of TikZ styles that makes the drawing of bond graphs easier. Compared to the bondgraph package this package relies more on TikZ styles and less on macros, to generate the drawings. As such it can be more flexible than his, but requires more TikZ knowledge of the user.

810 booktabstabular – Automatic application of the booktabs style

Web page on CTAN <https://ctan.org/pkg/booktabstabular>

name	booktabstabular
caption	Automatic application of the booktabs style
author	Schäfer, Moritz R.
copyright	Moritz R. Schäfer (2026)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0.0
description	(no language specified) The booktabstabular package provides wrapper environments around <code>tabular</code> and <code>tabular*</code> that insert <code>\toprule</code> at the beginning, <code>\bottomrule</code> at the end, and locally remap the legacy <code>\hline</code> and <code>\cline</code> commands to their booktabs equivalents <code>\midrule</code> and <code>\cmidrule</code> . It also provides commands to temporarily override the standard <code>tabular</code> and <code>tabular*</code> environments so that existing documents can opt into this behaviour without rewriting each table.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/booktabstabular/README
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/booktabstabular/booktabstabular.pdf

811 boolexpr – A boolean expression evaluator and a switch command

Web page on CTAN <https://ctan.org/pkg/boolexpr>

name boolexpr
 caption A boolean expression evaluator and a switch command
 author Chervet, Florent
 copyright Florent Chervet (2009)
 license lpl = The LaTeX Project Public License (free)
 version 3.14
 description (no language specified) The `\boolexpr` macro evaluates boolean expressions in a purely expandable way.

`\boolexpr{ A \OR B \AND C }` expands to 0 if the logical expression is TRUE. A, B, C may be: numeric expressions such as: `x=y`, `x<>y`, `x>y` or `x<y`;

– boolean switches: `\iftrue 0\else 1\fi`;

– conditionals: `\ifcsname whatsit\endcsname 0\else 1\fi`;

– another `\boolexpr`: `\boolexpr{ D \OR E \AND F }`;

`\boolexpr` may be used with `\ifcase`:

```
\ifcase\boolexpr{ A \OR B \AND C }
What to do if true
\else
What to do if false
\fi
```

The `\switch` command (which is also expandable) has the form:

```
\switch
\case{<boolean expression>} ...
\case{<boolean expression>} ...
...
\otherwise ...
\endswitch
```

documentation (no language specified) *Package documentation*: <https://ctan.org/tex-archive/macros/latex/contrib/boolexpr/boolexpr.pdf>

815 borceux – Diagram macros by François BorceuxWeb page on CTAN <https://ctan.org/pkg/borceux>

name	borceux
caption	Diagram macros by François Borceux
author	Borceux, François
copyright	François Borceux (1993)
license	other-free = Free license not otherwise listed (free)
version	(2011-01-12)
last changes	2011-01-12
year	2011
description	(no language specified) The macros support the construction of diagrams, such as those that appear in category theory texts. The user gives the list of vertices and arrows to be included, just as when composing a matrix, and the program takes care of computing the dimensions of the arrows and realizing the pagesetting. All the user has to do about the arrows is to specify their type (monomorphism, pair of adjoint arrows, etc.) and their direction (north, south-east, etc.); 12 types and 32 directions are available.

821 boxhandler – Flexible Captioning and Deferred Box/List Printing

Web page on CTAN <https://ctan.org/pkg/boxhandler>

name	boxhandler
caption	Flexible Captioning and Deferred Box/List Printing
author	Segletes, Steven B.
copyright	Steven B. Segletes (2008)
license	lppl = The LaTeX Project Public License (free)
version	1.30
description	(no language specified) The package allows the user to optimise presentation of LaTeX tables and figures. Boxhandler will lay out table and figure captions with a variety of stylistic appearances, and will also allow figures and tables to be "wrapped" in a manner consistent with many business and government documents. For a document that might appear in different venues with different formatting, boxhandler permits the creation of a LaTeX source document that can, with a single-line change in the source code, produce an output that has very different layout from the baseline configuration, not only in terms of caption style, but more importantly in terms of the locations where figures, tables and lists appear (or not) in the document. Deferral routines also allow one to keep all figure and table data in a separate source file, while nonetheless producing a document with figures and tables appearing in the desired location.

837 breakurl – Line-breakable \url-like links in hyperref when compiling via dvips/ps2pdf

Web page on CTAN	https://ctan.org/pkg/breakurl
name	breakurl
caption	Line-breakable \url-like links in hyperref when compiling via dvips/ps2pdf
author	Neto, Vilar da Camara
copyright	Vilar da Camara Neto (2005-2009)
license	lppl = The LaTeX Project Public License (free)
version	1.40
description	(no language specified) This package provides a command much like hyperref's <code>\url</code> that typesets a URL using a typewriter-like font. However, if the dvips driver is being used, the original <code>\url</code> doesn't allow line breaks in the middle of the created link: the link comes in one atomic piece. This package allows such line breaks in the generated links.

839 breqn – Automatic line breaking of displayed equations

Web page on CTAN <https://ctan.org/pkg/breqn>

name	breqn
caption	Automatic line breaking of displayed equations
author	Robertson, Will
author	Madsen, Lars
author	Wright, Joseph
author	Høgholm, Morten
author	Downes, Michael J.
copyright	Michael J. Downes (1997-2003)
copyright	Morten Høgholm (2007-2008)
copyright	Will Robertson (2007-2020)
copyright	Ulrike Fischer (2020)
copyright	Lars Madsen (2007-2014)
copyright	Joseph Wright (2010-2017)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.98l (2021-10-28)
last changes	2021-10-28
year	2021
description	(no language specified) The package provides solutions to a number of common difficulties in writing displayed equations and getting high-quality output. For example, it is a well-known inconvenience that if an equation must be broken into more than one line, ‘left...right’ constructs cannot span lines. The breqn package makes them work as one would expect whether or not there is an intervening line break. The single most ambitious goal of the package, however, is to support automatic linebreaking of displayed equations. Such linebreaking cannot be done without substantial changes under the hood in the way formulae are processed; the code must be watched carefully, keeping an eye on possible glitches. The bundle also contains the flexisym and mathstyle packages, which are both designated as support for breqn.

855 `bundledoc` – **Bundle together all the files needed to build a LaTeX document**

Web page on CTAN	https://ctan.org/pkg/bundledoc
name	<code>bundledoc</code>
caption	Bundle together all the files needed to build a LaTeX document
author	Pakin, Scott
copyright	Scott Pakin (2018-2025)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	3.5 (2025-02-26)
last changes	2025-02-26
year	2025

description	(no language specified) The <code>bundledoc</code> package is a post-processor for the <code>snapshot</code> package that bundles together all the classes, packages and files needed to build a given LaTeX document. It reads the <code>.dep</code> file that <code>snapshot</code> produces, finds each of the files mentioned therein, and archives them into a single <code>.tar.gz</code> (or <code>.zip</code>, or whatever) file, suitable for moving across systems, transmitting to a colleague, etc. A script, <code>arlatex</code>, provides an alternative "archiving" mechanism, creating a single LaTeX file that contains all of the ancillary files of a LaTeX document, together with the document itself, using the <code>filecontents*</code> environment.
documentation	(no language specified) <i>Arlatex documentation</i> : https://ctan.org/tex-archive/support/bundledoc/arlatex.pdf

license	lgpl = GNU Lesser General Public License (free)
version	1.2 (2018-08-15)
last changes	2018-08-15
year	2018
description	(no language specified) What happens when you give your visiting card to someone? Either they manually type the text into their computer or mobile phone, or it will end up in a box and be forgotten. Nowadays data is required electronically, not on paper. Here is the solution: A visiting card with QR-Code that contains a full vcard so that it can be scanned with an app on the mobile phone and thereby automatically imported into the electronic contacts. This also works well when you are offline and bluetooth transfer fails. So here is the highly configurable business card or visiting card with full vcard as QR-Code, ready to send to online printers. You can specify the exact size of the paper and the content within the paper, including generation of crop marks. The package depends on the following other LaTeX packages: calc , crop , DejaVuSans , etoolbox , fontawesome , fontenc , geometry , kvoptions , marvosym , qrcode , varwidth , and wrapfig . The package needs XeLaTeX for working properly.

860 *bussproofs* – Proof trees in the style of the sequent calculus

Web page on CTAN	https://ctan.org/pkg/bussproofs
name	<code>bussproofs</code>
caption	Proof trees in the style of the sequent calculus
author	Buss, Sam
copyright	Samuel R. Buss (1994-1996, 2004-2006)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.1
description	(no language specified) The package allows the construction of proof trees in the style of the sequent calculus and many other proof systems. One novel feature of the macros is they support the horizontal alignment according to some centre point specified with the command <code>\fCenter</code>. This is the style often used in sequent calculus proofs. The package works in a Plain TeX document, as well as in LaTeX; an exposition of the commands available is given in the package file itself.

866 *bxcoloremoji* – Use color emojis more conveniently

Web page on CTAN <https://ctan.org/pkg/bxcoloremoji>

name	bxcoloremoji
caption	Use color emojis more conveniently
author	Yato, Takayuki
copyright	Takayuki YATO (aka. “ZR”) (2017-2024)
license	mit = MIT License (free)
version	1.0a
description	(no language specified) This package lets users output color emojis in LaTeX documents. Compared to other packages with similar functionality, this package has the following merits: • It supports all major LaTeX engines. • Emojis can be entered as the characters themselves, as their Unicode code values, or as their short names. • It works reasonably well in PDF strings when using hyperref. • Emojis can be handled properly even in Japanese typesetting environments.

This package has been widely used among the Japanese LaTeX community, but there are already many emoji packages on CTAN and in TeX Live. To avoid uploading a large amount of emoji image data that are essentially identical, the package was revised in version 1.0 so that the image output was delegated to the twemojis package. Therefore, this package now contains no image data.

890 c2latex – Simple conversion of C programs to LaTeXWeb page on CTAN <https://ctan.org/pkg/c2latex>

name	c2latex
caption	Simple conversion of C programs to LaTeX
author	Ramsdell, John D
copyright	John D. Ramsdell (1991)
license	other-free = Free license not otherwise listed (free)
version	1.1
description	(no language specified) c2latex provides simple support for documentation of C programming. Given a C source file in which the comments have been written in LaTeX, c2latex converts the C source file into a LaTeX source file. It can be used to produce typeset listings of C programs and/or documentation associated with the program. The C source given to c2latex usually has the following form: It starts with a large comment containing LaTeX commands that start a document along with any initial text. Then there is a sequence of comment and code pairs, with the

comment explaining the code to follow. The source file is ended by a comment containing LaTeX commands that finish the document. The source of c2latex is distributed in this form.

891 *cabin* – A humanist Sans Serif font, with LaTeX support

Web page on CTAN <https://ctan.org/pkg/cabin>

name `cabin`
 caption A humanist Sans Serif font, with LaTeX support
 author Tennent, Bob
 license ofl = The SIL Open Font License (free)
 license lppl = The LaTeX Project Public License (free)
 version (2023-09-25)
 last changes 2023-09-25
 year 2023
 description (no language specified) Cabin is a humanist sans with four weights and true italics and small capitals. According to the designer, Pablo Impallari, Cabin was inspired by Edward Johnston's and Eric Gill's typefaces, with a touch of modernism. Cabin incorporates modern proportions, optical adjustments, and some elements of the geometric sans.

`cabin.sty` supports use of the font under LaTeX, pdfLaTeX, XeLaTeX and LuaLaTeX; it uses the `mweights`, to manage the user's view of all those font weights.

 An `sfdefault` option is provided to enable Cabin as the default text font. The `fontaxes` package is required for use with [pdf]LaTeX.

893 caesarcm – Hyphenation of inflected languages, using CM fonts

Web page on CTAN	https://ctan.org/pkg/caesarcm
name	caesarcm
caption	Hyphenation of inflected languages, using CM fonts
author	Siebenmann, Laurent
license	noinfo = noinfo
version	2
description	(no language specified) In the period between the definition (in 1990) of the Cork font encoding (now known to LaTeX users as the T1 encoding), and availability of extended versions of the Computer Modern fonts, various partially-extended versions were briefly available. These macros provided a means of using the extensions, pending the availability of the real ‘thing’. The package should be regarded as ‘obsolete’.

895 *cahyph* – Hyphenation patterns for the Catalan language

Web page on CTAN <https://ctan.org/pkg/cahyph>

name	cahyph
caption	Hyphenation patterns for the Catalan language
author	Badenes Guia, Gonçal
author	Turon, Francina
copyright	Gonçal Badenes (1991-2003)
license	lppl = The LaTeX Project Public License (free)
version	1.11
description	(no language specified) The macros used were created for ghyph31.tex by Bernd Raichle (see the German hyphenation pattern files for further details); the patterns were created using standard, conservative hyphenation rules for Catalan. The results were then refined by running them through <code>patgen</code>, which increased the number of hits. The results were checked against "Diccionari Ortogràfic i de Pronúncia, Enciclopèdia Catalana"; no incorrect results were detected, and misses amounted to less than 1%. For Catalan, both <code>\lefthyphenmn</code> and <code>\righthyphenmin</code> should be set to 2.

901 calculation – Typesetting reasoned calculations, also called calculational proofs

Web page on CTAN <https://ctan.org/pkg/calculation>

name	calculation
caption	Typesetting reasoned calculations, also called calculational proofs
author	Fokkinga, Maarten
copyright	Maarten Fokkinga (2014-2015)

license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0
description	(no language specified) The <code>calculation</code> environment formats reasoned calculations, also called calculational proofs. The notion of reasoned calculations or calculational proofs was originally advocated by Wim Feijen and Edsger Dijkstra. The package accepts options <code>fleqn</code> and <code>leqno</code> (with the same effect as the LaTeX options <code>fleqn</code> and <code>leqno</code>, or may inherit the options from the document class). It allows steps and expressions to be numbered (by LaTeX equation numbers, obeying the LaTeX <code>\label</code> command to refer to these numbers), and a step doesn't take vertical space if its hint is empty. An expression in a calculation can be given a comment; it is placed at the side opposite to the equation numbers. Calculations are allowed inside hints although numbering and commenting is then disabled.

923 *captcont* – Retain float number across several floats

Web page on CTAN <https://ctan.org/pkg/captcont>

name	<code>captcont</code>
caption	Retain float number across several floats
author	Cochran, Steven Douglas
copyright	Steven Douglas Cochran (1996-2002)
license	lppl = The LaTeX Project Public License (free)
version	2.0
description	(no language specified) The <code>captcont</code> package provides the ability to continue the numbering in your float environment (<code>figure</code>, <code>table</code>, etc.) with minimal overhead. This package adds three commands: <code>\caption*</code>, <code>\captcont</code>, and <code>\captcont*</code>. Along with the <code>\caption</code> command, these give full control over the caption numbering, caption text and the entries in the list-of pages. The <code>\caption</code> and <code>\captcont</code> commands generate list-of page entries. The <code>\caption</code> and <code>\caption*</code> commands increment the figure or table counter.

Captcont also fully supports the **subfigure** package.

documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/captcont/captcont.pdf

924 *captdef* – Declare free-standing \caption commands

Web page on CTAN	https://ctan.org/pkg/captdef
name	<code>captdef</code>
caption	Declare free-standing \caption commands
author	Fairbairns, Robin
author	Carlisle, David
license	lppl = The LaTeX Project Public License (free)
description	(no language specified) The <code>\DeclareCaption</code> command defines a class of caption command associated with the counter specified to the command. These commands are free-standing (i.e., don't need to be inside a float environment). The package uses <code>\DeclareCaption</code> to define <code>\figcaption</code> and <code>\tabcaption</code> , which can be used outside figure or table environments.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/captdef/captdef.pdf

925 *caption* – Customising captions in floating environments

Web page on CTAN <https://ctan.org/pkg/caption>

name	<code>caption</code>
caption	Customising captions in floating environments
author	Sommerfeldt, Axel
copyright	Axel Sommerfeldt (1994-2023)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	(2023-09-08)
last changes	2023-09-08
year	2023
description	(no language specified) The <code>caption</code> package provides many ways to customise the captions in floating environments like figure and table, and cooperates with many other packages. Facilities include rotating captions, sideways captions, continued captions (for tables or figures that come in several parts). A list of compatibility notes, for other packages, is provided in the documentation. The package also provides the "caption outside float" facility, in the same way that simpler packages like <code>capt-of</code> do. The package supersedes <code>caption2</code>.

935 cartonaugh – A LuaLaTeX package for drawing karnaugh maps with up to 6 variables

Web page on CTAN <https://ctan.org/pkg/cartonaugh>

name	cartonaugh
caption	A LuaLaTeX package for drawing karnaugh maps with up to 6 variables
author	Bouajjaj, Jamal
copyright	Jamal Bouajjaj (2021)
copyright	Mattias Jacobsson et al. (2015-2017)
license	cc-by-sa-3 = CC BY-SA 3.0 (free)
version	1.0 (2021-07-15)
last changes	2021-07-15

year	2021
description	(no language specified) This package, a fork of 2pi's karnaugh-map package, draws karnaugh maps with 2, 3, 4, 5, and 6 variables. It also contains commands for filling the karnaugh map with terms semi-automatically or manually. Last but not least it contains commands for drawing implicants on top of the map. The name "cartonaugh" is a portmanteau of "cartographer" and "karnaugh". The package needs LuaLaTeX and depends on TikZ , xparse , and xstring .

956 *catoptions* – Preserving and recalling standard catcodes

Web page on CTAN <https://ctan.org/pkg/catoptions>

name	<code>catoptions</code>
caption	Preserving and recalling standard catcodes
author	Carlisle, David
author	Musa, Ahmed
copyright	Ahmed Musa (amusa22@gmail.com), David Carlisle (2023)
copyright	Ahmed Musa (amusa22@gmail.com) (2010-2012)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.2.7i

description	(no language specified) The package changes package loading internals so that all subsequently loaded packages can rely on normal/standard catcodes of all ASCII characters. The package defines canonical control sequences to represent all the visible ASCII characters. It also provides robust option parsing mechanisms (<code>XDeclareOption</code> , <code>XExecuteOptions</code> and <code>XProcessOptions</code> , which will be used by <code>\documentclass</code> if the package has already been loaded). The package also provides a range of other TeX programming tools.

969 ccool – A key-value document command parser

Web page on CTAN	https://ctan.org/pkg/ccool
name	ccool
caption	A key-value document command parser
author	Rogard, Erwann
copyright	Erwann Rogard (2020)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	3.2
description	(no language specified) This package provides a key-value interface, <code>\Ccool</code> , on top of <code>xparse</code> 's document command parser. Global options control input processing and its expansion. By default, they are set to meet likely requirements, depending on context: the selected language, and which of text and math mode is active. These options can be overridden inline. This versatility could find its use, for example, to encode notational conventions (such as $\mathbb{R} \rightarrow \text{Real}$) at the point where they are introduced in the document ("Let $\mathbb{R}$ denote real numbers"). Polymorphic commands can be generated by parameterizing the keys (for instance, one parameter value for style, another for a property). User input to <code>\Ccool</code> can optionally be serialized. This can be useful for typesetting documents sharing the same notation.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/ccool/ccool.pdf

974 *cdpbundl* – Business letters in the Italian style

Web page on CTAN <https://ctan.org/pkg/cdpbundl>

name	C.D.P. Bundle
caption	Business letters in the Italian style
author	Mezzetti, Gustavo
copyright	Gustavo Mezzetti (1999-2015)
license	lppl = The LaTeX Project Public License (free)
version	0.36d (2018-02-08)
last changes	2018-02-08
year	2018

description	(no language specified) The C.D.P. Bundle can be used to typeset high-quality business letters formatted according to Italian style conventions. It is highly configurable, and its modular structure provides you with building blocks of increasing level, by means of which you can compose a large variety of letters. It is also possible to write letters divided into sections and paragraphs, to include floating figures and tables, and to have the relevant indexes compiled automatically. A single input file can contain several letters, and each letter will have its own table of contents, etc., independent from the other ones.

978 *cellspace* – Ensure minimal spacing of table cells

Web page on CTAN <https://ctan.org/pkg/cellspace>

name	cellspace
caption	Ensure minimal spacing of table cells
author	Noirel, Josselin
copyright	Josselin Noirel (2006-2026)
license	lppl = The LaTeX Project Public License (free)
version	1.9.1a (2026-01-24)
last changes	2026-01-24
year	2026
description	(no language specified) It is well known that high or deep cells tend to touch the <code>\hline</code>s of a <code>tabular</code>. This package provides a modifier <code>S</code> acting on usual column types so that to ensure a minimal distance that can be controlled through two parameters <code>\cellspacetoplimit</code> and <code>\cellspacebottomlimit</code>. The approach employed by this package is noticeably simpler than that of <code>tabls</code>, which considers the dimensions of each entire row; whereas you can ask the <code>cellspace</code> only to look at the cells of potentially difficult columns. The package depends on <code>ifthen</code>, <code>array</code>, <code>calc</code>, and <code>xkeyval</code>.

last access	2025-02-07

990 *cfr-lm* – Enhanced support for the Latin Modern fonts

Web page on CTAN <https://ctan.org/pkg/cfr-lm>

name	cfr-lm
caption	Enhanced support for the Latin Modern fonts
author	Rees, Clea F.
copyright	Clea F. Rees (2008-2025)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.8 (2025-02-03)
last changes	2025-02-03
year	2025
description	(no language specified) The package supports a number of features of the Latin Modern fonts which are not easily accessible via the default (La)TeX support provided in the official distribution. In particular, the package supports the use of the various styles of digits available, small-caps and upright italic shapes, and alternative weights and widths. It also supports variable width typewriter and the "quotation" font. Version 2.004 of the Latin Modern fonts is supported. By default, the package uses proportional oldstyle digits and variable width typewriter but this can be changed by passing appropriate options to the package. The package also supports using (for example) different styles of digits within a document so it is possible to use proportional oldstyle digits by default, say, but tabular lining digits within a particular table. The package requires the official Latin Modern distribution, including its (La)TeX support. The package relies on the availability of both the fonts themselves and the official font support files. The package also makes use of the nfssexst-cfr package.

Only the T1 and TS1 encodings are supported for text fonts. The set up of fonts for mathematics is identical to that provided by Latin Modern.

991 `chalk-annotate` – Chalk-textured annotations for Beamer presentations

Web page on CTAN <https://ctan.org/pkg/chalk-annotate>

name	<code>chalk-annotate</code>
caption	Chalk-textured annotations for Beamer presentations
author	Zhang, Zitong
copyright	Zhang Zitong (2026)
license	mit = MIT License (free)
version	1.1 (2026-04-25)
last changes	2026-04-25
year	2026

description	(no language specified) This package provides pre-rendered PNG overlays with natural chalk grain and opacity variation for emphasizing text and other content in Beamer slides. It offers six annotation styles: ellipse, underline, box with fill and border, arrow, and strikethrough. Each style is available in five colors: red, blue, green, orange, and purple. The resulting annotations look more realistic than pure TikZ decorations. The package works with XeLaTeX and LuaLaTeX.

996 *changes* – Manual change markup

Web page on CTAN <https://ctan.org/pkg/changes>

name	changes
caption	Manual change markup
author	Kleinod, Ekkart
copyright	Ekkart Kleinod (2007-2021)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	4.2.1 (2021-07-15)
last changes	2021-07-15
year	2021
description	(no language specified) The package allows the user to manually markup changes of text, such as additions, deletions, or replacements. Changed text is shown in a different color; deleted text is striked out. Additionally, text can be highlighted and/or commented. The package allows free definition of additional authors and their associated color. It also allows you to change the markup of changes, authors, highlights or comments. A Python script is provided for removing the changes.

1000 **chapterfolder** – Package for working with complicated folder structures

Web page on CTAN <https://ctan.org/pkg/chapterfolder>

name	chapterfolder
caption	Package for working with complicated folder structures
author	Mathieu, Boretti
copyright	Mathieu Boretti (2003-2005)
license	lppl = The LaTeX Project Public License (free)
version	2.0.1
description	(no language specified) This package simplifies working with folder structures that match the chapter/section/subsection structure. It provides macros to define a folder that contains the file for a chapter/section/subsection, and provides macros that allow inclusion without using the full path, rather the path relative to the current folder of the chapter/section/subsection. It makes easy changing the name of a folder, for example.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/chapterfolder/chapterfolder.pdf

keyword	<code>debug-supp</code> (support for package or document debugging)
language(s)	no language specified
last access	2025-02-07

1010 `checkend` – Extend “improperly closed environment” messages

Web page on CTAN <https://ctan.org/pkg/checkend>

name	<code>checkend</code>
caption	Extend “improperly closed environment” messages
author	Bezos López, Javier
copyright	Javier Bezos (2002-2019)
license	mit = MIT License (free)
version	1.0
description	(no language specified) When an environment is left open, LaTeX gives an error at the end of the document. However it only informs about the first of them, while the rest are shown with meaningless errors:

```
(\end occurred inside a group at level N)
```

This package replaces these errors with more useful messages which show which environments (in reverse order) were not closed. There are no user macros: just use the package.

1011 *checklab* – A patch for the label-checking code

documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/checkend/README.md

1017 chemcompounds – Simple consecutive numbering of chemical compoundsWeb page on CTAN <https://ctan.org/pkg/chemcompounds>

name	chemcompounds
caption	Simple consecutive numbering of chemical compounds
author	Schenk, Stephan
copyright	Stephan Schenk (2005)
license	lppl = The LaTeX Project Public License (free)
description	(no language specified) The chemcompounds package allows for a simple consecutive numbering of chemical compounds. Optionally, it is possible to supply a custom name for each compound. The package differs from the chemcono package by not generating an odd-looking list of compounds inside the text.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/chemcompounds/chemcompounds.pdf

1018 chemcono – Support for compound numbers in chemistry documentsWeb page on CTAN <https://ctan.org/pkg/chemcono>

name	chemcono
caption	Support for compound numbers in chemistry documents
author	Schulz, Stefan
license	lppl = The LaTeX Project Public License (free)
version	1.3

description	(no language specified) A LaTeX package for using compound numbers in chemistry documents. It works like <code>\cite</code> and the <code>\thebibliography</code> , using <code>\fcite</code> and <code>\theffbibliography</code> instead. It allows compound names in documents to be numbered and does not affect the normal citation routines.

1020 *chemfig* – Draw molecules with easy syntax

Web page on CTAN <https://ctan.org/pkg/chemfig>

name	chemfig
caption	Draw molecules with easy syntax
author	Tellechea, Christian
copyright	Christian Tellechea (2010-2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.71
description	(no language specified) The package provides the command <code>\chemfig{<code>}</code>, which draws molecules using the TikZ package. The <code><code></code> argument provides instructions for the drawing operation. While the diagrams produced are essentially 2-dimensional, the package supports many of the conventional notations for illustrating the 3-dimensional layout of a molecule. The package uses TikZ for its actual drawing operations.

name	chemmacros
caption	A collection of macros to support typesetting chemistry documents
author	Niederberger, Clemens
copyright	Clemens Niederberger and Sonja K. (2022)
copyright	Clemens Niederberger (2011-2021)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	6.2a
description	(no language specified) The bundle offers a collection of macros and commands which are intended to make typesetting chemistry documents faster and more convenient. Coverage includes some nomenclature commands, oxidation numbers, thermodynamic data, newman projections, etc.

The package relies on the following supporting packages:

- [chemformula](#) , providing a command for typesetting chemical formulae and reactions (doing a similar task to that of [mhchem](#));
- [chemgreek](#) , offering support for use of greek letters; and
- [ghsystem](#) , providing for the UN globally harmonised chemical notation.

The packages are written using current versions of the [experimental LaTeX 3 coding conventions](#) and the [LaTeX 3 support packages](#) .

1027 *chempid* – Draw Piping and Instrumentation diagrams using TikZ via PGF

Web page on CTAN <https://ctan.org/pkg/chempid>

name	<code>chempid</code>
caption	Draw Piping and Instrumentation diagrams using TikZ via PGF
author	Raike, Roel
copyright	Roel Raike (2024)

license	mit = MIT License (free)
version	1.0.1
description	(no language specified) A humble LaTeX package that allows you to draw Piping and Instrumentation Diagrams (P&ID) or block diagrams quickly and efficiently. It contains pre-built assets in PGF to create P&ID drawings. We noticed that, with the diminishing compile time on Overleaf, it became increasingly difficult to use TikZ to this end. Therefore, we chose for PGF because it is faster to compile than TikZ objects. The objects themselves have been made in accordance with the ISO 10628-2 standard.

author	Wright, Joseph
copyright	Joseph Wright (2006-2011, 2013)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.0m

description	(no language specified) Chemstyle has been developed as a successor to the LaTeX package provided by the rsc bundle. The package provides an extensible system for formatting chemistry documents according to the conventions of a number of leading journals. It also provides some handy chemistry-related macros. Chemstyle is much enhanced compared to its predecessor, and users of rsc are strongly encouraged to migrate (all of the additional macros in the rsc LaTeX package are present in chemstyle). The package chemscheme is distributed with chemstyle; chemstyle itself incorporates ideas that come from the trivfloat package; the documentation uses the auto-pst-pdf package.

1036 cheq – Adobe chess font

Web page on CTAN	https://ctan.org/pkg/cheq
name	cheq
caption	Adobe chess font
author	Renner, John
license	nosell = Do Not Sell Except by Arrangement (not free)
description	(no language specified) The font itself is presented as Macintosh stuffit (both in ‘printer’ and ‘screen’ formats), and (for some reason) as a .ps file, which from the documentation sounds as if it ought to be a .pfa file. Metrics (both AFM and TeX .pl files), and a simple package for generating images of pieces, are provided.
documentation	(no language specified) <i>Readme (partly marked-up for TeX use)</i> : https://ctan.org/tex-archive/fonts/chess/cheq/00readme.txt
on CTAN	https://ctan.org/tex-archive/fonts/chess/cheq
keyword	font (fonts themselves)
keyword	font-chess (fonts for typesetting chess problems and diagrams)
keyword	font-abnormal (font in an irregular format)
language(s)	no language specified
year	without year

1037 *cherokee* – A font for the Cherokee scriptWeb page on CTAN <https://ctan.org/pkg/cherokee>

name	cherokee
caption	A font for the Cherokee script
author	Stanier, Alan
copyright	Alan Stanier (1994)
license	other-free = Free license not otherwise listed (free)
version	(2011-01-11)
last changes	2011-01-11
year	2011
description	(no language specified) The Cherokee script was designed in 1821 by Segwoya. The alphabet is essentially syllabic, only 6 characters (a e i o s u) correspond to Roman letters: the font encodes these to the corresponding roman letter. The remaining 79 characters have been arbitrarily encoded in the range 38–122; the <i>cherokee</i> package provides commands that map each such syllable to the appropriate character; for example, Segwoya himself would be represented <code>\Cse\Cgwo\Cya</code>. The font is distributed as Metafont source; it works very poorly in modern environments, and could do with expert attention (if you are interested, please contact the CTAN team for details).
documentation	(no language specified) <i>Readme</i>: https://ctan.org/tex-archive/fonts/cherokee/README
on CTAN	https://ctan.org/tex-archive/fonts/cherokee

1040 chessboard – Print chess boards

Web page on CTAN <https://ctan.org/pkg/chessboard>

name	chessboard
caption	Print chess boards
author	Fischer, Ulrike
copyright	Ulrike Fischer (2006-2019)
license	lppl = The LaTeX Project Public License (free)
version	2.0 (2024-11-07)
last changes	2024-11-07
year	2024
description	(no language specified) This package offers commands to print chessboards. It can print partial boards, hide pieces and fields, color the boards and put various marks on the board. It has a lot of options to place pieces on the board. Using exotic pieces (e.g., for fairy chess) is possible. The documentation includes an example of an animated chessboard, for those whose PDF viewer can display animations.

1041 chessfss – A package to handle chess fonts

Web page on CTAN	https://ctan.org/pkg/chessfss
name	chessfss
caption	A package to handle chess fonts
author	Fischer, Ulrike
copyright	Ulrike Fischer (2005, 2006)
license	lppl = The LaTeX Project Public License (free)
version	1.2a
description	(no language specified) This package offers commands to use and switch between chess fonts. It uses the LaTeX font selection scheme (nfss). The package doesn't parse, format and print PGN input like e.g. the packages <i>skak</i> or <i>texmate</i>; the aim of the package is to offer writers of chess packages a bundle of commands for fonts, so that they don't have to implement all these commands for themselves. A normal user can use the package to print e.g. single chess symbols and simple diagrams. The documentation contains also a section about installation of chess fonts.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/chessfss/chessfss.pdf

1068 chroma – Chroma: a reference book of LaTeX colours

Web page on CTAN <https://ctan.org/pkg/chroma>

name	chroma
caption	Chroma: a reference book of LaTeX colours
author	Kern, Uwe
license	nosource = No Source Available (not free)
version	1.00

description	(no language specified) This reference book presents several lists of colours and their respective parameters in a number of colour models. The lists are constructed either by parameters or by name. ‘Colours by parameters’ displays systematic series of colours, based on 3-tuples of numbers that are interpreted as colour parameters in the ‘rgb’, ‘cmy’, and ‘hsb’ colour models. ‘Colours by name’ displays sets of colours that have been given specific names such that LaTeX users do not have to care about their parametrisation. However, as soon as there is the intention to use these colours outside the LaTeX world (e.g., website construction or drawing programs), the parameters suddenly gain importance. For each colour name, we display: • the colour itself plus the name of the underlying model, • a 50%-tint (mixture with ‘white’), • a 50%-tone (mixture with ‘gray’), • a 50%-shade (mixture with ‘black’), and • the complementary colour. Additionally, for the base colours defined by the xcolor package, also all 50%-mixes of base colour pairs are included.

1070 *chronos* – TikZ-based package for drawing customisable timelines with support for colour schemes, styles and memoizationWeb page on CTAN <https://ctan.org/pkg/chronos>

name	chronos
caption	TikZ-based package for drawing customisable timelines with support for colour schemes, styles and memoization
author	Rees, Clea F.
copyright	Clea F. Rees (2023-2026)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.9.4 (2026-03-21)
last changes	2026-03-21
year	2026
description	(no language specified) The package supports drawing timelines and aims to be highly customisable. Extensive configuration options are offered via a standard key-value interface based on pgfkeys. Custom colour schemes and styles are supported, and the package includes documented examples of each. Memoization works out-of-the-box if the memoize package is loaded. The code was developed as a result of questions concerning difficulties in customising the output of existing packages for drawing timelines, which sometimes eschew pgfkeys and are often challenging to configure, even when based on PGF/TikZ.

1072 chs-physics-report – Physics lab reports for Carmel High School

Web page on CTAN <https://ctan.org/pkg/chs-physics-report>

name	chs-physics-report
caption	Physics lab reports for Carmel High School
author	Zhang, Gary
license	pd = Public Domain Software (free)
license	cc-by-sa-3 = CC BY-SA 3.0 (free)
version	(2017-11-23)
last changes	2017-11-23
year	2017
description	(no language specified) This package may optionally be used by students at Carmel High School in Indiana in the United States to write physics lab reports for FW physics courses. As many students are beginners at LaTeX, it also attempts to simplify the report-writing process by offering macros for commonly used notation and by automatically formatting the documents for students who will only use TeX for mathematics and not typesetting. The package depends on amsmath , calc , fancyhdr , geometry , graphicx , letltxmacro , titlesec , transparent , and xcolor .
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/chs-physics-report/README.txt

last access	2026-04-21

1077 cid – Fonts defined by character identifier

Web page on CTAN <https://ctan.org/pkg/cid>

name	<code>cid</code>
caption	Fonts defined by character identifier
description	(no language specified) CID-keyed fonts were developed by Adobe to handle character sets containing large numbers of glyphs, notably for East Asian languages (Chinese, Japanese, Korean, etc.). The glyphs are addressed by number rather than name, and organized into so-called collections. Several of Adobe’s CID mapping files are distributed as part of ConTeXt. In TeX Live, they are in the directory <code>texmf-dist/fonts/cid</code>. See the Wikipedia entry, among other places, for more information.
keyword	<code>font</code> (fonts themselves)

1084 *circuit-macros* – M4 macros for electric circuit diagrams

Web page on CTAN <https://ctan.org/pkg/circuit-macros>

name	<code>Circuit_macros</code>
caption	M4 macros for electric circuit diagrams
author	Aplevich, Dwight
copyright	J. D. Aplevich (2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	10.7

description	(no language specified) A set of m4 macros for drawing high-quality electric circuits containing fundamental elements, amplifiers, transistors, and basic logic gates to include in TeX, LaTeX, or similar documents. Some tools and examples for other types of diagrams are also included. The macros can be evaluated to drawing commands in the pic language, which is very easy to understand and which has a good power/complexity ratio. Pic contains elements of a simple programming language, and is well-suited to line drawings requiring parametric or conditional components, fine tuning, significant geometric calculations or repetition, or that are naturally block structured or tree structured. (The m4 and pic processors are readily available for Unix and PC machines.) Alternative output macros can create TeX output to be read by pstricks, TikZ commands for use by the pgf bundle, or SVG.

year	2025
description	(no language specified) The Citation Style Language (CSL) is an XML-based language that defines the formats of citations and bibliography. There are currently thousands of styles in CSL including the most widely used APA, Chicago, Vancouver, etc. The citation-style-language package is aimed to provide another reference formatting method for LaTeX that utilizes the CSL styles. It contains a citation processor implemented in pure Lua (<code>citeproc-lua</code>) which reads bibliographic metadata and performs sorting and formatting on both citations and bibliography according to the selected CSL style. A LaTeX package (<code>citation-style-language.sty</code>) is provided to communicate with the processor.

1099 *cjk* – CJK language support

Web page on CTAN <https://ctan.org/pkg/cjk>

name	<code>cjk</code>
caption	CJK language support
author	Lemberg, Werner
license	gpl2 = GNU General Public License, version 2 (free)
version	4.8.5
description	(no language specified) CJK is a macro package for LaTeX, providing simultaneous support for various Asian scripts in many encodings (including Unicode): • Chinese (both traditional and simplified), • Japanese, • Korean and • Thai.

A special add-on feature is an interface to the Emacs editor (`cjk-enc.el`) which gives simultaneous, easy-to-use support to a bunch of other scripts in addition to the above — Cyrillic, Greek, Latin-based scripts, Russian and Vietnamese are supported.

1114 *clawxiv* – Provenance typesetting for human–AI collaborative writing

Web page on CTAN <https://ctan.org/pkg/clawxiv>

name	ClawXiv
caption	Provenance typesetting for human–AI collaborative writing
author	Kornai, András
copyright	Andras Kornai and Claude Sonnet 4.6 (Anthropic) (2026)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.4.3
description	(no language specified) The <i>clawxiv</i> package provides LaTeX environments for typesetting text according to its authorial provenance in documents that mix human and AI contributions. Three principal environments are provided: <code>seniorquote</code> for the corresponding human author, <code>aquote</code> for an AI coauthor, and <code>coauthorquote</code> for other human contributors. Convenient aliases <code>humanprompt</code> and <code>airesp</code> support prompt/response interaction transcripts. The package is part of the ClawXiv framework for archiving human–AI co-authored papers with full provenance tracking. A white paper is available at ClawXiv

name	clearsans
caption	Clear Sans fonts with LaTeX support
author	Tennent, Bob
license	apache2 = Apache License, version 2.0 (free)
license	lppl = The LaTeX Project Public License (free)

version	(2025-03-27)
last changes	2025-03-27
year	2025
description	(no language specified) Clear Sans was designed by Daniel Ratighan at Monotype under the direction of the User Experience team at Intel’s Open Source Technology Center. Clear Sans is available in three weights (regular, medium, and bold) with corresponding italics, plus light and thin upright (without italics). Clear Sans has minimized, unambiguous characters and slightly narrow proportions, making it ideal for UI design. Its strong, recognizable forms avoid distracting ambiguity, making Clear Sans comfortable for reading short UI labels and long passages in both screen and print. The fonts are available in both TrueType and Type 1 formats.

1117 clefval – Key/value support with a hash

Web page on CTAN <https://ctan.org/pkg/clefval>

name	clefval
caption	Key/value support with a hash
author	Henel, Yvon
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.1
description	(no language specified) This package provides only two macros viz. <code>\TheKey</code> and <code>\TheValue</code> to define then use pairs of key/value and gives a semblance of a hash. Syntax: <code>\TheKey{key}{value}</code> to define the value associated to the key, does not produce text; <code>\TheValue{key}</code> to return the value linked to the key. Both arguments of <code>\TheKey</code> are ‘moving’ as LaTeX defines the term and we have sometimes to protect them.

1118 cleveref – Intelligent cross-referencing

Web page on CTAN <https://ctan.org/pkg/cleveref>

name	cleveref
caption	Intelligent cross-referencing
author	Cubitt, Toby
copyright	Toby Cubitt (2006-2018)
license	lpl1.2 = The LaTeX Project Public License 1.2 (free)
version	0.21.4
description	(no language specified) The package enhances LaTeX’s cross-referencing features, allowing the format of references to be determined automatically according to the type of reference. The formats used may be customised in the preamble of a document; babel support is available (though the choice of languages remains limited: currently Danish, Dutch, English, French, German, Italian, Norwegian, Russian, Spanish and Ukrainian). The package also offers a means of referencing a list of references, each formatted according to its type. In such lists, it can collapse sequences of numerically-consecutive labels to a reference range.

1120 `cleveref-icelandic` – Icelandic grammatical declension for `cleveref` cross-references

Web page on CTAN <https://ctan.org/pkg/cleveref-icelandic>

name	<code>cleveref-icelandic</code>
caption	Icelandic grammatical declension for <code>cleveref</code> cross-references
author	Smárason, Sindri
copyright	Sindri Smárason (2026)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.1 (2026-04-01)
last changes	2026-04-01
year	2026
description	(no language specified) The <code>cleveref-icelandic</code> package extends <code>cleveref</code> with Icelandic declension support, allowing cross-references to figures, tables, equations, and sections to appear in the correct grammatical case (nominative, accusative, dative, genitive) in both singular and plural. Case can be specified explicitly by name (nom/acc/dat/gen or Icelandic abbreviations nf/pf/pgf/ef), by number (0–3), or automatically inferred from a preposition argument. Built-in declension tables are provided for the four most common reference types. Additional reference types and prepositions can be declared in the document preamble using <code>\DeclareIcrefType</code> and <code>\DeclareIscrefPreposition</code> .

1121 **cleveref-usedon** – Adds forward-referencing functionality to the **cleveref** package

Web page on CTAN <https://ctan.org/pkg/cleveref-usedon>

name	cleveref-usedon
caption	Adds forward-referencing functionality to the cleveref package
author	Pistre, Sven
copyright	Sven Pistre (2023)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.4.0 (2023-04-21)
last changes	2023-04-21
year	2023
description	(no language specified) Imagine you are reading a long mathematical text such as a text book or a thesis. There are plenty of supplementary lemmas, propositions, theorems and/or exercises throughout the whole text. You ask yourself "Gosh, while Lemma 1.12 is certainly an interesting result, <i>where</i> is this result used later on in this long text? I really would find that helpful to decide <i>why</i> I should read the proof." You can, of course, use the PDF search function of your viewer to look up the string "Lemma 1.12", but wouldn't it be more helpful if Lemma 1.12 already indicated all or at least its most useful/crucial applications via an info message? This is what this package tries to address: The info message "Used on p. 40, 43-45 and 101." would then be printed to the header of Lemma 1.12. This is done by extending the <code>\cref</code> and <code>\Cref</code> commands and giving them an optional argument <code>UsedOn</code>. Every time you wish to record a reference in the "used on page list", you would simply type <code>\cref[UsedOn]{<LabelName>}</code>. If you use <code>\cref</code> without this optional argument, this reference won't be recorded in this page list.

1127 clojure-pamphlet – A simple literate programming tool based on clojure’s pamphlet systemWeb page on CTAN <https://ctan.org/pkg/clojure-pamphlet>

name	clojure-pamphlet
caption	A simple literate programming tool based on clojure’s pamphlet system
author	Lanchares, Ernesto
copyright	Ernesto Lanchares Sanchez (2019)
license	gpl3+ = GNU General Public License, version 3 or newer (free)
version	1.3

description	(no language specified) The Clojure pamphlet system is a system based on the Clojure literate system. In the Clojure’s pamphlet system you have your main LaTeX file, which can be compiled regularly. This file contains documentation and source code (just like in other forms of literate programming). These code snippets are wrapped in the <code>chunk</code> environment, hence they can be recognized by the <code>tangler</code> in order to extract them. Chunks can be included inside each other by the <code>getchunk</code> command (which will be typesetted accordingly). Finally, the LaTeX file will be run through the <code>tangler</code> to get the desired chunk of code.

1135 cluttex – An automation tool for running LaTeX

Web page on CTAN <https://ctan.org/pkg/cluttex>

name `cluttex`

caption An automation tool for running LaTeX

author Arata, Mizuki

copyright ARATA Mizuki (2016-2024)

license gpl3+ = GNU General Public License, version 3 or newer (free)

version 0.7.0 (2025-03-16)

last changes 2025-03-16

year 2025

description (no language specified) This is another tool for the automation of LaTeX document processing, like [latexmk](#) or [arara](#) .

The main feature of this tool is that it does not clutter your working directory with `.aux` or `.log` or other auxiliary files.

It has of course the usual features of automation tools: It automatically re-runs (La)TeX for cross-references. [MakeIndex](#) , [BibTeX](#) , [Biber](#) , or [makeglossaries](#) will be executed if a corresponding option is set. Furthermore, `cluttex` can watch input files for changes (using an external program).

1136 *cm* – Computer Modern fonts

Web page on CTAN <https://ctan.org/pkg/cm>

name *cm*

caption Computer Modern fonts

author Knuth, Donald E.

license knuth = Knuth License (free)

description (no language specified) Knuth's final iteration of his re-interpretation of a c.19 Modern-style font from Monotype. The family is comprehensive, offering both sans and roman styles, and a monospaced font, together with mathematics fonts closely integrated with the mathematical facilities of TeX itself.

The base fonts are distributed as [Metafont source](#) , but autotraced PostScript Type 1 versions are available (one version in the [AMS fonts](#) distribution, and also the [BaKoMa](#) distribution).

The Computer Modern fonts have inspired many later families, notably the [European Computer Modern](#) and the [Latin Modern](#) families.

1139 cm-lgc – Type 1 CM-based fonts for Latin, Greek and Cyrillic

Web page on CTAN <https://ctan.org/pkg/cm-lgc>

name	cm-lgc
caption	Type 1 CM-based fonts for Latin, Greek and Cyrillic
author	Kryukov, Alexey
copyright	Alexej Kryukov (2003-2005)
license	gpl = GNU General Public License (free)
version	0.5
description	(no language specified) The fonts are converted from Metafont sources of the Computer Modern font families, using textrace. Supported encodings are: T1 (Latin), T2A (Cyrillic), LGR (Greek) and TS1. The package also includes Unicode virtual fonts for use with Omega. The font set is not a replacement for any of the other Computer Modern-based font sets (for example, cm-super for Latin and Cyrillic, or cbgreek for Greek), since it is available at a single size only; it offers a compact set for ‘general’ working. The fonts themselves are encoded to external standards, and virtual fonts are provided for use with TeX.
documentation	(no language specified) <i>Installation instructions</i> : https://ctan.org/tex-archive/fonts/ps-type1/cm-lgc/INSTALL
documentation	(no language specified) <i>Bundle Readme</i> : https://ctan.org/tex-archive/fonts/ps-type1/cm-lgc/README

name	<i>cm-unicode</i>
caption	Computer Modern Unicode font family
author	Panov, Andrey
author	Lečić, Nikola
license	ofl = The SIL Open Font License (free)
version	0.7.0

description	(no language specified) Computer Modern Unicode fonts, converted from Metafont sources using mfttrace with autotrace backend and fontforge. Some characters in several fonts are copied from Blue Sky type 1 fonts released by AMS. Currently the fonts contain glyphs from Latin (Metafont ec, tc, vnr), Cyrillic (lh), Greek (cbgreek when available) code sets and IPA extensions (from tipa). This font set contains 33 fonts. This archive contains AFM, PFB and OTF versions; the OTF version of the Computer Modern Unicode fonts works with TeX engines that directly support OpenType features, such as XeTeX and LuaTeX.

1168 cmsd – Interfaces to the CM Sans Serif Bold fonts

Web page on CTAN <https://ctan.org/pkg/cmsd>

name	cmsd
caption	Interfaces to the CM Sans Serif Bold fonts
author	Schmidt, Walter A.
author	Harcombe, Keiran
license	lppl = The LaTeX Project Public License (free)
description	(no language specified) The purpose of the package is to provide an alternative interface to the CM Sans Serif boldface fonts. The EC (T1, Cork) encoded versions of the ‘CM Sans Serif boldface extended’ fonts differ considerably from the traditionally (OT1) encoded ones: at large sizes, >10pt, they have thinner strokes and are much wider. At 25pt they are hardly to be recognized as being ‘boldface’. This package attempts to make these T1 fonts look like the traditional ones did. You do not need any new fonts; the package just changes the way LaTeX makes use of the current ones.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/cmsd/readme
on CTAN	https://ctan.org/tex-archive/macros/latex/contrib/cmsd

1170 `cmsrb` – Computer Modern for Serbian and Macedonian

Web page on CTAN <https://ctan.org/pkg/cmsrb>

name	<code>cmsrb</code>
caption	Computer Modern for Serbian and Macedonian
author	Stefanović, Uroš
license	gpl = GNU General Public License (free)
version	4.0 (2020-03-30)
last changes	2020-03-30
year	2020
description	(no language specified) This package provides provides Adobe Type 1 Computer Modern fonts for the Serbian and Macedonian languages. Although the <code>cm-super</code> package provides great support for cyrillic script in various languages, there remains a problem with italic variants of some letters for Serbian and Macedonian. This package includes the correct shapes for italic letters <code>\cyrb</code>, <code>\cyrg</code>, <code>\cyrd</code>, <code>\cyrp</code>, and <code>\cyrt</code>. It also offers some improvements in letters and accents used in the Serbian language. Supported encodings are: T1, T2A, TS1, X2 and OT2. The OT2 encoding is modified so that it is now easy to transcribe Latin text to Cyrillic.

1178 `cnltx` – LaTeX tools and documenting facilities

Web page on CTAN <https://ctan.org/pkg/cnltx>

name	<code>cnltx</code>
caption	LaTeX tools and documenting facilities
author	Niederberger, Clemens
copyright	Clemens Niederberger (2013-2019)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.15 (2019-11-01)
last changes	2019-11-01
year	2019
description	(no language specified) This is a versatile bundle of packages and classes for consistent formatting of control sequences, package options, source code examples, and writing a package manual (including an index containing the explained control sequences, options, ldots). The bundle also provides several other small ideas of mine such as a mechanism for providing abbreviations etc. Not at least it provides a number of programming tools. The intention behind this bundle mainly is a selfish one: documenting my own packages. The bundle contains an index style file <code>cnltx.ist</code> that should be placed in a directory in a TDS <code>makeindex</code> directory.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/cnltx/README

1180 cntdwn – Support for countdowns, and for clocks in any timezoneWeb page on CTAN <https://ctan.org/pkg/cntdwn>

name	cntdwn
caption	Support for countdowns, and for clocks in any timezone
author	Story, Donald P.
copyright	D. P. Story (2010)
license	lpl1 = The LaTeX Project Public License 1 (free)
version	0.6 (2014-11-26)
last changes	2014-11-26
year	2014
description	(no language specified) The package provides three sets of timers: • A short countdown (or count up) to an event. (Short being defined as less than a day.) The short countdown is designed for talks or presentations. There are three notification times, to announce to the speaker and audience that time is running out; • A long countdown to an event in the (distant) future. There are three notifications up to the main event (when counter reaches 0 seconds), and three notifications following 0 seconds; • Clock counters. The package allows you to create clocks that display time and date. Clocks can show local time or time in any foreign time zone.

1183 *cochineal* – Cochineal fonts with LaTeX support

Web page on CTAN <https://ctan.org/pkg/cochineal>

name	<code>cochineal</code>
caption	Cochineal fonts with LaTeX support
author	Sharpe, Michael
copyright	Michael Sharpe (2016-2024)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
license	ofl = The SIL Open Font License (free)
version	1.085 (2024-03-08)
last changes	2024-03-08
year	2024
description	(no language specified) Cochineal is a fork from the Crimson fonts (Roman, Italic, Bold, BoldItalic only) released under the OFL by Sebastian Kosch. These remarkable fonts are inspired by the famous oldstyle fonts in the <i>garalde</i> family (Garamond, Bembo) but, in the end, look more similar to Minion, though with smaller xheight and less plain in detail. The Crimson fonts on which these were based had roughly 4200 glyphs in the four styles mentioned above. Cochineal adds more than 1500 glyphs in those styles so that it is possible to make a TeX support collection that contains essentially all glyphs in all styles. Bringing the Semibold styles up the same level would have required adding about 2000 additional glyphs, which I could not even contemplate. The fonts are provided in OpenType and PostScript formats.

1193 *codicefiscaleitaliano* – Test the consistency of the Italian personal Fiscal CodeWeb page on CTAN <https://ctan.org/pkg/codicefiscaleitaliano>

name	codicefiscaleitaliano
caption	Test the consistency of the Italian personal Fiscal Code
author	Beccari, Claudio
copyright	Claudio Beccari (2012)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.2
description	(no language specified) The alphanumeric string that forms the Italian personal Fiscal Code is prone to be misspelled thus rendering a legal document invalid. The package quickly verifies the consistency of the fiscal code string, and can therefore be useful for lawyers and accountants that use fiscal codes very frequently.
documentation	<i>Package documentation (principally Italian):</i> https://ctan.org/tex-archive/macros/latex/contrib/codicefiscaleitaliano/codicefiscaleitaliano.pdf

1194 coelacanth – Coelacanth fonts with LaTeX support

Web page on CTAN <https://ctan.org/pkg/coelacanth>

name	coelacanth
caption	Coelacanth fonts with LaTeX support
author	Tennent, Bob
license	ofl = The SIL Open Font License (free)
license	lppl = The LaTeX Project Public License (free)
version	0.005 (2022-09-29)
last changes	2022-09-29
year	2022
description	(no language specified) This package provides LaTeX, pdfLaTeX, XeLaTeX, and LuaLaTeX support for Coelacanth fonts, designed by Ben Whitmore. Coelacanth is inspired by the classic Centaur type design of Bruce Rogers, described by some as the most beautiful typeface ever designed. It aims to be a professional quality type family for general book typesetting.
documentation	(no language specified) <i>Readme</i>: https://ctan.org/tex-archive/fonts/coelacanth/README

1196 **collargs** – Collect arguments of any command

Web page on CTAN <https://ctan.org/pkg/collargs>

name	CollArgs
caption	Collect arguments of any command
author	Živanović, Sašo
copyright	Sašo Živanović (2023)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.2.0 (2024-03-15)
last changes	2024-03-15
year	2024
description	(no language specified) This is a cross-format package providing a command which can determine the argument scope of any command whose argument structure conforms to xparse’s argument specification. It was implemented as an auxiliary package of Advice ... which in turn was implemented as an auxiliary package of Memoize . This is why it is, somewhat unconventionally, documented alongside that package. This applies to both the manual and the documented code listing.

version	0.4c

1200 `collref` – Collect blocks of references into a single reference

description	(no language specified) The package provides macros to collect and process a macro argument (i.e., something which looks like a macro argument) as a horizontal box rather than as a real macro argument. The "arguments" are stored as if they had been saved by <code>\savebox</code> or by the <code>lrbox</code> environment. Grouping tokens <code>\bgroup</code> and <code>\egroup</code> may be used, which allows the user to have the beginning and end of a group in different macro invocations, or to place them in the begin and end code of an environment. Arguments may contain verbatim material or other special use of characters. The macros were designed for use within other macros.

1202 *colophon* – Provides commands for producing a colophon

Web page on CTAN	https://ctan.org/pkg/colophon
name	colophon
caption	Provides commands for producing a colophon
author	Goodman, Donald P.
copyright	Donald P. Goodman (2018)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.1
description	(no language specified) Colophons are a once-common design device by which a book (or document) designer gave some information to his readers about the design and makeup of the text. It typically includes the publisher (if not included elsewhere in the document), font size, leading size, measure, and of course font face identification. Sometimes it includes information about the tools used, as well. This package provides some highly configurable macros, with sensible defaults, for producing colophons without having to muck around with a lot of manual code.

1205 colorblind – Easy colorblind-safe typesetting

Web page on CTAN	https://ctan.org/pkg/colorblind
name	colorblind
caption	Easy colorblind-safe typesetting
author	Pfahler, Simon
copyright	Simon Pfahler (2023-2026)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.2.1 (2026-01-19)
last changes	2026-01-19
year	2026
description	(no language specified) In colorblind-safe documents, the contents are presented in a way that the same information is conveyed to readers regardless of a potential color vision deficiency. This package provides the tools necessary for colorblind-safe typesetting in LaTeX. It provides color schemes for a wide range of applications. The most commonly used schemes are qualitative schemes, providing easily distinguishable colors for use in graphics, but also for text coloring or highlighting. Additionally, diverging and sequential schemes are included which can be used for encoding quantitative information using colors. This package incorporates colorblind-safeness into the writing process, making it both less cumbersome and less error-prone.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/colorblind/colorblind_doc.pdf

last changes	2025-10-21
year	2025
description	(no language specified) This package offers you a LaTeX style file and two classes to typeset articles or books in a colorful way. These classes currently have native support for English, French, German, Italian, Portuguese (European and Brazilian), and Spanish typesetting. They compile with any major TeX engine. You may also wish to consider the packages lebhart and beaulivre , which are enhanced versions of the classes provided here. They have unicode support, thus can only be used with either XeLaTeX or LuaLaTeX. Currently they have native support for Chinese (both simplified and traditional), English, French,

1215 colorprofiles – Collection of free ICC profiles

German, Italian, Japanese, Portuguese (European and Brazilian), Russian and Spanish typesetting, and also use more beautiful fonts.

1219 *colortab* – Shade cells of tables and halign

Web page on CTAN	https://ctan.org/pkg/colortab
name	colortab
caption	Shade cells of tables and halign
author	Van Zandt, Timothy
author	Voß, Herbert
copyright	Timothy Van Zandt (1993, 2010)
license	lppl = The LaTeX Project Public License (free)
version	1.0
description	(no language specified) The package lets you shade or colour the cells in the alignment environments such as <code>\halign</code> and LaTeX's <code>tabular</code> and <code>array</code> environments. The colortbl package is to be preferred today with LaTeX (it assures compatibility with the longtable package, which is no longer true with <code>colortab</code>); another modern option is the table-colouring option of the xcolor. However, <code>colortab</code> remains an adequate solution for use with Plain TeX.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/generic/colortab/colortab-doc.pdf

1227 `combinedgraphics` – Include graphic (EPS or PDF)/LaTeX combinations

Web page on CTAN <https://ctan.org/pkg/combinedgraphics>

name	<code>combinedgraphics</code>
caption	Include graphic (EPS or PDF)/LaTeX combinations
author	Schneider, Christian
copyright	Christian Schneider (2009)
license	gpl = GNU General Public License (free)
version	0.2.2
description	(no language specified) This package provides a macro (<code>\includecombinedgraphics</code>) for the inclusion of combined EPS/LaTeX and PDF/LaTeX graphics (an export format of Gnuplot, Xfig, and maybe other programs). Instead of including the graphics with a simple <code>\input</code>, the <code>\includecombinedgraphics</code> macro has some comforts: • changing the font and color of the text of the LaTeX part; rescaling the graphics without affecting the font of the LaTeX part; • automatic inclusion of the vector graphics part, as far as LaTeX part does not do it (e.g., for files exported from Gnuplot before version 4.2); and • rescaling and rotating of complete graphics (similar to <code>\includegraphics</code> from the graphicx package).
documentation	(no language specified) <i>Package documentation</i>: https://ctan.org/tex-archive/macros/latex/contrib/combinedgraphics/combinedgraphics.pdf

1233 commado – Expandable iteration on comma-separated and filename lists

Web page on CTAN <https://ctan.org/pkg/commado>

name	commado
caption	Expandable iteration on comma-separated and filename lists
author	Lück, Uwe
copyright	Uwe Lück (2012)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	r0.11a

description	(no language specified) The bundle provides two packages: <code>commado</code> and <code>filesdo</code>. The package <code>commado</code> provides the command <code>\DoWithCSL</code>: <code>\DoWithCSL{< cmd >}{< list >}</code> applies an existing one-parameter macro <code>< cmd ></code> to each item in a list <code>< list ></code> in which terms are separated by commas. The package <code>filesdo</code> provides the command <code>\DoWithBasesExts</code>: <code>\DoWithBasesExts {< cmd >}{< bases >}{< exts >}</code> which runs the single parameter command <code>< cmd ></code> on each file whose base and extension are respectively from the comma-separated lists <code>< bases ></code> and <code>< exts ></code>. These ‘loop’-like commands are (themselves) entirely expandable. The packages rely on packages <code>plainpkg</code>, and <code>stacklet</code>

1237 *comment* – Selectively include/exclude portions of text

Web page on CTAN	https://ctan.org/pkg/comment
name	comment
caption	Selectively include/exclude portions of text
author	Eijkhout, Victor
copyright	Victor Eijkhout (1998-2016)
license	gpl2 = GNU General Public License, version 2 (free)
version	3.8

description	(no language specified) Selectively include/exclude pieces of text, allowing the user to define new, separately controlled, comment versions. All text between <code>\comment ... \endcomment</code> or <code>\begin{comment} ... \end{comment}</code> is discarded. The opening and closing commands should appear on a line of their own. No starting spaces, nothing after it. This environment should work with arbitrary amounts of comment, and the comment can be arbitrary text. Other ‘comment’ environments are defined and selected/deselected with <code>\includecomment{versiona}</code> and <code>\excludecomment{versionb}</code>. These environments are used as <code>\versiona ... \endversiona</code> or <code>\begin{versiona} ... \end{versiona}</code> with the opening and closing commands again on a line of their own.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/comment/README

1239 *comment_io* – A Python script to comment and uncomment lines

Web page on CTAN https://ctan.org/pkg/comment_io

name	<code>comment_io</code>
caption	A Python script to comment and uncomment lines
author	Larsson, Carl Martin Henrik
license	gpl3 = GNU General Public License, version 3 (free)
version	1.1 (2015-06-29)
last changes	2015-06-29
year	2015
description	(no language specified) The author tells us: ”This is a small script written in Python to help you to automatically comment and uncomment lines in your code. The program was sprung out of a need I myself had of turning on and off certain environments in LaTeX. After digging around, trying to make this happen by using only LaTeX code, I finally got fed up and just wrote this program instead.” Basically, you use the program by marking certain lines in your code with certain commands. The program then detects these commands and comments or uncomments the whole line depending on which mode you’ve set it to.

1255 *concepts* – Keeping track of formal ‘concepts’ for a particular field

Web page on CTAN	https://ctan.org/pkg/concepts
name	<code>concepts</code>
caption	Keeping track of formal ‘concepts’ for a particular field
author	Helvensteijn, Michiel
copyright	Michiel Helvensteijn (2012)
license	lppl = The LaTeX Project Public License (free)
version	0.0.5-r1
description	(no language specified) The package helps to keep track of formal ‘concepts’ for a specific field or document. This is particularly useful for scientific papers (for example, in physics, mathematics or computer science), which may introduce several concepts (with their own symbols). The package’s commands allow the user to define a concept (typically, near its first use), and will ensure consistent use throughout the document. The package depends on several other packages; while these are fairly common packages, the user should check the package’s README file for the complete list.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/concepts/README

1262 conditext – Define and manage conditional content

Web page on CTAN <https://ctan.org/pkg/conditext>

name	CondiTeXt
caption	Define and manage conditional content
author	Brabant, Jean-Louis
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.5 (2020-06-01)
last changes	2020-06-01
year	2020

description	(no language specified) This package provides some commands to define and manage conditional content in a LaTeX source document. A conditional content, in the sense within this is understood in this package, is a text (including mathematical or other formulas) and/or a graphical element (diagram, figure, image...) as substitutable forms, which, according to a condition test, may or may not appear in the generated document. One of the most common forms of conditional content management is multilingual ; but it can also include versioning, confidentiality levels, and so on. The philosophy of this package is based on the respective notions of condition field, condition property and condition space. With this package, any substitutable form in a source document is identified by a condition field and a condition property. The <i>condition field</i> is a functional theme that allows you to group together substitutable forms for the same conditional management. The <i>condition property</i> is a functional characterization specific to each substitutable form of a single condition domain. The <i>condition space</i> is used to designate the substitutable form(s) that must appear in the generated document. A condition space is defined by specifying a condition domain and a condition property to match with one or more substitutable forms.

1263 confproc – A set of tools for generating conference proceedings

Web page on CTAN <https://ctan.org/pkg/confproc>

name	confproc
caption	A set of tools for generating conference proceedings
author	Verfaille, Vincent
copyright	Vincent Verfaille (2007, 2011)
license	lppl = The LaTeX Project Public License (free)
version	0.8
description	(no language specified) The confproc collection comprises a class, a BibTeX style, and some scripts for generating conference proceedings. It derives from LaTeX scripts written for the DAFx-06 conference proceedings, largely based on the pdfpages package for including the proceedings papers and the hyperref package for creating a proper table of contents, bookmarks and general bibliography back-references. Confproc also uses many other packages for fine tuning of the table of contents, bibliography and index of authors. The added value of the class resides in its time-saving aspects when designing conference proceedings.

1314 `context-vim` – Generate ConTeXt syntax highlighting code from vim

Web page on CTAN <https://ctan.org/pkg/context-vim>

name	<code>context-vim</code>
caption	Generate ConTeXt syntax highlighting code from vim
author	Mahajan, Aditya
author	Miklavec, Mojca
license	bsd = BSD Style License (free)
version	(2022-02-17)
last changes	2022-02-17
year	2022
description	(no language specified) ConTeXt has excellent pretty printing capabilities for many languages. The code for pretty printing is written in TeX, and due to catcode juggling, such verbatim typesetting is perhaps the trickiest part of TeX. This makes it difficult for a "normal" user to define syntax highlighting rules for a new language. This module takes the onus of defining syntax highlighting rules away from the user and uses ViM editor to generate the syntax highlighting. There is a helper <code>2context.vim</code> script to do the syntax parsing in ViM.
documentation	(no language specified) <i>Package usage notes</i> : https://ctan.org/tex-archive/macros/context/contrib/context-vim/doc/context/third/vim/vim.txt
on CTAN	https://ctan.org/tex-archive/macros/context/contrib/context-vim

version	0.91 (2024-02-07)
last changes	2024-02-07
year	2024
description	(no language specified) This package enables the typesetting of formalized legal documents such as contracts, statutes etc. It will be the successor to the scrjura package. Like the latter, "contract" allows the typographically appealing typesetting of many different legal texts. The typesetting of contracts according to German conventions is supported "out of the box". In addition, the package supports the definition of custom environments in order to typeset contracts and legal texts according to Anglo-American specifications, for example.

1328 cool – Content-Oriented LaTeX

Web page on CTAN <https://ctan.org/pkg/cool>

name	cool
caption	Content-Oriented LaTeX
author	Setzer, Nick
copyright	Nick Setzer (2005-2023)
license	lgpl = GNU Lesser General Public License (free)
version	1.35 (2023-05-03)
last changes	2023-05-03
year	2023
description	(no language specified) The package (Content Oriented LaTeX) gives LaTeX the power to retain mathematical meaning of its expressions in addition to the typesetting instructions; essentially separating style from the content of the math. One advantage of keeping mathematical meaning is that conversion of LaTeX documents to other executable formats (such as Content MathML or Mathematica code) is greatly simplified. The package requires the coolstr , coollist and forloop packages.

1330 coollist – Manipulate Content Oriented LaTeX Lists

Web page on CTAN <https://ctan.org/pkg/coollist>

name	coollist
caption	Manipulate Content Oriented LaTeX Lists
author	Setzer, Nick
copyright	nsetzer (2005-2023)
license	lgpl = GNU Lesser General Public License (free)

version	1.4 (2023-05-03)
last changes	2023-05-03
year	2023
description	(no language specified) Lists are defined as a sequence of tokens separated by a comma. The coollist package allows the user to access certain elements of the list while neglecting others—essentially turning lists into a sort of array. List elements are accessed by specifying the position of the object within the list (the index of the item).

1334 *coop-writing* – Support for Cooperative Writing and editorial comments

Web page on CTAN <https://ctan.org/pkg/coop-writing>

name	<i>coop-writing</i>
caption	Support for Cooperative Writing and editorial comments
author	Xexéo, Geraldo
copyright	Geraldo Xexéo (2022)
license	mit = MIT License (free)
version	1.2.4 (2022-01-13)
last changes	2022-01-13
year	2022
description	(no language specified) This package for Cooperative Writing supports editorial comments and gives some extra support for writing and submitting papers, such as anonymization commands for any document that involves more than one author or editor. The general behavior of this package is to provide different ways of marking your text, for example with comments or to-do-notes, suggestions to add, remove or change text that can be totally suppressed from the output when desired. Mostly, this can be easily done using one of the three main option states: <code>editing</code>, <code>submit</code>, and <code>publish</code>. Users should use the <code>editing</code> state most of the time. In this state, all markings will appear and anonymization will be off. When submitting, the <code>submit</code> state will provide a clean article, without any markings, but anonymized. It is possible to use the options <code>submit</code> and <code>noanonymize</code> together. <code>Publish</code> will never anonymize. The goal is to make the <code>submit</code> and <code>publish</code> documents states minimally invasive, to avoid any clash with publishers' styles. Commands were inspired from different packages that do not work together very well, such as <code>ed</code>, <code>todonotes</code>, and <code>color-edits</code>.

1339 copyedit – Copyediting support for LaTeX documents

Web page on CTAN <https://ctan.org/pkg/copyedit>

name `copyedit`

caption Copyediting support for LaTeX documents

author Venkatesan, SK

author Rajagopal, C. V.

author Radhakrishnan, C. V.

license lpl1.3 = The LaTeX Project Public License 1.3 (free)

version 1.6 (2015-07-21)

last changes 2015-07-21

year 2015

description (no language specified) This package implements copyediting support for LaTeX documents. Authors can enjoy the freedom of using, for example, words with US or UK or Canadian or Australian spelling in a mixed way, yet, they can choose any one of the usage forms for their entire document irrespective of kinds of spelling they have adopted. In the same fashion, the users can have the benefit of the following features available in the package:

- Localization — British-American-Australian-Canadian
- Close-up, Hyphenation, and Spaced words
- Latin abbreviations
- Acronyms and Abbreviations
- Itemization, nonlocal lists and labels
- Parenthetical and serial commas
- Non-local tokenization in language through Abbreviations and pronouns.

1350 *corridx-latex* – Correct index entries for chemical compounds

Web page on CTAN <https://ctan.org/pkg/corridx-latex>

name	corridx-latex
caption	Correct index entries for chemical compounds
author	Fink, Johannes K.
copyright	Johannes Fink (2005)
license	lppl = The LaTeX Project Public License (free)
version	1.0
description	(no language specified) The names of chemical compounds often have prefixes that do not contribute to the alphabetic sorting of the corresponding index entry. This drawback can be circumvented by introducing sort keys into the index entry; the <i>corridx</i> package does this automatically. This package replaces the old Pascal program <i>corridx</i> .

documentation	(no language specified) <i>Sample of usage:</i> https://ctan.org/tex-archive/macros/latex/contrib/corridx/corridx.sample.pdf
– local file	./9987696989-corridx.sample.pdf

1351 *corridx-obsolete* – Add index entries to LaTeX document

Web page on CTAN	https://ctan.org/pkg/corridx-obsolete
name	corridx-obsolete
caption	Add index entries to LaTeX document
author	Fink, Johannes K.
license	noinfo = noinfo
version	(2004-10-12)
last changes	2004-10-12
year	2004
description	(no language specified) Corridx is a preprocessor which stands between your LaTeX run and makeindex. It corrects index entries, in cases where the natural way to express an index item is bad for index sorting. So, for example, it can simply transform an entry <code>\index{1,2-ethanediol}</code> to <code>\index{ethanediol@1,2-ethanediol}</code>, which will be sorted as you might hope, rather than in amongst the numbers. The program is distributed as Pascal source, though a win32 executable is also available; the documentation shows how to integrate it with winedt.

The program has now been superseded by a **LaTeX package** which does the job on the fly.

1358 countwords – Exact word counts, stored in LaTeX counters, using Lua

Web page on CTAN <https://ctan.org/pkg/countwords>

name	countwords
caption	Exact word counts, stored in LaTeX counters, using Lua
author	Heagren, Hugo
copyright	Hugo Heagren (2026)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0 (2026-04-03)
last changes	2026-04-03
year	2026
description	(no language specified) This is a simple package for generating exact wordcounts in LaTeX projects. It counts words, storing the value in a standard LaTeX counter, which can then be printed in the normal way. Word counting can be paused and resumed, so you can skip certain environments like mathematics, and multiple word counts can happen in parallel (you could keep separate global and per-chapter counts, for example). The word counting engine itself is pulled from https://gist.github.com/phi-gamma/2622252 .

1364 **coverpage** – Automatic cover page creation for scientific papers

Web page on CTAN <https://ctan.org/pkg/coverpage>

name	coverpage
caption	Automatic cover page creation for scientific papers
author	Mühlich, Matthias
author	Kopp, Oliver
copyright	Matthias Mühlich (2006)
license	lpl1.2 = The LaTeX Project Public License 1.2 (free)
version	1.01

description	(no language specified) The package CoverPage was created to supplement scientific papers with a cover page containing bibliographical information, a copyright notice, and/or some logos of the author's institution. The cover page is created (almost) automatically; this is done by parsing BibTeX information corresponding to the main document and reading a configuration file in which the author can set information like the affiliation he or she is associated with. The cover page consists of header, body and footer; all three are macros which can be redefined using <code>\renewcommand</code>, thus allowing easy customization of the package. Additionally, it should be stressed that the cover page layout is totally independent of the main document and its page layout. This package requires four other packages (<code>keyval</code> , <code>url</code> , <code>textcomp</code> , and <code>verbatim</code>), but all of them are standard packages and should be part of every LaTeX installation.

1383 *crop* – Support for cropmarks

Web page on CTAN	https://ctan.org/pkg/crop
name	crop
caption	Support for cropmarks
author	Thomas, Reuben
author	Franz, Melchior
copyright	Melchior Franz (1998-2017)
license	lppl = The LaTeX Project Public License (free)
version	1.10.2 (2020-06-05)
last changes	2020-06-05
year	2020
description	(no language specified) A package providing corner marks for camera alignment as well as for trimming paper stacks, and additional page information on every page if required. Most macros are easily adaptable to personal preferences. An option is provided for selectively suppressing graphics or text, which may be useful for printing just colour graphics on a colour laser printer and the rest on a cheap mono laser printer. A page info line contains the time and a new cropmarks index and is printed at the top of the page. A configuration command is provided for the info line font. Options for better collaboration with dvips, pdfTeX and vtex are provided.

license	gpl3+ = GNU General Public License, version 3 or newer (free)
version	1.1 (2024-04-13)
last changes	2024-04-13
year	2024
description	(no language specified) <i>crossrefenum</i> lets TeX manage the formatting of bunches of cross-references for you. It features: • Automatic collapsing of references; • Support for references by various criteria, including page and note number, line number in ConTeXt and edpage and edline when used in conjunction with reledmac • Handling of references combining two criteria (e.g. by page and note number) • Extension mechanisms to add support to other types of references without modifying the internal macros. Note that sorting is not supported. I assume that users know in what order the labels they refer to appear in their document. It is written in Plain TeX as much as possible in order to make it compatible with a wide array of formats. For the moment, it works out of the box with ConTeXt and LaTeX.

Web page on CTAN <https://ctan.org/pkg/crossword>

name `crossword`
 caption Typeset crossword puzzles
 author Neugebauer, Gerd
 copyright Gerd Neugebauer (1995-2026)
 license other-free = Free license not otherwise listed (free)
 version 1.15 (2026-02-13)
 last changes 2026-02-13

year	2026
description	(no language specified) An extended grid-based puzzle package, designed to take all input (both grid and clues) from the same file. The package can typeset grids with holes in them (for advertisements, or other sorts of stuff), and can deal with several sorts of puzzle: • The classical puzzle contains numbers for the words and clues for the words to be filled in. • The numbered puzzle contains numbers in each cell where identical numbers represent identical letters. The goal is to find out which number corresponds to which letter. • The fill-in type of puzzle consists of a grid and a list of words. The goal is to place all words in the grid. • Sudoku and Kakuro puzzles involve filling in grids of numbers according to their own rules. Format may be block-separated, or separated by thick lines. Input to the package is somewhat redundant: specification of the grid is separate from specification of the clues (if they are necessary). The author considers this style both ‘natural’ and robust.

description	(no language specified) This class wraps the default article and extends it for a homogeneous look of hand-in assignments at university (RWTH Aachen University, Computer Science Department), specifically in the field of computer science, but easily extensible to other fields. It provides macros for structuring exercises, aggregating points, and displaying a grading table, as well as several macros for easier math mode usage.

1408 csplain – Plain TeX multilanguage supportWeb page on CTAN <https://ctan.org/pkg/csplain>

name	csplain
caption	Plain TeX multilanguage support
author	Olšák, Petr
license	other-free = Free license not otherwise listed (free)
version	Mar. 2022
description	(no language specified) CSplain is a small extension of basic Plain TeX macros, the formats csplain and pdfcsplain can be generated. It supports: • hyphenation of words for 50+ languages, • simple and powerfull font loading system (various sizes of fonts), • TeX, pdfTeX, XeTeX and LuaTeX engines, • math fonts simply loaded with full amstex-like features,

- three internal encodings (IL2 for Czech/Slovak languages, T1 for many languages with latin alphabet and Unicode in new TeX engines),
- natural UTF-8 input in pdfTeX using encTeX without any active characters,
- Czech and Slovak special typesetting features.

An important part of the package is OPmac, which implements most of LaTeX's features (sectioning, font selection, color, hyper reference and urls, bibliography, index, toc, tables, etc.) by Plain TeX macros. The OPmac macros can generate and bibliography without any external program.

1410 csquotes – Context sensitive quotation facilities

Web page on CTAN <https://ctan.org/pkg/csquotes>

name	csquotes
caption	Context sensitive quotation facilities
author	Wright, Joseph
author	Lehman, Philipp
copyright	Philipp Lehman (2003-2011)
copyright	Joseph Wright (2015-2019, 2021, 2022,2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	5.2o (2024-04-04)
last changes	2024-04-04
year	2024
description	(no language specified) This package provides advanced facilities for inline and display quotations. It is designed for a wide range of tasks ranging from the most simple applications to the more complex demands of formal quotations. The facilities include commands, environments, and user-definable ‘smart quotes’ which dynamically adjust to their context. Quotation marks are switched automatically if quotations are nested and they can be adjusted to the current language if the babel package is available. There are additional facilities designed to cope with the more specific demands of academic writing, especially in the humanities and the social sciences. All quote styles as well as the optional active quotes are freely configurable. The package is dependent on e-TeX, and requires the author’s etoolbox package.

1414 *csthm* – Customized theorem environments for computer science documents

Web page on CTAN <https://ctan.org/pkg/csthm>

name	csthm
caption	Customized theorem environments for computer science documents
author	Datta, Agni
copyright	Agni Datta (2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)

version	1.3
description	(no language specified) This package provides customized theorem-like environments specifically designed for computer science documents. It offers a set of pre-defined theorem styles and environments to streamline the creation of theorems, definitions, remarks, and other common structures in computer science papers and documents. Features: • Predefined theorem styles tailored for computer science • Environments for theorems, lemmas, definitions, examples, remarks, and more • Special environments for cases and axioms • Customizable accent color • Optional cleveref support for enhanced cross-referencing The package requires the following packages to be installed: <code>amsmath</code> , <code>amssymb</code> , <code>amsthm</code> , <code>enumitem</code> , and <code>thmtools</code> . If using the <code>cleveref</code> option, <code>hyperref</code> and <code>cleveref</code> are also required.

1416 *csv2latex* – Convert spreadsheet table cells into LaTeX source

Web page on CTAN <https://ctan.org/pkg/csv2latex>

name	csv2latex
caption	Convert spreadsheet table cells into LaTeX source
author	Counsell, Tom
author	Munn, Alan
copyright	Alan Munn (2009, 2010)
license	gpl = GNU General Public License (free)
version	1.1
description	(no language specified) The package provides a Ruby script–Applescript combination that allows the user to cut and paste spreadsheet tables (e.g., from Excel, Open Office Calc, iWork Numbers, etc.) into a LaTeX source file in various popular LaTeX table formats: plain tables, booktabs, longtable and raw cells. The package is designed to work with TeXShop, and can be used with other Mac editors that support Applescript. The package was developed for Mac OS 10.4 or later, but may be portable to other operating systems.

1417 csvmerge – Merge TeX code with csv data

Web page on CTAN <https://ctan.org/pkg/csvmerge>

name	csvmerge
caption	Merge TeX code with csv data
author	Taylor, Laurence R
copyright	Laurence R Taylor (2019)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0
description	(no language specified) This package provides macros for processing a csv spreadsheet file with a minimum of configuration for the csv file. The first row names the columns and the remaining rows are data. This data can be merged with TeX code residing in an auxiliary file and the process repeated for each data row. There is one macro to set things up, one to extract the data, and one to tell if the field is empty or not. The documentation contains examples.

1418 csvsimple – Simple CSV file processing

Web page on CTAN <https://ctan.org/pkg/csvsimple>

name	csvsimple
caption	Simple CSV file processing
author	Sturm, Thomas F.
copyright	Thomas F. Sturm (2008-2024)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.7.1 (2026-04-27)
last changes	2026-04-27
year	2026
description	(no language specified) The package provides a simple LaTeX interface for the processing of files with comma separated values (CSV); it relies on the key value syntax supported by pgfkeys to simplify usage. Filtering and table generation are especially supported; however, this lightweight tool offers no support for data sorting or data base storage. The package depends on etoolbox , ifthen , pgfrcs , pgfkeys , and shellesc .

1420 *csvtools* – Reading data from CSV files

Web page on CTAN <https://ctan.org/pkg/csvtools>

name	csvtools
caption	Reading data from CSV files
author	Talbot, Nicola
license	lppl = The LaTeX Project Public License (free)
version	1.24
description	(no language specified) The csvtools package allows you to repeatedly perform a set of LaTeX commands on data in each row of a comma separated variable (CSV) file (though substitution of the ‘comma’ is permitted). Such files may be used as source for mail merging, generating tables etc. Examples are given in the documentation.

The distribution also provides packages:

- *csvsort* , that provides analogous commands to those in the main package, having first sorted the data (using the *xfor* and *compare* packages); and
- *csvpie* , for creating a pie-chart from a CSV file.

The bundle has now been superseded by the *datatool* bundle.

1422 *ctable* – Flexible typesetting of table and figure floats using key/value directives

Web page on CTAN <https://ctan.org/pkg/ctable>

name	<code>ctable</code>
caption	Flexible typesetting of table and figure floats using key/value directives
author	Dekker, Wybo H.
copyright	Wybo Dekker (2021)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.33 (2025-10-22)
last changes	2025-10-22
year	2025
description	(no language specified) Provides commands to typeset centered, left- or right-aligned table and (multiple-)figure floats, with footnotes. Instead of an environment, a command with 4 arguments is used; the first is optional and is used for key,value pairs generating variations on the defaults and offering a route for future extensions.

1423 ctablestack – Catcode table stable support

Web page on CTAN <https://ctan.org/pkg/ctablestack>

name	ctablestack
caption	Catcode table stable support
author	The LaTeX Project Team
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0 (2015-10-01)
last changes	2015-10-01
year	2015
description	(no language specified) This package provides a method for defining category code table stacks in LuaTeX. It builds on code provided by the 2015/10/01 release of LaTeX2e (also available as ltuatex.sty for plain users). It is required by the luatexbase package (v1.0 onward) which uses ctablestack to provide a back-compatibility form of this concept.

1424 ctn-bibdata – Bibliography data for all CTAN packages

Web page on CTAN <https://ctan.org/pkg/ctan-bibdata>

name	ctan-bibdata
caption	Bibliography data for all CTAN packages
author	Voß, Herbert
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.01
description	(no language specified) All CTAN packages are saved as bibdata with the entry type <code>@manual</code>, which can easily be changed by any editor via the <code>replace</code> function. For the old BibTeX program you have to define your bibliography style file, eg <code>ctan.bst</code>. For Biber resp. BibLaTeX there exists an own <code>ctan.bbx</code> file which uses the data fields: <code>title</code>, <code>subtitle</code>, <code>author</code>, <code>date</code>, <code>version</code>, <code>license</code>, <code>url</code>, <code>pkgurl</code>, <code>note</code>. <code>ctan.bbx</code> is based on <code>authortitle</code> which can be changed easily in the file. The file <code>ctan.bib</code> will be updated on a daily basis.

1425 `ctan-o-mat` – Upload or validate a package for CTANWeb page on CTAN <https://ctan.org/pkg/ctan-o-mat>name `ctan-o-mat`

caption Upload or validate a package for CTAN

author Neugebauer, Gerd

copyright Gerd Neugebauer (2016-2017)

license `bsd3` = 3-clause BSD License (free)

version 1.2

description (no language specified) This program can be used to automate the upload of a package to CTAN. The description of the package is contained in a configuration file.

The provided information is validated in any case. If the validation succeeds and not only the validation is requested, then the provided archive file will be placed in the incoming area of the CTAN for further processing by the CTAN team.

In any case any finding during the validation is reported at the end of the processing. Note that the validation is the default and an official submission has to be requested by an appropriate command line option.

`ctan-o-mat` requires an Internet connection to the CTAN server. Even the validation retrieves the known attributes and the basic constraints from the server.

1428 *ctanify* – Prepare a package for upload to CTAN

Web page on CTAN <https://ctan.org/pkg/ctanify>

name	ctanify
caption	Prepare a package for upload to CTAN
author	Pakin, Scott
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.9.1
description	(no language specified) Given a list of filenames, <i>ctanify</i> creates a tarball (a .tar.gz file) with the files laid out in CTAN's preferred structure. By default this tarball additionally contains a ZIP (.zip) file with copies of all files laid out in the standard TeX Directory Structure (TDS), which may be used by those intending to install the package, or by those who need to incorporate it in a distribution. (The TDS ZIP file will be installed in the CTAN <code>install/ tree</code>.) Given that CTAN and TeX Live are not fond of .tds.zip files for small and/or otherwise straightforward packages, <i>ctanify</i> has now been provided with an option that prevents the creation and inclusion of such a .tds.zip file.

version	1.0 (2024-03-14)
last changes	2024-03-14
year	2024

description	(no language specified) The package provides macros holding file name information (directory, base name, extension, full name and full path) for files read by LaTeX <code>\input</code> and <code>\include</code> macros; it uses the file hooks provided by the author's filehook . In particular, it restores the parent file name after the trailing <code>\clearpage</code> of an <code>\include</code> d file; as a result, the macros may be usefully employed in the page header and footer of the last printed page of such a file. The depth of inclusion is made available, together with the "parent" (including file) and "parents" (all including files to the root of the tree). The package supersedes FiNK .

1445 *curve* – A class for making curriculum vitae

Web page on CTAN <https://ctan.org/pkg/curve>

name	CurVe
caption	A class for making curriculum vitae
author	Verna, Didier
copyright	Didier Verna (2000-2008)
license	lpl = The LaTeX Project Public License (free)
version	1.16
description	(no language specified) CurVe is a class for writing a CV, with configuration for the language in which you write. The class provides a set of commands to create rubrics, entries in these rubrics etc. CurVe then format the CV (possibly splitting it onto multiple pages, repeating the titles etc), which is usually the most painful part of CV writing. Another nice feature of CurVe is its ability to manage different CV ‘flavours’ simultaneously. It is often the case that you want to maintain slightly divergent versions of your CV at the same time, in order to emphasize on different aspects of your background. CurVe also comes with support for use with AUC-TeX.

1447 *curves* – Curves for LaTeX picture environment

Web page on CTAN <https://ctan.org/pkg/curves>

name curves

caption Curves for LaTeX picture environment

author Maclaine-Cross, Ian

copyright Ian Maclaine-cross (1991-2017)

license lpl1.3 = The LaTeX Project Public License 1.3 (free)

version 1.55 (2017-08-25)

last changes 2017-08-25

year 2017

description (no language specified) This package draws curves in the standard LaTeX picture environment using parabolas between data points with continuous slope at joins; for circles and arcs, it uses up to 16 parabolas. The package can also draw symbols or dash patterns along curves.

The package provides facilities equivalent to technical pens with compasses and French curves. Curves consist of short secants drawn by overlapping disks or line-drawing `\special` commands selected by package options.

1457 cweb – A Web system in C

Web page on CTAN <https://ctan.org/pkg/cweb>

name cweb

caption A Web system in C

author Scherer, Andreas

author Levy, Silvio

author Knuth, Donald E.

copyright Silvio Levy and Donald E. Knuth (null)

license knuth = Knuth License (free)

version 4.12.2

description (no language specified) The CWEB system is a system for literate programming, also known as structured software documentation, with code written in the C and C++ languages.

People have been accumulating several decades of experience with CWEB, and CTANGLE and CWEAVE are known to work reasonably well on numerous platforms. In general those programs are now entirely stable: DEK won't be changing them any more, because they've proved their value in extensive use. (Henceforth he must devote full time to "The Art of Computer Programming"!)

However, further significant developments, including versions that DEK himself does not maintain, are ongoing. All of the really current news about CWEB is, in fact, now to be found in the CWEB development project, thanks to the tireless activities of Andreas Scherer.

The first new release under his auspices incorporates the majority of material from his [CWEBbin project](#), namely all the patches accumulated over many years, and all the changes for ANSI-C. What's left in CWEBbin are a few extensions used in TeX Live:

- includes CTWILL and its utilities
- internationalization with the "GNU gettext utilities"
- output is only written when different from the former run
- new options -l, -i, and -o for CWEAVE and CTWILL
- file lookup with the kpathsea library (TeX Live only)

and it provides tools to bundle packages for various target systems.

1459 *cwebbin* – CWEB for ANSI-C/C++ compilers

Web page on CTAN <https://ctan.org/pkg/cwebbin>

name	cwebbin
caption	CWEB for ANSI-C/C++ compilers
author	Scherer, Andreas
copyright	Hans-Hermann Bode (1991-1993)
copyright	Klaus Guntermann (1992)
copyright	Andreas Scherer (1993-2000, 2005, 2011, 2018-2021)
copyright	Carsten Steger (1991, 1993)
license	knuth = Knuth License (free)
description	(no language specified) A highly portable and extended version of Levy/Knuth CWEB 3.64c for UNIX, Windows, Mac (and possibly other operating systems). TeX macros, CWEB macros, and NLS catalogs are included for German, French (partially), and Italian program documentation on any machine.

Major features:

- Thoroughly updated code base; several bug fixes; clean compilation (with both C and TeX) on at least four different architectures.
- Added CTWILL program with tools and utilities for brave users; including introductory manpage.
- Internationalization of CTANGLE, CWEAVE, and CTWILL with "GNU gettext utilities".
- New code base for CWEB in TeX Live 2019, incorporating all features of the TL 2018 version and adding new features from CWEBbin.

As of November 2019 CTAN no longer holds a copy of this material. Please go to the package's [github repository](#) for more information.

1463 `cybercic` – “Controls in Contents” for the `cyber` package

Web page on CTAN <https://ctan.org/pkg/cybercic>

name	<code>cybercic</code>
caption	“Controls in Contents” for the <code>cyber</code> package
author	Jennings, Jared
license	mit = MIT License (free)
version	2.1 (2015-06-24)
last changes	2015-06-24
year	2015
description	(no language specified) This package is used in concert with the <code>cyber</code> package to make documents with annotations of compliance with cybersecurity requirements. “cic” stands for “Controls in Contents”, and when you include this package, some notations of compliance are added to section names as seen in the table of contents of the final document. It also makes your document more brittle in unexpected ways: for example, when you use <code>cybercic</code> in the same document as <code>hyperref</code>, you cannot use

	any formatting in your section titles. So don't use <code>cybercic</code> unless you need to.

1464 *cyklop* – The Cyclop typeface

Web page on CTAN <https://ctan.org/pkg/cyklop>

name	<code>cyklop</code>
caption	The Cyclop typeface
author	Nowacki, Janusz Marian
copyright	Janusz M. Nowacki (2008)
license	gfl = The GUST Font License (GFL) (free)
version	0.915
description	(no language specified) The Cyclop typeface was designed in the 1920s at the workshop of Warsaw type foundry "Odlewnia Czcioneck J. Idzkowski i S-ka". This sans serif typeface has a highly modulated stroke so it has high typographic contrast. The vertical stems are much heavier than horizontal ones. Most characters have thin rectangles as additional counters giving the unique shape of the characters. The lead types of Cyclop typeface were produced in slanted variant at sizes 8-48 pt. It was heavily used for heads in newspapers and accidents prints. Typesetters used Cyclop in the inter-war period, during the occupation in the underground press. The typeface was used until the beginnings of the offset

print and computer typesetting era. Nowadays it is hard to find the metal types of this typeface.

The font was generated using the Metatype1 package. Then the original set of characters was completed by adding the full set of accented letters and characters of the modern Latin alphabets (including Vietnamese).

The upright variant was generated and it was more complicated task than it appeared at the beginning. 11 upright letters of the Cyclop typeface were presented in the book by Filip Trzaska, "Podstawy techniki wydawniczej" ("Foundation of the publishing technology"), Warsaw 1967. But even the author of the book does not know what was the source of the presented examples.

The fonts are distributed in the Type1 and OpenType formats along with the files necessary for use these fonts in TeX and LaTeX including encoding definition files: T1 (ec), T5 (Vietnamese), OT4, QX, texnansi and nonstandard ones (IL2 for Czech fonts).

Web page on CTAN <https://ctan.org/pkg/cyrillic-modern>

name	cyrillic-modern
caption	Slightly modified computer modern fonts with Cyrillics
author	Panov, Andrey
copyright	Andrey V. Panov (2013, 2014)
license	ofl = The SIL Open Font License (free)

version	0.4 (2014-12-26)
last changes	2014-12-26
year	2014
description	(no language specified) The Cyrillic Modern fonts are based on the Computer Modern fonts designed in Metafont by D. E. Knuth and released in Type 1 format by the American Mathematical Society under the SIL Open Font License (OFL). The Cyrillic Modern fonts are intended to make the Cyrillic letters with classical shapes typical to the modern fonts. Currently, the fonts add support for the Russian language, the numero sign and quotation marks required for Russian typesetting.

1480 dashrule – Draw dashed rules

Web page on CTAN <https://ctan.org/pkg/dashrule>

name	dashrule
caption	Draw dashed rules
author	Pakin, Scott
license	lppl = The LaTeX Project Public License (free)
version	1.3
description	(no language specified) The dashrule package makes it easy to draw a huge variety of dashed rules (i.e., lines) in LaTeX. dashrule provides a command, <code>\hdashrule</code> , which is a cross between LaTeX's <code>\rule</code> and PostScript's <code>setdash</code> command. <code>\hdashrule</code> draws horizontally dashed rules using the same syntax as <code>\rule</code> , but with an additional, <code>setdash</code> -like parameter that specifies the pattern of dash segments and the space between those segments. Because dashrule's rules are constructed internally using <code>\rule</code> (as opposed to, e.g., PostScript <code>\special s</code>) they are fully compatible with every LaTeX back-end processor.

1484 datatool – Tools to load and manipulate data

Web page on CTAN <https://ctan.org/pkg/datatool>

name	datatool
caption	Tools to load and manipulate data
author	Talbot, Nicola
copyright	Nicola Talbot (2007-2025)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	3.4 (2025-04-03)
last changes	2025-04-03
year	2025
description	(no language specified) The tools comprise the packages: • <code>datatool-base.sty</code> : the underlying base package used by all the other packages in this bundle; • <code>datatool.sty</code> : databases may be created using LaTeX commands or by importing external files; they may be sorted numerically or alphabetically; repetitive operations (such as mail merging) may be performed on each row of a database, subject to conditions to exclude particular rows; commands are provided to examine database elements, and to convert formats (for example, to convert a numeric element to a format compatible with l3fp or the <code>fp</code> package); • <code>datapie.sty</code> : a database may be represented as a pie chart; flexible options allow colouring of the chart, and annotation hooks are available; • <code>dataplot.sty</code> : a database may be represented as a 2-dimensional scatter or line plot; flexible options control of the plot's overall appearance, and of legends and other extra information; • <code>databar.sty</code> : a database may be represented as a bar chart; overall appearance, colouring and annotation are controllable; • <code>datagidx.sty</code> : provides a way of indexing or creating glossaries/lists of abbreviations that uses TeX to do the sorting and collating instead of using an external indexing application, such as <code>xindy</code> or <code>makeindex</code> (although you may prefer <code>\printnoidxglossary</code> now provided by the <code>glossaries</code> package); • <code>databib.sty</code> : a bibliography may be loaded into a datatool database, and manipulated there before being printed (this permits a LaTeX-based route to printing bibliographies in formats for which no BibTeX style is available, although <code>biblatex</code> is now the better route); and

- `person.sty` : provides support for displaying a person’s name and pronoun in a document, thus avoiding cumbersome use of ”he/she”, etc.

The drawing packages make use of **PGF/TikZ** for their output.

Localisation support needs to be installed separately. See **datatool-regions** and **datatool-english** .

The bundle supersedes and replaces the author’s **csvtools** bundle.

1485 datatool-english – English language support for datatool.sty v3.0+

Web page on CTAN <https://ctan.org/pkg/datatool-english>

name	datatool-english
caption	English language support for datatool.sty v3.0+
author	Talbot, Nicola
copyright	Nicola Talbot (2025)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.1 (2025-03-12)
last changes	2025-03-12
year	2025
description	(no language specified) The datatool-english bundle provides English language support for the datatool package (v3.0+). The *.ldf files should all be placed somewhere on TeX's path. These files don't require any explicit loading. They will automatically be input by <code>datatool-base.sty</code> (or relevant supplementary package) if they are found and required by the tracklang localisation settings. See the datatool v3.0+ and tracklang user manuals for further details. The English files provide encoding support for UTF-8 and ISO-8859-1 (Latin 1). Any other encoding will be treated as US-ASCII. This bundle also includes limited support for Old English (Anglo-Saxon) mainly to provide an example for a language that has multiple scripts (in this case, Latin and Runic) or for a language that has an extended Latin or non-Latin script. The language codes are <code>ang-Latn</code> for Anglo-Saxon Latin Script and <code>ang-Runr</code> for Anglo-Saxon Runic Script. There's only support for UTF-8 with the Anglo-Saxon files.

1486 `datatool-regions` – Region (numeric) support for `datatool` v3.0+

Web page on CTAN <https://ctan.org/pkg/datatool-regions>

name	<code>datatool-regions</code>
caption	Region (numeric) support for <code>datatool</code> v3.0+
author	Talbot, Nicola
copyright	Nicola Talbot (2025)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0
description	(no language specified) The <code>datatool-regions</code> bundle provides the language-independent region ldf files for the datatool package (v3.0+). The <code>*.ldf</code> files should all be placed on TeX's path. These files don't require any explicit loading. They will automatically be input by <code>datatool-base.sty</code> (or relevant supplementary package) if they are found and required by the <code>tracklang</code> localisation settings. See the <code>datatool</code> v3.0+ and <code>tracklang</code> user manuals for further details. The region files deal with defining the currency symbol, and may additionally (if not dependent on the language) set the number group and decimal characters, and provide functions for parsing numeric dates and times. If a pre-3.0 version of <code>datatool</code> is installed, these ldf files will be ignored.

1491 *datepicker-pro* – Create a popup datepicker using SWF

Web page on CTAN <https://ctan.org/pkg/datepicker-pro>

name *datepicker-pro*

caption Create a popup datepicker using SWF

author Story, Donald P.

copyright D. P. Story (2013-2018)

license lpl1.2 = The LaTeX Project Public License 1.2 (free)

version 1.4 (2020-08-07)

last changes 2020-08-07

year 2020

description (no language specified) One of the (many) deficiencies of Adobe Acrobat Reader/Adobe Acrobat is that they have never supported a proper date picker. This package now supplies one. The `\datepicker` command creates a readonly text field and a push button to its right. Pressing on the pushbutton brings forth an SWF file displaying a calendar. The user then chooses a date from the calendar, and the date is transferred to the text field.

This is a "pro" application, which, in the jargon of AeB, means that Adobe Distiller is required as the PDF creator. The only drivers supported, as a result, are dvips and dvipsone.

As with all such special features, to experience the datepicker, Adobe Reader or Acrobat are needed. Most other PDF readers do not support form field, rich media annotations, and JavaScript.

This package has become obsolete as of December 2020. Since December 2020, Adobe no longer supports Flash player (SWF, FLV). This package uses a custom SWF file (`datepicker3.swf`, eg); as a result this package will no longer function in Adobe Acrobat Reader DC. The package will continue to produce PDFs as designed, but only if built using Acrobat XI (or a version of Acrobat prior to December 2020) and viewed in Adobe Acrobat Reader XI (or a version of Reader prior to December 2020).

1496 datetime2 – Formats for dates, times and time zones

Web page on CTAN <https://ctan.org/pkg/datetime2>

name	datetime2
caption	Formats for dates, times and time zones
author	Talbot, Nicola
copyright	Nicola Talbot (2015-2021)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.5.7 (2021-03-21)
last changes	2021-03-21
year	2021
description	(no language specified) This package provides commands for formatting dates, times and time zones and redefines <code>\today</code> to use the same formatting style. In addition to <code>\today</code>, you can also use <code>\DTMcurrenttime</code> (current time) or <code>\DTMnow</code> (current date and time). Dates and times can be saved for later use. The accompanying <code>datetime2-calc</code> package can be used to convert date-times to UTC+00:00. Language and regional support is provided by independently maintained and installed modules. The <code>datetime2-calc</code> package uses the <code>pgfcalendar</code> package (part of the PGF/TikZ bundle). This package replaces datetime.sty which is now obsolete.

version	1.0 (2015-04-01)
last changes	2015-04-01
year	2015
description	(no language specified) English date and time styles that use words for the numbers and ordinals. This package provides the following date and time styles: "en-fulltext", "en-FullText", "en-FULLTEXT", and the additional time style "en-Fulltext". (The date equivalent can be obtained through commands like <code>\Today</code>.) Unlike the base styles provided by datetime2.sty, these styles aren't expandable styles. This means that you can't use the date or time in PDF bookmarks or in the argument of certain commands, such as <code>\MakeUppercase</code>, while these styles are in use.
