1547 dbshow – A package to store and display data with custom filters, orders, and styles

Web page on CTAN <https://ctan.org/pkg/dbshow>

name	dbshow
caption	A package to store and display data with custom filters, orders, and styles
author	Li, Changkai
copyright	Li Changkai (2022)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.5 (2022-01-17)
last changes	2022-01-17
year	2022
description	(no language specified) The package provides four core functions: 1. data storage and display

2. data filtering
3. data sorting
4. data display

All data is saved once and then you can display these data with custom filters, orders and styles. The package can be used, for example, to record and display something you'd like to review, maybe the question you always answered incorrectly or some forgettable knowledge. But obviously, the package is much more powerful and extensible for more interesting tasks depending on the individual.

version	2.6 (2025-06-13)
last changes	2025-06-13
year	2025
description	(no language specified) The LaTeX class <code>ijdc-v14</code> produces camera-ready papers and articles suitable for inclusion in the International Journal of Digital Curation, with applicability from volume 14 onwards; a legacy class <code>ijdc-v9</code> is provided for papers and articles written for volumes 9-13. The similar <code>idcc</code> class can be used for submissions to the International Digital Curation Conference, beginning with the 2015 conference. As of August 2023 these classes are no longer officially supported for new submissions to the IJDC and IDCC, but nevertheless they continue to be maintained to support existing documents.

1551 dcounter – Support dynamic counters

Web page on CTAN <https://ctan.org/pkg/dcounter>

name	dcounter
caption	Support dynamic counters
author	Rozhenko, Alexander I.
copyright	Alexander I. Rozhenko (1998-2005)
license	lppl = The LaTeX Project Public License (free)
version	1.2

description	(no language specified) Counters declared as dynamic are created at the time of their first use and they receive at that moment the count style which was established by the <code>\countstyle</code> command. Special use of the <code>\countstyle</code> command with an optional parameter allows modification of the subordination of existing counters. This package is part of the ncctools bundle.

1552 dcpic – Commutative diagrams in a LaTeX and TeX documents

Web page on CTAN <https://ctan.org/pkg/dcpic>

name	DCpic
caption	Commutative diagrams in a LaTeX and TeX documents
author	Quaresma, Pedro
copyright	Pedro Quaresma (1990-2013)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	5.0.0
description	(no language specified) DCpic is a package for typesetting Commutative Diagrams within a LaTeX and TeX documents. Its distinguishing features are: a powerful graphical engine, the PiCTeX package; an easy specification syntax in which a commutative diagram is described in terms of its objects and its arrows (morphism), positioned in a Cartesian coordinate system.

1558 *decision-table* – An easy way to create Decision Model and Notation decision tables

Web page on CTAN <https://ctan.org/pkg/decision-table>

name	<code>decision-table</code>
caption	An easy way to create Decision Model and Notation decision tables
author	Pantigny, François
author	Vandevælde, Simon
copyright	Simon Vandevælde, Francois Pantigny (2020-2021)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.0.4 (2021-10-01)
last changes	2021-10-01
year	2021
description	(no language specified) The <code>decision-table</code> package allows for an easy way to generate decision tables in the Decision Model and Notation (DMN) format. This package ensures consistency in the tables (i.e. fontsize), and is thus a better alternative to inserting tables via images. The <code>decision-table</code> package adds the <code>\dmntable</code> command, with which tables can be created. This command expands into a <code>tabular</code>, so it can be used within a table or figure environment. Furthermore, this allows labels and captions to be added seamlessly. It is also possible to place multiple DMN tables in one table/figure environment. The package relies on nicematrix and l3keys2e.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/decision-table/README

keyword	label-ref (label and reference systems)
language(s)	no language specified
year	1998
last access	2025-02-07

1574 *delig* – Disable misplaced ligatures in LaTeX documents

Web page on CTAN <https://ctan.org/pkg/delig>

name	<i>delig</i>
caption	Disable misplaced ligatures in LaTeX documents
author	Warner, Daniel
license	gpl = GNU General Public License (free)
version	(2008-03-12)
last changes	2008-03-12
year	2008
description	(no language specified) DeLig disables misplaced ligatures in LaTeX documents, using a dictionary approach. With its original fonts, LaTeX always uses ligatures for the letter combinations "ff", "fi", "fl", "ffi" and "fff". This is not always correct in the German language, e.g., the word "Auflage" may not be printed with an "ff"-ligature, that is, the "ff"-ligature in "Auflage" must be disabled. This may be accomplished by using the babel-package and the two symbols " : Auf"lage . The Java program DeLig does this job automatically for you, using a ligature word list. Please note that DeLig is only as good as the ligature word list file DeLig.list it relies on. This version is intended for German language texts only. DeLig is partially based on the Perl script <i>rmligs</i> by Björn Jacke, in particular the wordlist data is based on his <i>igerman98</i> dictionary.

1583 derivative – Nice and easy derivatives

Web page on CTAN	https://ctan.org/pkg/derivative
name	derivative
caption	Nice and easy derivatives
author	Jensen, Simon
copyright	Simon Jensen (2019-2024)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.4 (2024-02-08)
last changes	2024-02-08
year	2024
description	(no language specified) Typesetting derivatives and differentials in a consistent way are clumsy and require care to ensure the preferred formatting. Several packages have been developed for this purpose, each with its own features and drawbacks, with the most ambitious one being <code>diffcoeff</code>. While this package is comparable to <code>diffcoeff</code> in terms of features, it takes a different approach. One difference is this package provides more options to tweak the format of the derivatives and differentials. However, the automatic calculation of the total order isn't as developed as the one in <code>diffcoeff</code>. This package makes it easy to write derivatives and differentials consistently with its predefined commands. It also provides a set of commands that can define custom derivatives and differential operators. The options follow a consistent naming scheme making them easy to use and understand.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/derivative/README.md

1586 *detex* – Strip TeX from a source file

Web page on CTAN <https://ctan.org/pkg/detex>

name	detex
caption	Strip TeX from a source file
author	Trinkle, Daniel
license	other-free = Free license not otherwise listed (free)
version	(1999-05-12)
last changes	1999-05-12
year	1999
description	(no language specified) Detex is a program to remove TeX constructs from a text file. It recognizes the <code>\input</code> command. The program assumes it is dealing with LaTeX input if it sees the string <code>\begin{document}</code> in the text. In this case, it also recognizes the <code>\include</code> and <code>\includeonly</code> commands. The author now considers this program to be "retired" and Piotr Kubowicz's OpenDetex as its successor.
home page	http://www.cs.purdue.edu/homes/trinkle/detex/

1593 dhua – German abbreviations using thin space

Web page on CTAN	https://ctan.org/pkg/dhua
name	<code>dhua</code>
caption	German abbreviations using thin space
author	Lück, Uwe
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.11
description	(English) The package provides commands for those abbreviations of German phrases for which the use of thin space is recommended. Setup commands <code>\newdhua</code> and <code>\newtwopartdhua</code> are provided, as well as commands for single cases (such as <code>\zB</code> for ‘z. B.’, saving the user from typing such as ‘z.\,B.’). To typeset the documentation, the nicedverb package, version 0.44, or later, is required.
description	(German) Das Paket ‘dhua’ stellt Befehle für sog. mehrgliedrige Abkürzungen bereit, für die schmale Leerzeichen (Festabstände) empfohlen werden (Duden, Wikipedia). In die englische Paketdokumentation sind deutsche Erläuterungen eingestreut.

1594 *diabetes-logbook* – A logbook for people with type one diabetes

Web page on CTAN <https://ctan.org/pkg/diabetes-logbook>

name	diabetes-logbook
caption	A logbook for people with type one diabetes
author	Grigorov, Viktor
license	other-free = Free license not otherwise listed (free)
version	(2018-07-22)
last changes	2018-07-22
year	2018
description	(no language specified) Initially a logbook for me, a person with type one diabetes mellitus, this evolved over time into a TeX project, making it prettier and/or easier to use. I've made it simple to use, while not forgoing the document's beauty or the speed of input. The logbook, with slight commenting out and editing, could be used as a journal by anybody, although the template and graphing functionality are set up for people using insulin injections and blood glucose teststrips, as well as counting/estimating carbs, protein, and fat. Note: The names of the package's files are not constructed using the long "diabetes-logbook", but the acronym "dmlb" (for "diabetes mellitus log book").

version	1.1 (2015-05-20)
last changes	2015-05-20
year	2015

description	(no language specified) The diadia package allows you to keep a diabetes diary. Usually, this means keeping record of certain medical values like blood sugar, blood pressure, pulse or weight. It might also include other medical, pharmaceutical or nutritional data (HbA1c, insulin doses, carbohydrate units). The diadia package supports all of this plus more - simply by adding more columns to the data file! It is able to evaluate the data file and typesets formatted tables and derived plots. Furthermore, it supports medication charts and info boxes. Supported languages: English, German. Feel free to provide other translation files!

1600 *diagramf* – Labelled diagrams in Metafont

Web page on CTAN	https://ctan.org/pkg/diagramf
name	diagramf
caption	Labelled diagrams in Metafont
author	Gibbons, Jeremy
author	Jeffrey, Alan
license	noinfo = noinfo
version	1.1
description	(no language specified) The package provides a means of labelling diagrams each produced as a Metafont character in a ‘font’ which is produced using the <i>diagramf.mf</i> Metafont package. LaTeX passes data to Metafont (by ordinary LaTeX file-writing mechanisms), and Metafont writes stuff into its log-file, which must then be extracted into a different file so that LaTeX can see it.

1608 *didactic* – Tools for writing teaching material

Web page on CTAN	https://ctan.org/pkg/didactic
name	<i>didactic</i>
caption	Tools for writing teaching material
author	Bosk, Daniel
copyright	Daniel Bosk (2019-2020, 2022, 2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.7 (2024-04-08)
last changes	2024-04-08
year	2024

description	(no language specified) This package provides macros and environments useful for writing teaching material. It provides more semantic environments on top of the standard <code>definition</code>, <code>theorem</code>, and <code>friends</code>: for instance, <code>exercise</code>, <code>activity</code> and <code>question</code>. These are suitably colour-coded when used with Beamer. They occur as "normal" text in handouts produced by <code>beamerarticle</code> (same style as <code>definition</code> usually has). It also provides macros for typesetting code listings and output side by side. Finally, it modifies the appearance of beamer (Berlin-based theme) and memoir (Tufte style layout), if loaded. It is designed to be used with beamer to produce slides and <code>beamerarticle</code> with memoir to produce notes and handouts from the same source.

1611 digestif – Editor plugin for LaTeX, ConTeXt etc

last changes	2025-12-19
year	2025
description	(no language specified) This package allows the easy and consistent writing of ordinary, partial and other derivatives of arbitrary (algebraic or numeric) order. For mixed partial derivatives, the total order of differentiation is calculated by the package. Optional arguments allow specification of points of evaluation (ordinary derivatives), or variables held constant (partial derivatives), and the placement of the differentiant (numerator or appended). The package is built on xtemplate and the configurability it enables, extending to differentials (including simple line elements) and jacobians.

1613 *digiconfigs* – Writing ”configurations”

description	(no language specified) The digicap-pro package creates captions to digital photos or graphics and selectively places them on top with a selected opacity. Captions can be static or they can be rollovers. As a bonus, the document author can create a photo album complete with thumbnail versions of the photos, which when clicked, the fullsize photo appears with caption and title. Adobe Distiller is required.

1613 *digiconfigs* – Writing ”configurations”

Web page on CTAN	https://ctan.org/pkg/digiconfigs
name	digiconfigs
caption	Writing ”configurations”
author	Madsen, Lars
license	lppl = The LaTeX Project Public License (free)
version	0.5

description	(no language specified) In Stochastic Geometry and Digital Image Analysis some problems can be solved in terms of so-called "configurations". A configuration is basically a square matrix of <code>\circ</code> and <code>\bullet</code> symbols. This package provides a convenient and compact mechanism for displaying these configurations.

1618 *dinbrief* – German letter DIN styleWeb page on CTAN <https://ctan.org/pkg/dinbrief>name *dinbrief*

caption German letter DIN style

author Gussmann, Richard

author Braune, Klaus Dieter

license lppl = The LaTeX Project Public License (free)

description (no language specified) Implements a document layout for writing letters according to the rules of DIN (Deutsches Institut für Normung, German standardisation institute). A style file for LaTeX 2.09 (with limited support of the features) is part of the package. Since the letter layout is based on a German standard, the user guide is written in German, but most macros have English names from which the user can recognize what they are used for. In addition there are example files showing how letters may be created with the package.

A graphical interface for use of the *dinbrief* is provided in the [dinbrief-GUI](#) bundle.

documentation (English) *Package Readme*: <https://ctan.org/tex-archive/macros/latex/contrib/dinbrief/readme>

1624 dirtreex – Directory tree rendering for LaTeX with TikZ

Web page on CTAN <https://ctan.org/pkg/dirtreex>

name	dirtreex
caption	Directory tree rendering for LaTeX with TikZ
author	CloudCauldron
license	lpp1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0 (2026-04-26)
last changes	2026-04-26
year	2026
description	(no language specified) This package provides a self-contained tool for rendering directory trees in an optionally breakable, fully styleable frame. Built directly on TikZ and zref, it works natively without requiring tcolorbox, dirtree, shell escape, or external scripts. Its main features include automatically tracked depth, so that <code>\dir</code> and <code>\file</code> commands can be nested naturally; breakable frames whose borders, background, and vertical connection lines continue across page boundaries; extensive customization with per-tree and per-entry settings for line colors, line widths, and elbow radii; and CJK-friendly operation with ctex and LuaTeX.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/dirtreex/README.md

1633 dktools – Tools and libraries by Dirk Krause

Web page on CTAN <https://ctan.org/pkg/dktools>

name dktools
 caption Tools and libraries by Dirk Krause
 author Krause, Dirk
 license bsd3 = 3-clause BSD License (free)
 description (no language specified) This bundle, which provides a number of tools and libraries by Dirk Krause, is no longer available on CTAN. It is now available only at [its SourceForge project page](#) .

The project does not contain any LaTeX packages, but source code to build executable programs. During the last years, many programs unrelated to LaTeX have been added. Therefore, the CTAN is no longer a suitable place to host the entire project.

The programs related to LaTeX are:

- `wxdkdraw` : Minimalistic drawing program for use with LaTeX
- `wxd2lat` : Convert `wxdkdraw` drawings to PDF+TeX, EPS+TeX, TeX (PGF)
- [bmpp](#) : Convert PNG, JPEG, TIFF to PDF, PS, EPS
- [fig2lat](#) : Convert *.fig to PS(+TeX), PDF(+TeX), PGF
- `dk-t2l` : Convert plain text to LaTeX
- `plpdfTeX` : Output driver for `octpgfpl` to produce PDF+TeX

1634 `dlfltxb` – Macros related to "Introduktion til LaTeX"

Web page on CTAN <https://ctan.org/pkg/dlfltxb>

name	<code>dlfltxb</code>
caption	Macros related to "Introduktion til LaTeX"
author	Madsen, Lars
license	lppl = The LaTeX Project Public License (free)
version	(2010-03-04)
last changes	2010-03-04
year	2010
description	(no language specified) The bundle contains various macros either used for creating the author's book "Introduktion til LaTeX" (in Danish), or presented in the book as code tips.

The bundle comprises:

- `dlfltxbcodetips`: various macros helpful in typesetting mathematics;
- `dlfltxbmarkup`: provides macros used throughout, for registering macro names, packages etc. in the text, in the margin and in the index, all by using categorised keys (note, a configuration file may be used; a sample is included in the distribution);
- `dlfltxbtocconfig`: macros for the two tables of contents that the book has;
- `dlfltxbmisc`: various macros for typesetting LaTeX arguments, and the macro used in the bibliography that can wrap a URL up into a BibTeX entry.

Interested parties may review the book itself on the web at [the author's institution](#) (it is written in Danish).

1639 dnsrecord – Typeset DNS records, zone files, propagation tables, and DNSSEC chains

Web page on CTAN <https://ctan.org/pkg/dnsrecord>

name	dnsrecord
caption	Typeset DNS records, zone files, propagation tables, and DNSSEC chains
author	Shaik, Vahid
copyright	Vahid Shaik (2026)

license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0.0 (2026-03-09)
last changes	2026-03-09
year	2026
description	(no language specified) A comprehensive LaTeX package for typesetting DNS (Domain Name System) data in technical documents. Provides 22 color-coded record type commands (A, AAAA, CNAME, MX, NS, TXT, SOA, PTR, SRV, CAA, DNSKEY, DS, RRSIG, NSEC, NSEC3, TLSA, HTTPS, SVCB, SPF, DKIM, DMARC), seven environments for zone file tables, propagation status displays, DNSSEC chain-of-trust diagrams, DNS health check reports, email authentication summaries, latency comparisons, and provider tables. Includes utility commands for formatting domains, IPs, TTLs with human-readable conversion, DNS response codes, and query flags. Designed for network engineers, system administrators, security researchers, and computer science academics writing papers, theses, and operational documentation.

1640 do-it-yourself-tex – Back to Plain XeTeX

Web page on CTAN <https://ctan.org/pkg/do-it-yourself-tex>

name	do-it-yourself-tex
caption	Back to Plain XeTeX
author	Herz-Fischler, Roger

license	pd = Public Domain Software (free)
version	1.3 (2019-03-17)
last changes	2019-03-17
year	2019
description	(no language specified) This package provides a collection of easily modifiable forms, macros and sample texts for use with plain TeX/XeTeX. Plain TeX, as demonstrated by the myriad of articles and books dating from before the advent of LaTeX, is capable of producing fine typography. It has the advantage of not being as obscure as far as macros, font designation etc. are concerned, and this package is intended to be another contribution to the repertoire in terms of macros, forms and examples. XeTeX, which works without the necessity of further manipulation of classical TeX documents, has the further advantage of understanding Unicode, for which many open source fonts are available. In addition, XeTeX's immediate output is an extended variant of DVI format, which is ordinarily processed by a tightly bound processor (called <code>xdvipdfmx</code>) that produces PDF, i.e. if you type: <code>xetex file_01.tex</code>, you obtain: <code>file_01.pdf</code>. This package provides easily modifiable forms and macros which illustrate how plain XeTeX can be used to produce high quality texts with such features as precise font designations, imported images, marginal notes, colour, right to left texts and syllabics. Real examples are provided in both the TeX and PDF versions. A set of shell files, font tables, and an HTML page with links to font sources are also provided.
documentation	(no language specified) <i>Package documentation</i>: https://ctan.org/tex-archive/macros/xetex/plain/do-it-yourself-tex/do-it-yourself-tex.pdf

1660 *domaincoloring* – Draw colored representations of complex functions

Web page on CTAN <https://ctan.org/pkg/domaincoloring>

name	domaincoloring
caption	Draw colored representations of complex functions
author	Voß, Herbert
copyright	Herbert Voß (2024)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.05 (2024-09-02)
last changes	2024-09-02
year	2024
description	(no language specified) Domain coloring is a technique to visualize complex functions by assigning a color to each point of the complex plane $z = x + i y$. This package calculates with the help of Lua any complex function to visualize its behaviour. The value of the complex function(z) can be described by radius and angle which can be two values of the hsv-color model, which then defines the color of each point in the complex plane $z = x + i y$.

version	1.0.1
description	(no language specified) The Domitian fonts are a free and open-source OpenType font family, based on the Palatino design by Hermann Zapf (1918-2015), as implemented in Palladio, the version distributed as part of URW's free Core 35 PostScript fonts (2.0). Domitian is meant as a drop-in replacement for Adobe's version of Palatino. It extends Palladio with small capitals, old-style figures and scientific inferiors. The metrics have been adjusted to more closely match Adobe Palatino, and hinting has been improved.

1664 `dot2tex` – Convert graphs generated by Graphviz to LaTeX friendly formats

Web page on CTAN <https://ctan.org/pkg/dot2tex>

name	<code>dot2tex</code>
caption	Convert graphs generated by Graphviz to LaTeX friendly formats
author	Fauske, Kjell Magne
copyright	Kjell Magne Fauske (2006-2007)
license	other-free = Free license not otherwise listed (free)
version	2.7.0
description	(no language specified) Dot2tex is a tool for converting graphs rendered by Graphviz to formats that can be used with LaTeX. The purpose of dot2tex is to give graphs generated by Graphviz a more LaTeX friendly look and feel. This is accomplished by converting xdot output from Graphviz to a series of TikZ and PGF , or PSTricks commands. This approach allows: • Typesetting labels with LaTeX, allowing mathematical notation; • Using native PSTricks and PGF/TikZ commands for drawing arrows; and • Using backend specific styles to customize the output. Dot2tex requires a Python interpreter v2.4 or better.
documentation	(no language specified) <i>Readme</i>: https://ctan.org/tex-archive/graphics/dot2tex/README
documentation	(no language specified) <i>Package documentation</i>: https://ctan.org/tex-archive/graphics/dot2tex/dot2tex.pdf

1665 dot2texi – Create graphs within LaTeX using the dot2tex tool

Web page on CTAN <https://ctan.org/pkg/dot2texi>

name	dot2texi
caption	Create graphs within LaTeX using the dot2tex tool
author	Fauske, Kjell Magne
copyright	Kjell Magne Fauske (2007-2008)
license	gpl = GNU General Public License (free)
version	3.0
description	(no language specified) The dot2texi package allows you to embed graphs in the DOT graph description language in your LaTeX documents. The dot2tex tool is used to invoke Graphviz for graph layout, and to transform the output from Graphviz to LaTeX code. The generated code relies on the TikZ and PGF package or the PSTricks package. The process is automated if shell escape is enabled.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/dot2texi/README

Web page on CTAN <https://ctan.org/pkg/dowith>

name	dowith
caption	Apply a command to a list of items
author	Lück, Uwe
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	r0.32 (2015-11-14)

1677 download – Allow LaTeX to download files using an external process

last changes	2015-11-14
year	2015
description	(no language specified) The package provides macros for applying a command to all elements of a list without separators, such as ‘<code>\DoWithAllIn{<cmd>}{<list-macro>}</code>’, and also for extending and reducing macros storing such lists. Applications in mind belonged to LaTeX, but the package should work with other formats as well. Loop and list macros in other packages are discussed. A further package, <code>domore</code>, is also provided, which enhances the functionality of <code>dowith</code>.

Web page on CTAN <https://ctan.org/pkg/dozenal>

name	dozenal
caption	Typeset documents using base twelve numbering (also called “dozenal”)
author	Goodman, Donald P.
copyright	Donald P. Goodman (2008-2018)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	7.2 (2018-05-11)
last changes	2018-05-11
year	2018
description	(no language specified) The package supports typesetting documents whose counters are represented in base twelve, also called “dozenal”. It includes a macro by David Kastrup for converting positive whole numbers to dozenal from decimal (base ten) representation. The package also includes a few other macros and redefines all the standard counters to produce dozenal output. Fonts, in Roman, italic, slanted, and boldface versions, provide ten and eleven (the Pitman characters preferred by the Dozenal Society of Great Britain). The fonts were designed to blend well with the Computer Modern fonts, and are available both as Metafont source and in Adobe Type 1 format.

Web page on CTAN <https://ctan.org/pkg/draftwatermark>

name	draftwatermark
caption	Put a grey textual watermark on document pages
author	Callegari, Sergio
copyright	Sergio Callegari (2006-2020)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	3.3 (2024-03-04)
last changes	2024-03-04
year	2024
description	(no language specified) The package provides a means to add a watermark (typically a light gray piece of text) on every page or on the first page of a document. Typical usage may consist in writing words such as DRAFT or CONFIDENTIAL across document pages. The package performs a similar function to that of draftcopy, but its implementation is output device independent. As of December 2020, the package relies on the new shipout hooks directly provided by LaTeX. For users of older versions of LaTeX, the package also provides a legacy version of itself (that is automatically loaded, currently being at release 2.3) which relies on the everypage package. Note that this legacy version will progressively lag behind in terms of features.

version 1.2e
description (no language specified) This package is intended for typesetting drama of any length. It provides two environments for typesetting dialogues in prose or in verse; new document divisions corresponding to acts and scenes; macros that control the appearance of characters and stage directions; and automatic generation of a 'dramatis personae' list.

Web page on CTAN <https://ctan.org/pkg/drm>

name	drm
caption	A complete family of fonts written in Metafont
author	Goodman, Donald P.
copyright	Donald P. Goodman III (2014)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	4.4

description	(no language specified) The package provides access to the DRM (Don’s Revised Modern) family of fonts, which includes a variety of optical sizes in Roman (in four weights), italic, and small caps, among other shapes, along with a set of symbols and ornaments. It is intended to be a full-body text font, but its larger sizes can also be used for simple display purposes, and its significant body of symbols can stand on its own. It comes complete with textual (“old-style”) and lining figures, and even has small-caps figures. It also comes with extensible decorative rules to be used with ornaments from itself or other fonts, along with an extremely flexible ellipsis package.

name	droid
caption	LaTeX support for the Droid font families
author	El Morabity, Mohamed
author	Matteson, Steve
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
license	apache2 = Apache License, version 2.0 (free)
version	3.2
description	(no language specified) The Droid typeface family was designed in the fall of 2006 by Steve Matteson, as a commission from Google to create a set of system fonts for its Android platform. The goal was to provide optimal quality and comfort on a mobile handset when rendered in application menus, web browsers and for other screen text. The Droid family consists of Droid Serif, Droid Sans and Droid Sans Mono fonts, licensed under the Apache License Version 2.0. The bundle includes the fonts in both TrueType and Adobe Type 1 formats. The package does not support the Droid Pro family of fonts, available for purchase from the Ascender foundry.

1715 dtxdescribe – Describe additional object types in dtx source files

Web page on CTAN <https://ctan.org/pkg/dtxdescribe>

name	dtxdescribe
caption	Describe additional object types in dtx source files
author	Dunn, Brian
copyright	Brian Dunn (2016-2024)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.09 (2024-01-20)
last changes	2024-01-20
year	2024
description	(no language specified) The doc package includes tools for describing macros and environments in LaTeX source .dtx format. The dtxdescribe package adds additional tools for describing booleans, lengths, counters, hooks, sockets, plug, keys, packages, classes, options, files, commands, arguments, and other objects, and also works with the standard document classes as well, for those who do not wish to use the .dtx format. Each item is given a margin tag similar to <code>\DescribeEnv</code>, and is listed in the index by itself and also by category. Each item may be sorted further by an optional class. All index entries except code lines are hyperlinked.

The `dtxexample` environment is provided for typesetting example code and its results. Contents are displayed verbatim along with a caption and cross-referencing. They are then input and executed, and the result is shown.

Environments are also provided for displaying verbatim or formatted source code, user-interface displays, and sidebars with titles.

Macros are provided for formatting the names of inline LaTeX objects such as packages and booleans, as well as program and file names, file types, internet objects, the names of certain programs, a number of logos, and inline dashes and slashes.

1720 *duckuments* – Create duckified dummy content

Web page on CTAN <https://ctan.org/pkg/duckuments>

name	<code>duckuments</code>
caption	Create duckified dummy content
author	Spratte, Jonathan P.
copyright	Jonathan P. Spratte (2018-2019)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.5 (2019-10-03)
last changes	2019-10-03
year	2019
description	(no language specified) The package provides facilities to create duckified dummy contents. It was inspired by the question ” Getting ducks in example images ” on TeX-LaTeX Stack Exchange.

The following macros are available:

- `\duckument[key=val]` - print a short duckument
- `\blindduck[key=val]` - print a paragraph
- `\ducklist(*){environment}` - create a list of type environment
- `\ducklistlist(*){environment}` - create nested lists
- `\duckitemize - ducklist{itemize}`
- `\duckenumerate - ducklist{enumerate}`
- `\duckdescription - ducklist{description}`
- `\duckumentsCreateExampleFile`
- `\duckumentsDrawRandomDucks`

The package works with pdfTeX, LuaTeX, and XeTeX.

1726 *dvdcoll* – A class for typesetting DVD archives

Web page on CTAN <https://ctan.org/pkg/dvdcoll>

name	dvdcoll
caption	A class for typesetting DVD archives
author	Kleber, Josef
license	lppl = The LaTeX Project Public License (free)
version	1.1a

description	(no language specified) Having lost the overview of my DVD archives, I simply could not remember if I already recorded the documentary running on TV that day. I chose to recreate the index using LaTeX: the design aim was a hyperlinked and fully searchable PDF-document, listing my DVDs with all titles, lengths and so on. Further requirements were support for seasons of tv series and a list with all faulty or missing programs for rerecording. The <i>dvdcoll</i> class supports all these requirements. <i>dvdcoll.cls</i> follows the structure <code><number><title><length></code>. As a result, the class is not limited to DVDs—you can of course typeset archives of CD-ROMs, Audio-CDs and so on. Supported languages at the moment: English, French, German, Italian, Polish, Portuguese, Spanish. Some help is needed for other languages!

1731 *dvi2bitmap* – Utility to convert TeX DVI files directly to bitmaps

Web page on CTAN <https://ctan.org/pkg/dvi2bitmap>

name	dvi2bitmap
caption	Utility to convert TeX DVI files directly to bitmaps
author	Gray, Norman
license	gpl2 = GNU General Public License, version 2 (free)
version	1.0 (2015-01-12)
last changes	2015-01-12
year	2015
description	(no language specified) A utility to convert TeX DVI files directly to bitmaps, without going through the complicated (and slow!) route of conversion via PostScript and PNM. The prime motivation for this is to prepare mathematical equations for inclusion in HTML files but there are many other uses beyond that. It can generate XBM and GIF bitmaps, plus PNG, if you have the libpng library installed. It uses the same kpathsea font-searching library as other TeX programs, again as long as you have the appropriate library installed. The program is written in C++, and incidentally provides a good object interface for DVI and PK files.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/dviware/dvi2bitmap/README
documentation	(English) <i>Dvi2bitmap library details</i> :: https://ctan.org/tex-archive/dviware/dvi2bitmap/doc_libdvi2bitmap/html/index.html

description (no language specified) *Dvipdfmx* (formerly *dvipdfm-cjk*) is a development of *dvipdfm* created to support multi-byte character encodings and large character sets for East Asian languages. *Dvipdfmx*, if "called" with the name *dvipdfm*, operates in a "*dvipdfm* compatibility" mode, so that users of the both packages need only keep one executable.

A secondary design goal is to support as many "PDF" features as does *pdfTeX*.

The current version of the package is no longer maintained on CTAN as a separate entity; development now takes place within the TeX Live framework, and it is no longer available as a separate package. For download, support, and other information, please see *TeX Live*. However, the information on this page is maintained and should be current.

Web page on CTAN <https://ctan.org/pkg/dvipng>

name *dvipng*

caption A fast DVI to PNG/GIF converter

author Larsson, Jan-Åke

copyright Jan-Åke Larsson (2002-2020)

license lgpl3 = GNU Lesser General Public License 3 (free)

version 1.18 (2025-02-02)

last changes 2025-02-02

year 2025

description (no language specified) This program makes PNG and/or GIF graphics from DVI files as obtained from TeX and its relatives. Its benefits include:

- Speed. It offers very fast rendering of DVI as bitmap files, which makes it suitable for generating large amounts of images on-the-fly, as needed in [preview-latex](#), WeBWorK and others;
- It does not read the postamble, so it can be started before TeX finishes. There is a `-follow` switch that makes *dvipng* wait at end-of-file for further output, unless it finds the POST marker that indicates the end of the DVI;
- Interactive query of options. *dvipng* can read options interactively through stdin, and all options are usable. It is even possible to change the input file through this interface.
- Support for PK, VF, PostScript Type1, and TrueType fonts, colour specials, and inclusion of PostScript, PNG, JPEG or GIF images.

1757 dvipsconfig – Collection of dvips PostScript headers

Web page on CTAN <https://ctan.org/pkg/dvipsconfig>

name	dvipsconfig
caption	Collection of dvips PostScript headers
author	Kuhlmann, Volker
license	gpl = GNU General Public License (free)
version	1.6
description	(no language specified) This is a collection of dvips PostScript header and dvips config files. They control certain features of the printer, including: A4, A3, usletter, simplex, duplex / long edge, duplex / short edge, screen frequencies of images, black/white invers, select transparency / paper for tektronix 550/560, manual feeder, envelope feeder, and tray 1, 2 and 3, and printing a PostScript grid underneath the page material—very useful for measuring and eliminating paper feed errors!
documentation	(no language specified) <i>Readme:</i> https://ctan.org/tex-archive/dviware/dvipsconfig/README
on CTAN	https://ctan.org/tex-archive/dviware/dvipsconfig
on T _E XLive	dvipsconfig
keyword	dvi-print (convert DVI files for (direct) printing, etc.)
language(s)	no language specified

1760 *dvistd* – A standard for DVI drivers

Web page on CTAN <https://ctan.org/pkg/dvistd>

name	dvistd
caption	A standard for DVI drivers
author	TUG DVI Standards Working Group
license	noinfo = noinfo
version	0.05
description	(no language specified) There’s nothing written by Knuth that provides a “standard” for what DVI drivers actually do; users are commonly referred to the sources of dvitype, but that doesn’t actually specify anything (merely tells you how the utility works). The DVI standards working group set out to produce a comprehensive specification of what device drivers should do. The present “level 0” is as far as the effort got.
documentation	(no language specified) <i>The document itself</i> : https://ctan.org/tex-archive/dviware/driv-standard/level-0/dvistd0.pdf
– local file	./5790563001-dvistd0.pdf

1762 *dvisvgm* – Convert DVI, EPS, and PDF files to Scalable Vector Graphics format (SVG)

Web page on CTAN <https://ctan.org/pkg/dvisvgm>

name	dvisvgm
caption	Convert DVI, EPS, and PDF files to Scalable Vector Graphics format (SVG)
author	Giesecking, Martin
copyright	Martin Giesecking (2005-2025)
license	gpl3+ = GNU General Public License, version 3 or newer (free)
version	3.6

description	(no language specified) Dvisvgm is a command line utility that converts TeX DVI as well as EPS and PDF files to the XML-based Scalable Vector Graphics (SVG) format. It provides full font support including virtual fonts, font maps, and sub-fonts. If necessary, dvisvgm vectorizes Metafont's bitmap output in order to always create lossless scalable output. The embedded SVG fonts can optionally be replaced with graphics paths so that applications that do not support SVG fonts are enabled to render the graphics properly. Besides many other features, dvisvgm also supports color, emTeX, tpic, papersize, PDF mapfile and PostScript specials. Users will need a working TeX installation including the kpathsea library. For more detailed information, see the project page .
documentation	(no language specified) <i>Manual page</i> : https://dvisvgm.de/Manpage

1769 dviwin – MS-Windows DVI screen and printer driver

Web page on CTAN <https://ctan.org/pkg/dviwin>

name	dviwin
caption	MS-Windows DVI screen and printer driver
author	Sendoukas, Hippocrates
license	pd = Public Domain Software (free)
version	2.9

description	(no language specified) A screen and printer driver for TeX DVI files under 32-bit Windows. Its main features are: Fast previewing (uses 386-specific code if it finds a 386/486); Painless support for graphics in TeX documents; Uses any standard PK font files or FLI font libraries; Works with all displays and printers supported by Windows; Automatic generation of missing fonts; Support for color printers; Native 32-bit versions for Windows NT; Selectable measurement units; User-definable strings for easy adaptation to various languages (the distribution contains strings for four different languages apart from English); graphics filters for GIF and XPM files, etc. The required memory depends on the resolution that you use. It needs about 1.5M free RAM to print on a 300dpi printer without swapping.
documentation	(no language specified) <i>Readme:</i> https://ctan.org/tex-archive/dviware/dviwin/README
on CTAN	https://ctan.org/tex-archive/dviware/dviwin
keyword	dvi-prev (preview DVI files)

1770 *dynamicnumber* – Dynamically typeset numbers and values in LaTeX through “symbolic links”

Web page on CTAN <https://ctan.org/pkg/dynamicnumber>

name	<i>dynamicnumber</i>
caption	Dynamically typeset numbers and values in LaTeX through “symbolic links”
author	Pieters, Olivier
copyright	Olivier Pieters (2015)
license	mit = MIT License (free)
version	0.1.3
description	(no language specified) This package dynamically typesets values generated by different kinds of scripts in LaTeX through the use of “symbolic links” (which are not in any way related to the “symbolic links” used in UNIX systems!). The aim is to reduce errors resulting from out-of-date numbers by directly setting them in the number generating file and importing a “symbolic link” into the LaTeX source file. It can be used to import not only numerical values, but strings and pieces of code are also possible.

1771 *dynblocks* – A simple way to create dynamic blocks for Beamer

Currently only MATLAB and Python are supported to produce Dynamic Number list files.

documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/dynamicnumber/dynamicnumber.pdf

1784 *easydtx* – A simplified DTX format

Web page on CTAN	https://ctan.org/pkg/easydtx
name	EasyDTX
caption	A simplified DTX format
author	Živanović, Sašo
copyright	Sašo Živanović (2023-2024)

1785 *easyeqn* – A simple package for writing equations

license	gpl3+ = GNU General Public License, version 3 or newer (free)
version	0.2.0 (2024-11-23)
last changes	2024-11-23
year	2024
description	(no language specified) EasyDTX is a variant of the DTX format which eliminates the need for all those pesky "macrocode" environments. Any line introduced by a single comment counts as documentation, and documentation lines may be indented. An <code>.edtx</code> file is converted to a <code>.dtx</code> by a little Perl script called <code>edtx2dtx</code>. There is also a rudimentary Emacs mode, implemented in <code>easydoctex-mode.el</code>, which takes care of fontification, indentation, and forward and inverse search.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/support/easydtx/README.md
contact	<i>repository</i> : https://github.com/sasozivanovic/easydtx

on TeXLive	<code>easy</code>
keyword	<code>maths</code> (support for typesetting mathematics)
language(s)	no language specified
year	without year
last access	2025-02-07

1786 **easyfig** – Simplifying the use of common figures

Web page on CTAN	https://ctan.org/pkg/easyfig
name	<code>easyfig</code>
caption	Simplifying the use of common figures
author	Scharrer, Martin
copyright	Martin Scharrer (2011-2018)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.2a (2018-03-30)
last changes	2018-03-30
year	2018

description	(no language specified) The package provides the command <code>\Figure[<key=value>...]{<image filename>}</code> to simplify the business of including an image as figure in the most common form (centred and with caption and label). Caption and label are set using the <code>caption</code> and <code>label</code> keys; the label <code>fig:<image filename></code> is used if none is given. If the <code>here</code> key is given, the figure is not ‘floated’, and the user is responsible for placement. The package uses the author’s package <code>adjustbox</code> to centre an image and to simplify further modifications. As <code>adjustbox</code> now provides keys to turn images or other material into floats or non-floats, including captions, <code>easyfig</code> has become quite redundant.

1804 *ec* – Computer modern fonts in T1 and TS1 encodings

Web page on CTAN <https://ctan.org/pkg/ec>

name	<i>ec</i>
caption	Computer modern fonts in T1 and TS1 encodings
author	Schwarz, Norbert
author	Knappen, Jörg
license	other-free = Free license not otherwise listed (free)
version	1.0
description	(no language specified) The EC fonts are European Computer Modern Fonts, supporting the complete LaTeX T1 encoding defined at the 1990 TUG conference hold at Cork/Ireland. These fonts are intended to be stable with no changes being made to the tfm files. The set also contains a Text Companion Symbol font, called <i>tc</i>, featuring many useful characters needed in text typesetting, for example oldstyle digits, currency symbols (including the newly created Euro symbol), the permille sign, copyright, trade mark and servicemark as well as a copyleft sign, and many others. Recent releases of LaTeX2e support the EC fonts. The EC fonts supersede the preliminary version released as the DC fonts. The fonts are available in (traced) Adobe Type 1 format, as part of the cm-super bundle. The other Computer Modern-style T1-encoded Type 1 set, Latin Modern, is not actually a direct development of the EC set, and differs from the EC in a number of particulars.

1829 edmargin – Multiple series of endnotes for critical editions

Web page on CTAN <https://ctan.org/pkg/edmargin>

name	edmargin
caption	Multiple series of endnotes for critical editions
author	Burt, John
copyright	John Burt (2008)
license	lppl = The LaTeX Project Public License (free)
version	1.2
description	(no language specified) Edmargin provides a very simple scheme for endnote sections for critical editions. Endnotes can either be marked in the text, or with marginal references to the page in the note sections where the note is to be found. Notes can be set in individual paragraphs, or in block paragraph mode (where there are many short notes). Note sections will have running headers of the form "Textual notes to pp. xx–yy". New note sections can be created on the fly. There are predefined endnote sections for textual notes, emendations, and explanatory notes.

1830 `edmaths` – A report and thesis class file for the University of Edinburgh (UoE)

Web page on CTAN <https://ctan.org/pkg/edmaths>

name `edmaths`

caption A report and thesis class file for the University of Edinburgh (UoE)

author Fogg, Josh

copyright Josh Fogg (2024)

license lpl1.3c = The LaTeX Project Public License 1.3c (free)

version 0.99

description (no language specified) A report and thesis class file for [The School of Mathematics, Scotland](#) at the [University of Edinburgh \(UoE\)](#) . When working on a report or thesis, an easy way to implement the [University's typesetting rules](#) in LaTeX is provided by [edmaths.sty](#) . It sets the page margins as required and defines commands to create the correct cover page and standard declaration. A compiled version of the included example can be [found here](#) .

It also loads the [amsmath](#) , [amsthm](#) , [amscd](#) , and [amssymb](#) packages, which are required by almost all mathematical publications. Through [setspace](#) line spacing settings are available that only affect the body text and not footnotes and captions. Additional in-built options can be found in more detail in the project's documentation.

version (2024-03-01)

last changes 2024-03-01

year 2024

description (no language specified) This package provides a LaTeX class for typesetting articles with a simple and clear design.

Currently, it has native support for Chinese (simplified and traditional), English, French, German, Italian, Japanese, Portuguese (European and Brazilian), Russian and Spanish typesetting. It compiles with either XeLaTeX or LuaLaTeX.

This is part of the *minimalist* class series and depends on `minimalist.sty` from the *minimalist* package.

The package name "einfart" is taken from the German word "einfach" ("simple"), combined with the first three letters of "Artikel" ("article").

1850 *eitl* – Easy install of TeX Live

Web page on CTAN <https://ctan.org/pkg/eitl>

name	<code>eitl</code>
caption	Easy install of TeX Live
author	Voß, Herbert
author	Niepraschk, Rolf
copyright	Rolf Niepraschk, Herbert Voß (2012)
license	lppl = The LaTeX Project Public License (free)
version	0.04
description	(no language specified) The script allows the easy install of a current TeX Live version over the net. It is tested with the current Linux versions of OpenSUSE and Ubuntu. The script: • looks for a fast server • downloads the install script • deletes an existing TeX Live version from Ubuntu (deb) or openSUSE (rpm) • extracts and runs the install script • installs a complete up-to-date TeX Live from <code>tug.org</code> • installs the non free fonts from <code>tug.org</code> which are not part of TeX Live, like arial, Luxi mono, etc. • installs the GUIs TeXmaker and TeXworks • creates files <code>zzz-texlive.sh/csh</code> for <code>/etc/profile.d/</code> If no directory is specified, TeX Live will be installed in the home directory <code>~/texlive</code>. For another directory, run the script with the directory name; e.g.: <pre>./eitl.sh /usr/local/texlive</pre> for some actions the script needs to be root. In such cases it asks for the root password.
documentation	(no language specified) <i>Readme</i>: https://ctan.org/tex-archive/support/texlive/eitl/README

last changes	2021-11-21
year	2021
description	(no language specified) <i>ekdosis</i> is a LuaLaTeX package designed for multilingual critical editions. It can be used to typeset texts and different layers of critical notes in any direction accepted by LuaTeX. Texts can be arranged in running paragraphs or on facing pages, in any number of columns which in turn can be synchronized or not. In addition to printed texts, <i>ekdosis</i> can convert <code>.tex</code> source files so as to produce TEI xml-compliant critical editions. Database-driven encoding under LaTeX then allows extraction of texts entered segment by segment according to various criteria: main edited text, variant readings, translations or annotated borrowings between texts.

caption	Typeset scholarly editions
author	Rouquette, Maïeul
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.24.12 (2017-09-24)
last changes	2017-09-24
year	2017
description	(no language specified) A package for typesetting scholarly critical editions, replacing the established <code>ledmac</code> package. Ledmac itself was a LaTeX port of the plain TeX <code>EDMAC</code> macros. The package supports indexing by page and by line numbers, and simple tabular- and array-style environments. The package is distributed with the related <code>eledpar</code> package. The package is now superseded by <code>reledmac</code>.

1872 `elteiktdk` – TDK-thesis template for Hungarian TDK conferences, Section of Computer Science

Web page on CTAN <https://ctan.org/pkg/elteiktdk>

name `elteiktdk`

caption TDK-thesis template for Hungarian TDK conferences, Section of Computer Science

author Cserép, Máté

copyright Máté Cserép (2013-2024)

license mit = MIT License (free)

version 2.1

description (no language specified) The National Conference of Scientific Students Associations (OTDK) of Hungary is the most significant scientific event for Bachelor and Master students in the country, where students compete with their research papers in all field of science. It is organized in every 2 years. The conference/competition has 2 rounds: a university level and a country level (for the best papers).

This class template enforces the required formatting rules for TDK theses and generates the cover and title page given on the provided metadata. The formatting rules are defined to meet the requirements for TDK theses submitted at the Eötvös Loránd University, Faculty of Informatics (Budapest, Hungary). This also fits the formatting requirements of the Computer Science Section of the country level round. With sufficient modifications the template could be usable for TDK theses at other national and faculty level sections, too.

The template supports producing both Hungarian and English theses.

1877 *emarks* – Named mark registers with e-TeX

Web page on CTAN <https://ctan.org/pkg/emarks>

name	emarks
caption	Named mark registers with e-TeX
author	Chervet, Florent
copyright	Florent Chervet (2011)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0
description	(no language specified) E-TeX provides 32 768 mark registers; using this facility is far more comfortable than LaTeX tricks with <code>\markright</code>, <code>\markboth</code>, <code>\leftmark</code> and <code>\rightmark</code>. The package provides two commands for marking: <code>\marksthe</code> and <code>\marksthecs</code>, which have * forms which disable expansion; new mark registers are allocated as needed. Syntax is closely modelled on the <code>\marks</code> primitive. Four commands are provided for retrieving the marks registers' content: <code>\thefirstmarks</code>, <code>\thebotmarks</code>, <code>thetopmarks</code> and <code>\getthemarks</code>; and the command <code>\ifmarksequal</code> is available for comparing the content of marks registers. The package requires an e-TeX-enabled engine, and the etex package.

1884 *emo* – Emoji for all (LaTeX engines)

Web page on CTAN <https://ctan.org/pkg/emo>

name	emo
caption	Emoji for all (LaTeX engines)
author	Grimm, Robert
copyright	Robert Grimm (2023)
license	ofl = The SIL Open Font License (free)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
license	other-free = Free license not otherwise listed (free)
license	apache2 = Apache License, version 2.0 (free)
version	0.4 (2023-04-26)

last changes	2023-04-26
year	2023
description	(no language specified) Emo implements the <code>\emo{ 'emoji-name' }</code> command for including color emoji such as <code>\emo{desert-island}</code> or <code>\emo{parrot}</code> in your documents independent of input encoding or LaTeX engine. The implementation uses the Noto color emoji font if the engine supports it and includes PDF graphics otherwise. The latter are automatically derived from Noto's SVG sources, so the visual appearance is very similar. Emo may come in particularly handy when dealing with academic publishers that provide only minimal support for non-Latin scripts.

1888 `emp` – “Encapsulate” MetaPost figures in a document

Web page on CTAN <https://ctan.org/pkg/emp>

name	<code>emp</code>
caption	“Encapsulate” MetaPost figures in a document
author	Ohl, Thorsten
copyright	Thorsten Ohl (1997)
license	gpl = GNU General Public License (free)

description	(no language specified) Emp is a package for encapsulating MetaPost figures in LaTeX: the package provides environments where you can place MetaPost commands, and means of using that code as fragments for building up figures to include in your document. So, with emp, the procedure is to run your document with LaTeX, run MetaPost, and then complete running your document in the normal way. Emp is therefore useful for keeping illustrations in synchrony with the text. It also frees you from inventing descriptive names for PostScript files that fit into the confines of file system conventions.
documentation	(no language specified) <i>Package Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/emp/README

version	2.16 (2020-03-24)
last changes	2020-03-24
year	2020
description	(no language specified) This package is part of the mathtools bundle. it provides a visual markup extension to amsmath . The user-friendly interface allows the user to put a set of equations inside a box thus enhancing the <code>\boxed</code> feature of amsmath. As a side effect it is also possible to add material on both sides of the equations thus providing (and surpassing) the functionality of the cases package. Users of ntheorem will probably want to have a look at it as well, since the problem with end-of-theorem marks in <code>gather</code> and other environments can be circumvented using <code>empheq</code> .

1896 *enctex* – A TeX extension that translates input on its way into TeX

Web page on CTAN <https://ctan.org/pkg/enctex>

name *encTeX*
caption A TeX extension that translates input on its way into TeX
author Olšák, Petr
copyright Petr Olšák (1997, 2002-2004)
license gpl = GNU General Public License (free)
version (2014-05-08)
last changes 2014-05-08
year 2014
description (no language specified) EncTeX is (another) TeX extension, written at the change-file level. It provides means of translating input on the way into TeX. It allows, for example, translation of multibyte sequences, such as utf-8 encoding.
documentation *Reference manual (in Czech):*

1897 *encxvlna* – Insert nonbreakable spaces, using *encTeX*

Web page on CTAN <https://ctan.org/pkg/encxvlna>

name	encxvlna
caption	Insert nonbreakable spaces, using <i>encTeX</i>
author	Wagner, Zdeněk
author	Olšák, Petr
copyright	Zdeněk Wagner (2007)
license	lppl = The LaTeX Project Public License (free)
version	1.1 (2014-05-17)
last changes	2014-05-17
year	2014
description	(no language specified) The package provides tools for inserting nonbreakable spaces after nonsyllabic prepositions and single letter conjunctions as required by Czech and Slovak typographical rules. It is implemented using <i>encTeX</i> and provides files both for plain TeX and LaTeX. The LaTeX solution tries to avoid conflicts with other packages.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/generic/encxvlna/doc/encxvlna.pdf
– local file	./4439679185-encxvlna.pdf

1898 *endfloat* – Move floats to the end, leaving markers where they belong

Web page on CTAN <https://ctan.org/pkg/endfloat>

name	endfloat
caption	Move floats to the end, leaving markers where they belong
author	Goldberg, Jeffrey
author	Sommerfeldt, Axel
copyright	Darrel McCauley (1992)
copyright	Jeffrey Goldberg (1994-2011)
copyright	Axel Sommerfeldt (2011-2019)
license	gpl = GNU General Public License (free)
version	2.7
description	(no language specified) Place all floats on pages by themselves at the end of the document, optionally leaving markers like "[Figure 3 about here]" in the text near to where the figure (or table) would normally have occurred. Float types <code>figure</code> and <code>table</code> are recognised by the package, unmodified. Since several packages define other types of float, it is possible to register these float types with <code>endfloat</code> .

1901 *endnote* – Generic “endnotes” code

Web page on CTAN <https://ctan.org/pkg/endnote>

name	<code>endnote</code>
caption	Generic “endnotes” code
license	<code>noinfo = noinfo</code>
version	(1993-02-15)
last changes	1993-02-15
year	1993
description	(no language specified) A very simple set of macros for producing endnotes (“instead of footnotes”). The endnotes are saved in a box, which is re-emitted by a command <code>\producenotes</code> ; this technique does not scale well. For all its limitations, the package has the distinction of working with most TeX formats (unlike the LaTeX-only endnotes , for example).
on CTAN	https://ctan.org/tex-archive/macros/generic/misc/endnote.tex
on MikTeX	<code>genmisc</code>
keyword	<code>endnote</code> (notes typeset at end document)
see also	see section 4466 on page 4042 : (<code>pagenote</code> – Notes at end of document)
language(s)	no language specified
last access	2025-02-07

1902 *endnote2bib* – Convert EndNote files to BibTeX

Web page on CTAN <https://ctan.org/pkg/endnote2bib>

name	<code>EndNote2bib</code>
caption	Convert EndNote files to BibTeX
author	Mathar, Richard J
license	lppl = The LaTeX Project Public License (free)
version	(2007-06-21)
last changes	2007-06-21
year	2007

description	(no language specified) EndNote2bib reads its files and produces a BibTeX reference list on the standard output. Since EndNote files are inherently unstructured, EndNote2bib only does a passable job (for example, it may need to invent a key for an entry, and it may have difficulty with the BibTeX entry type).
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/biblio/bibtex/utils/r2bib/README
on CTAN	https://ctan.org/tex-archive/biblio/bibtex/utils/r2bib

1919 enumitem – Control layout of itemize, enumerate, description

Web page on CTAN <https://ctan.org/pkg/enumitem>

name	enumitem
caption	Control layout of itemize, enumerate, description
author	Bezos López, Javier
copyright	Javier Bezos (2003-2025)
license	mit = MIT License (free)
version	3.11 (2025-02-06)
last changes	2025-02-06
year	2025
description	(no language specified) This package provides user control over the layout of the three basic list environments: <i>enumerate</i> , <i>itemize</i> and <i>description</i> . It supersedes both enumerate and mdwlist (providing well-structured replacements for all their functionality), and in addition provides functions to compute the layout of labels, and to ‘clone’ the standard environments, to create new environments with counters of their own.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/enumitem/enumitem.pdf

1920 enumitem-zref – Extended references to items for enumitem package

Web page on CTAN <https://ctan.org/pkg/enumitem-zref>

name	enumitem-zref
caption	Extended references to items for enumitem package
author	Chervet, Florent
copyright	Florent Chervet (2010)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.8
description	(no language specified) The package is a companion for the enumitem package; it makes it possible to reference any item in lists formatted by enumitem lists, viz., enumerated, itemize and description lists, and any list defined (or customised) with <code>\newlist</code> or <code>\setlist</code>. References may be typeset differently with options/properties and even arbitrary text. With hyperref, anchors are added for each item to enable hyperlinks within the document or even to external documents. Three schemes are provided to make reference names (including the standard <code>\label</code> command). The package is currently broken, cf. https://tex.stackexchange.com/q/664886/1090

1931 `eoldef` – Define commands which absorb the whole source line as arguments

Web page on CTAN <https://ctan.org/pkg/eoldef>

name	<code>eoldef</code>
caption	Define commands which absorb the whole source line as arguments
author	plante
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1
description	(no language specified) This macro allows you to define commands that take the entire source line as arguments.

Version 1.0

Copyright (C) 2025 plante

This file is relased under the LaTeX Project Public License (LPPL) 1.3c.

Usage:

`\eoldef <control sequence> <parameter text> { <replacement text> }`
defines a control sequence that is delimited by the end-of-line in addition to the specified parameter text.

For instance, `\eoldef\test#1:#2{}` and

`\test abc:def`

will give `#1 = abc , #2 = def .`

`\eoldef` is the `\global` variant to `\eoldef` .

Like `\verb...ll` , `\eoldef` 'd commands may generally not be used as part of another command's argument as it changes catcodes.

However, if you must use it in environments where catcodes are frozen, you may follow the command with a braced argument, eg. `\test{#1:#2}` using the previous example.

This package may be used in plain TeX or LaTeX by `\input{eoldef}` .

1940 `epix` – Utility for mathematically accurate, camera quality plots and line figures

Web page on CTAN <https://ctan.org/pkg/epix>

```
name          ePiX
```

caption Utility for mathematically accurate, camera quality plots and line figures

author Hwang, Andrew D.

license gpl = GNU General Public License (free)

description	(no language specified) ePiX is a collection of batch-oriented utilities for Unix-like systems. It creates mathematically accurate line figures, plots, and movies using easy-to-learn syntax. LaTeX and dvips comprise the typographical rendering engine, while ImageMagick is used to create bitmapped images and animations. The user interface resembles that of LaTeX itself: you prepare a short scene description in a text editor, then "compile" the input file into a picture. Default output formats are eepic (a plain text enhancement to the LaTeX picture environment), eps, pdf, png, and mng.
keyword	graphics-engn (graphics generator whose output is good for use with TeX)

1960 *epstopdf-pkg* – Call *epstopdf* ”on the fly”

version	2.36 (2024-07-11)
last changes	2024-07-11
year	2024
description	(no language specified) <i>Epstopdf</i> is a Perl script that converts an EPS file to an ‘encapsulated’ PDF file (a single page file whose media box is the same as the original EPS’s bounding box). The resulting file suitable for inclusion by pdfTeX as an image. The script is adapted to run both on Windows and on Unix-alike systems. The script makes use of Ghostscript for the actual conversion to PDF. It assumes Ghostscript version 6.51 or later, and (by default) suppresses its automatic rotation of pages where most of the text is not horizontal. LaTeX users may make use of the epstopdf package, which will run the <i>epstopdf</i> script ”on the fly”, thus giving the illusion that pdfLaTeX is accepting EPS graphic files.

1961 eq-fetchbbl – Match Biblical passages with verse references in a quiz

Web page on CTAN <https://ctan.org/pkg/eq-fetchbbl>

name	eq-fetchbbl
caption	Match Biblical passages with verse references in a quiz
author	Story, Donald P.
copyright	D. P. Story (2021)
license	lpl = The LaTeX Project Public License (free)
version	1.0 (2021-03-15)
last changes	2021-03-15
year	2021
description	(no language specified) This package is an application to the exerquiz (eq) and fetchbibpes (fetchbbl) packages. It defines several commands and two environments that are used to conveniently build quizzes that challenge the user to match Bible passages with their corresponding verse references. Technically speaking, such quizzes may be built without this package. However, when working with Biblical topics, it is easier to incorporate the fetching capabilities of fetchbibpes.

1962 eq-pin2corr – Add PIN security to the “Correct” button of a quiz created by exerquiz

Web page on CTAN <https://ctan.org/pkg/eq-pin2corr>

name	eq-pin2corr
caption	Add PIN security to the “Correct” button of a quiz created by exerquiz
author	Story, Donald P.
copyright	D. P. Story (2021)
license	lppl1.2 = The LaTeX Project Public License 1.2 (free)
version	(2021-05-29)
last changes	2021-05-29
year	2021
description	(no language specified) This package is an add-on to the <code>quiz</code> environment of the exerquiz package (part of the acrotex bundle). It adds PIN security to a quiz created by the <code>quiz</code> environment. To correct a quiz, the document consumer must press the “Correct” button of the quiz and successfully enter the correct PIN number. The PIN security is designed for the instructor to mark and record the student’s effort on that quiz. The package works for the usual workflows.

version	1.0.1 (2026-03-23)
last changes	2026-03-23
year	2026

description	(no language specified) This LaTeX2e package provides a framework for typesetting single- and multiline equations which extends the established equation environments of LaTeX and the <code>amsmath</code> package with many options for convenient adjustment of the intended layout. In particular, the package adds flexible schemes for numbering, horizontal alignment and semi-automatic punctuation, and it improves upon the horizontal and vertical spacing options. The extensions can be used and adjusted through optional arguments and modifiers to the equation environments as well as global settings.

1976 `eqnnumwarn` – Modifies the amsmath equation environments to warn for a displaced equation number

Web page on CTAN <https://ctan.org/pkg/eqnnumwarn>

name	<code>eqnnumwarn</code>
caption	Modifies the amsmath equation environments to warn for a displaced equation number
author	Gleason, Jonathan
copyright	Jonathan Gleason (2017)

1977 eqparbox – Create equal-widthed parboxes

license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0
description	(no language specified) Sometimes an equation is too long that an equation number will be typeset below the equation itself, but yet not long enough to yield an "overfull \hbox" warning. The eqnnumwarn package modifies the standard amsmath numbered equation environments to throw a warning whenever this occurs.

1977 eqparbox – Create equal-widthed parboxes

Web page on CTAN <https://ctan.org/pkg/eqparbox>

name	eqparbox
caption	Create equal-widthed parboxes
author	Pakin, Scott
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	4.1

description	(no language specified) LaTeX users sometimes need to ensure that two or more blocks of text occupy the same amount of horizontal space on the page. To that end, the eqparbox package defines a new command, <code>\eqparbox</code> , which works just like <code>\parbox</code> , except that instead of specifying a width, one specifies a tag. All eqparboxes with the same tag—regardless of where they are in the document—will stretch to fit the widest eqparbox with that tag. This simple, equal-width mechanism can be used for a variety of alignment purposes, as is evidenced by the examples in eqparbox’s documentation. Various derivatives of <code>\eqparbox</code> are also provided.

1998 **esrelation** – Provides a symbol set for describing relations between ordered pairs

Web page on CTAN <https://ctan.org/pkg/esrelation>

name	esrelation
caption	Provides a symbol set for describing relations between ordered pairs
author	Reinfurt, David
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	(2015-05-06)
last changes	2015-05-06
year	2015

description	(no language specified) Around 2008, researcher Byron Cook and several colleagues began developing a new set of interrelated algorithms capable of automatically reasoning about the behavior of computer programs and other systems (such as biological systems, circuit designs, etc). At the center of these algorithms were new ideas about the relationships between structures expressable as mathematical sets and relations. Using the language of mathematics and logic, the researchers communicated these new results to others in their community via published papers, research talks, etc. Unfortunately, they found the symbols already available for reasoning about relations lacking (in contrast to sets, which have a long-ago developed and robust symbol vocabulary). Early presentations were unnecessarily cluttered. To more elegantly express these ideas around relations, Cook recruited artist Tauba Auerbach to help develop a set of symbols. This package provides an math symbol font for describing relations between ordered pairs by using Metafont.

2007 *etex* – An extended version of TeX, from the NTS project

Web page on CTAN <https://ctan.org/pkg/etex>

Alias	e-tex
name	e-TeX
caption	An extended version of TeX, from the NTS project
author	The TeX Live Team
author	Breitenlohner, Peter
license	knuth = Knuth License (free)
description	(no language specified) An extended version of TeX (capable of running as if it were unmodified TeX). E-TeX has been specified by the LaTeX team as the base engine for LaTeX2e. Thus, LaTeX programmers may assume e-TeX functionality, along with additional extensions. The pdf_{te}x engine and others directly incorporate the e-TeX extensions. The <i>etex</i> program in most distributions is an incarnation of pdf_{te}x running in DVI mode. The development source for e-TeX is the TeX Live source repository, although further extensions have taken place in the pdf_{te}x and other engine sources, keeping e-TeX stable.

2014 *et*1 – Expandable token list operations

Web page on CTAN <https://ctan.org/pkg/et1>

name	et	1
caption	Expandable token list operations	
author	Spratte, Jonathan P.	
copyright	Jonathan P. Spratte (2020-2021)	
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)	
version	0.3 (2021-11-07)	
last changes	2021-11-07	

year	2021
description	(no language specified) This package provides expandable token list operations for which expl3's <code>l3tl</code> only has unexpandable variants. These expandable versions are typically slower than the unexpandable code. Unlike the <code>l3tl</code> versions, the functions in this module may contain braces and macro parameter tokens in their arguments, but as a drawback they cannot distinguish some tokens and do not consider the character code of group-begin and group-end tokens. Additionally a general map to token lists is provided, modelled after the expl3 internal <code>__tl_act:NNNn</code> but with additional features. The package has no immediate use for document authors; it only contains expl3 functions intended for programmers.

version	1.2d (2023-10-29)
last changes	2023-10-29
year	2023
description	(no language specified) With <code>etoc</code> loaded, <code>\tableofcontents</code> can be used multiple times, and an added command <code>\localtableofcontents</code> allows to typeset "local" tables of contents, i.e. TOCs having their scope limited to the last sectioning command encountered. Since release 1.2, also <code>\locallistoffigures</code> and <code>\locallistoftables</code> are available. Loading <code>etoc</code> per itself does not modify the "contents lines" inherited from the class default or changed via other packages. But full usage of the package allows spectacular effects such as displaying TOCs as trees or mind maps.

2016 etoolbox – e-TeX tools for LaTeX

Web page on CTAN <https://ctan.org/pkg/etoolbox>

name	etoolbox
caption	e-TeX tools for LaTeX
author	Lehman, Philipp
author	Wright, Joseph
copyright	Philipp Lehman (2007-2011)
copyright	Joseph Wright (2015-2020)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.5k (2020-10-05)
last changes	2020-10-05
year	2020
description	(no language specified) The package is a toolbox of programming facilities geared primarily towards LaTeX class and package authors. It provides LaTeX frontends to some of the new primitives provided by e-TeX as well as some generic tools which are not strictly related to e-TeX but match the profile of this package. Note that the initial versions of this package were released under the name elatex. The package provides functions that seem to offer alternative ways of implementing some LaTeX kernel commands; nevertheless, the package will not modify any part of the LaTeX kernel.

2023 euenc – Unicode font encoding definitions for XeTeX

Web page on CTAN <https://ctan.org/pkg/euenc>

name	EUenc
caption	Unicode font encoding definitions for XeTeX
author	Hosny, Khaled
author	Robertson, Will
author	Roux, Élie
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.1h
description	(no language specified) Font encoding definitions for unicode fonts loaded by LaTeX in XeTeX or LuaTeX. The package provides two encodings: • EU1, designed for use with XeTeX, which the fontspec uses for unicode fonts which require no macro-level processing for accents, and • EU2, which provides the same facilities for use with LuaTeX. Neither encoding places any restriction on the glyphs provided by a font; use of EU2 causes the package auxunicode to be loaded (the package is part of this distribution). The package includes font definition files for use with the Latin Modern OpenType fonts.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/euenc/euenc.pdf

2030 *eulervm* – Euler virtual math fontsWeb page on CTAN <https://ctan.org/pkg/eulervm>

name	eulervm
caption	Euler virtual math fonts
author	Schmidt, Walter A.
author	Harcombe, Keiran
license	lppl = The LaTeX Project Public License (free)
version	4.0
description	(no language specified) The well-known Euler fonts are suitable for typesetting mathematics in conjunction with a variety of text fonts which do not provide mathematical character sets of their own. Euler-VM is a set of <i>virtual</i> mathematics fonts based on Euler and CM. This approach has several advantages over immediately using the <i>real</i> Euler fonts: Most noticeably, less TeX resources are consumed, the quality of various math symbols is improved and a usable <code>\hslash</code> symbol can be provided. The virtual fonts are accompanied by a LaTeX package which makes them easy to use, particularly in conjunction with Type1 PostScript text fonts. They are compatible with amsmath . A package option allows the fonts to be loaded at 95% of their nominal size, thus blending better with certain text fonts, e.g., Minion.

caption	Provide Euro values for national currency amounts
author	Franz, Melchior
copyright	Melchior Franz (1999-2005)
license	lppl = The LaTeX Project Public License (free)
version	1.1
description	(no language specified) Converts arbitrary national currency amounts using the Euro as base unit, and typesets monetary amounts in almost any desired way. Write, e.g., <code>\ATS{17.6}</code> to get something like ‘17,60 öS (1,28 Euro)’ automatically. Conversion rates for the initial Euro-zone countries are already built-in. Further rates can be added easily. The package uses the fp package to do its sums.

2035 *eurofont* – Provides a command that prints a euro symbol

Web page on CTAN <https://ctan.org/pkg/eurofont>

name	eurofont
caption	Provides a command that prints a euro symbol
author	McDonnell, Rowland
copyright	Rowland McDonnell (1998)
license	other-free = Free license not otherwise listed (free)
version	1.1.3
description	(no language specified) The particular symbol printed by <code>\euro</code> will in general change depending on the font family, weight, and shape in use at the time. This symbol can come from any source, and the package user has complete control over which euro symbol is used in any given situation. The package is pre-configured to behave sensibly with many common text fonts and available euro symbols. The <code>\euro</code> command can print ‘faked’ euro symbols from a C with two lines across it when no suitable real euro symbol is available; the package also includes code for printing fake bold euro symbols for use when no real bold symbol exists, as well as pre-configured support for a faked italic version of the marvosym font. Eurofont comes set up to use euro symbols from Adobe’s Eurofonts, the marvosym font, the Eurosym font, and any available Text Companion fonts. The selection between these can be done using options

	passed to the package. The eurofont package also ‘knows’ about the China2e font’s euro symbol, and can be configured to use it.

2040 europs – Access to Adobe’s Euro currency symbol fonts

Web page on CTAN <https://ctan.org/pkg/europs>

name	europs
caption	Access to Adobe’s Euro currency symbol fonts
author	Clausen, Jörn
copyright	Jörn Clausen (1998)
license	noinfo = noinfo
version	1.2
description	(no language specified) Provides access to Adobe’s Euro currency symbol fonts from LaTeX. The fonts are named using Karl Berry’s naming scheme, providing fd files and a style file to use the fonts directly, and providing four macros: <code>\EURtm</code>, <code>\EURhv</code>, <code>\EURcr</code> and <code>\EUR</code> (from marvosym). The actual symbol they produce depends on the currently active font, i.e., they follow font changes caused by <code>\text..</code> and other NFSS commands. The fonts themselves are only available from Adobe (though the fonts are free of charge, the licence conditions prevent CTAN from distributing them). Metrics and maps for using the fonts (at all) are available via the adobe-euro package.

2041 eurosans – Interface to Adobe’s sans-serif Euro font

Web page on CTAN <https://ctan.org/pkg/eurosans>

name	eurosans
caption	Interface to Adobe’s sans-serif Euro font
author	Schmidt, Walter A.
author	Harcombe, Keiran
license	lppl = The LaTeX Project Public License (free)
version	2.1
description	(no language specified) Provides a convenient interface for using Adobe’s freely available Type 1 Euro fonts. Loading the package defines a new command <code>\euro</code> which typesets a Euro symbol. The symbol is always taken from the ‘EuroSans’ family, with the weight (medium or boldface) and shape (normal or oblique) varying according to the font currently selected. This Euro symbol meets the official design and matches most font families well enough, except for typewriter fonts. The fonts themselves are only available from Adobe (though the fonts are free of charge, the licence conditions prevent CTAN from distributing them). Metrics and maps for using the fonts (at all) are available via the adobe-euro package.

author	Peischl, Marei
copyright	Martin Schröder (1994-2001)
copyright	Marei Peischl (2020-2021)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.1
description	(no language specified) The package provided hooks whose arguments are executed just after LaTeX has loaded a new font by means of <code>\selectfont</code>. It has become obsolete with LaTeX versions 2021/01/05 or newer, since LaTeX now provides its own hooks to fulfill this task. For newer versions of LaTeX <code>everysel</code> only provides macros using LaTeX's hook management due to compatibility reasons. See lthooks-doc.pdf for instructions how to use <code>lthooks</code> instead of <code>everysel</code>.

version	4.00 (2020-11-18)
last changes	2020-11-18
year	2020
description	(no language specified) This package provides hooks into <code>\sshipout</code> called <code>\EveryShipout</code> and <code>\AtNextShipout</code> analogous to <code>\AtBeginDocument</code>. With the introduction of the LaTeX hook management this package became obsolete in 2020 and is only provided for backwards compatibility. For current versions of LaTeX it is only mapping the hooks to the original <code>everyshi</code> macros. In case you use an older LaTeX format, <code>everyshi</code> will automatically fall back to its old implementation by loading <code>everyshi-2001-05-15</code>.

2053 *exam* – Package for typesetting exam scripts

Web page on CTAN <https://ctan.org/pkg/exam>

name	<code>exam</code>
caption	Package for typesetting exam scripts
author	Hirschhorn, Philip S.
copyright	Philip S. Hirschhorn (1994,1997,2000,2004,2008,2011,2015,2017,2021,2023)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.704
description	(no language specified) Provides a class <code>exam.cls</code> , which eases production of exams, even by a LaTeX novice. Simple commands are provided to: • create questions, parts of questions, subparts of parts, and subsubparts of subparts, all with optional point values; • create a grading table, indexed either by question number (listing each question and the total possible points for that question) or by page number (listing each page with points and the total possible points for that page); • create headers and footers that are each specified in three parts: one part to be left justified, one part to be centered, and one part to be right justified, in the manner of <code>fancyhdr</code>.

Headers and/or footers can be different on the first page of the exam, can be different on the last page of the exam, and can vary depending on whether the page number is odd or even, or on whether the current page continues a question from a previous page, or on whether the last question on the current page continues onto the following page.

Multiple line headers and/or footers are allowed, and it's easy to increase the part of the page devoted to headers and/or footers to allow for this.

Note that the bundle `exams` also provides a file `exam.cls`; the two bundles therefore clash, and should not be installed on the same system.

last changes	2021-07-31
year	2021
description	(no language specified) This package is an extension to the <code>exam</code> document class. It provides the user with four new multiple choice typesetting environments which place their content in a random order. It can (only) be used in combination with the <code>exam</code> class. It can only randomize the placement of choices in multiple choice questions. The questions themselves cannot be randomized with this package. Furthermore, the package provides a simple answer key table typesetter and has a command for writing the answer keys to an external file.

2057 exam-zh – LaTeX template for Chinese exams

Web page on CTAN	https://ctan.org/pkg/exam-zh
name	exam-zh
caption	LaTeX template for Chinese exams
author	Xia, Kangwei
author	Guo, Lijun
copyright	Zeping Lee, Kangwei Xia, Lijun Guo (2022)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.2.1 (2024-02-15)

last changes	2024-02-15
year	2024
description	(no language specified) Although there are already several excellent exam packages or classes like exam and bhcxam, these do not fit the Chinese style very well, or they cannot be customized easily for Chinese exams of all types, like exams in primary school, junior high school, senior high school and even college. This is the main reason why this package was created. This package provides a class <code>exam-zh.cls</code> and several module packages like <code>exam-zh-question.sty</code> and <code>exam-zh-choices.sty</code>, where these module packages can be used individually. Using <code>exam-zh</code> you can • separate the format and the content very well; • use the <code>choices</code> environment to typeset choice items easily and automatically; • design the seal line easily; • and more (see manual).

2061 **examplep** – Verbatim phrases and listings in LaTeX

Web page on CTAN <https://ctan.org/pkg/examplep>

name examplep
caption Verbatim phrases and listings in LaTeX
author Szabó, Péter
license gpl = GNU General Public License (free)
version 0.04

description	(no language specified) Examplep provides sophisticated features for typesetting verbatim source code listings, including the display of the source code and its compiled LaTeX or MetaPost output side-by-side, with automatic width detection and enabled page breaks (in the source), without the need for specifying the source twice. Special care is taken that section, page and footnote numbers do not interfere with the main document. For typesetting short verbatim phrases, a replacement for the <code>\verb</code> command is also provided in the package, which can be used inside tables and moving arguments such as footnotes and section titles. The listings package is used for syntax highlighting. The accompanying codep package and the wrfiles.pl Perl script provide a convenient interface to the examplep package for authors of manuals. With codep it is possible to generate the source code, the LaTeX or MetaPost output and the compilable example file from a single source embedded into the appropriate place of the .tex document file.

2066 *exceltex* – Get data from Excel files into LaTeX

Web page on CTAN <https://ctan.org/pkg/exceltex>

name *Exceltex*

caption Get data from Excel files into LaTeX

author Doerr, Hans-Peter

license gpl = GNU General Public License (free)

version 0.5.1

description (no language specified) *Exceltex* is a LaTeX package combined with a helper program written in Perl. It provides an easy to use yet powerfull and flexible way to get data from Spreadsheets into LaTeX.

In contrast to other solutions, *exceltex* does not seek to make the creation of tables in LaTeX easier, but to get data from Spreadsheets into LaTeX as easily as possible.

The Excel (TM) file format only acts as an interface between the spreadsheet application and *exceltex* because it is easily accessible (via the `Spreadsheet::ParseExcel` Perl module) and because most spreadsheet applications are able to read and write Excel files.

2068 exercise – Typeset exercises, problems, etc. and their answersWeb page on CTAN <https://ctan.org/pkg/exercise>

name	exercise
caption	Typeset exercises, problems, etc. and their answers
author	Pichaureau, Paul
license	gpl2 = GNU General Public License, version 2 (free)
version	1.6 (2014-10-20)
last changes	2014-10-20
year	2014
description	(no language specified) The package helps to typeset exercises or list of exercises within any document. Exercises, questions and sub-questions are automatically numbered. It is possible to put answers in the same document, and display them immediatly, later in the document or not to print answers at all. The layout of exercises is fully customisable. It is possible to typeset long problems, short exercises, questionnaires, etc. Usage of the babel package is detected, but not fully supported yet (only English and French are implemented).

2070 *exercisepoints* – A LaTeX package to count exercises and points

Web page on CTAN <https://ctan.org/pkg/exercisepoints>

name	exercisepoints
caption	A LaTeX package to count exercises and points
author	Kerstan, Henning
copyright	Henning Kerstan (2017-2019)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.2.3 (2019-01-03)
last changes	2019-01-03
year	2019
description	(no language specified) The package can be used to facilitate exercise counting and exercise point counting in a LaTeX-document. It counts the number of exercises and it sums all the points of the exercises in a document. Especially for exams it is also common to have an overview of all exercises and their maximal points. This is also supported by this package by providing a macro to retrieve the points of each exercise.

author	Fuhlbrück, Frank
copyright	Sebastian Kuhnert, Frank Fuhlbrück (2008-2024)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.17 (2024-04-23)
last changes	2024-04-23
year	2024
description	(no language specified) This LaTeX package provides a way to typeset exercise sheets as used in university courses and school classes. It has evolved from a set of macros and environments that were finally combined into this package. Since version 0.11 it has a regular and a beamer mode (selected depending on the documentclass used). From version 0.16 on there is an embedded mode that allows using exercises in lecture notes etc. without requiring page breaks. Since the package includes a loading mechanism for exercises from external files, the same exercises can be reused in different contexts.

license lpl1.3 = The LaTeX Project Public License 1.3 (free)
version 2.9 (2025-05-04)
last changes 2025-05-04
year 2025
description (no language specified) The *exesheet* package is designed for typesetting exercise or exam sheets. The primary advantage of *exesheet* is its ability to display a detailed scoring guide and correction instructions as needed. This feature is especially beneficial for grading papers with multiple graders.

The *exesheet* package provides:

- macros for organizing exercises and subparts,
- specific settings for enumeration lists,
- environments for questions and answers, which can be displayed or hidden,
- macros for detailed comments and grading instructions in the margins which can be displayed or hidden.

Additionally, the *exesheet* class loads the *school docs* package which manages the page layout, the main title, headers and footers.

year	2024
description	(no language specified) This LaTeX2e package provides a general purpose framework to describe and typeset exercises and exam questions along with their solutions. The package features mechanisms to hide or postpone solutions, to assign and handle points, to collect problems on exercise sheets, to store and use metadata, and to implement a consistent numbering. It also provides a very flexible interface for configuring and customising the formatting, layout, and representation of the exercise content.

2080 **expex-glossonly** – Help **gb4e**, **linguex**, and **covington** users use the **ExPex** glossing macros

Web page on CTAN <https://ctan.org/pkg/expex-glossonly>

name	expex-glossonly
caption	Help <i>gb4e</i> , <i>linguex</i> , and <i>covington</i> users use the <i>ExPex</i> glossing macros
author	Munn, Alan
copyright	Alan Munn (2016-2024)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.9b (2024-02-14)
last changes	2024-02-14
year	2024
description	(no language specified) The ExPex package by John Frampton provides very fine-grained control over glossing and example formatting, including unlimited gloss lines and various ways of formatting multiline glosses. By contrast the <i>cgloss4e</i> glossing macros provided with <i>gb4e</i> , <i>linguex</i> , and <i>covington</i> , although very capable at basic glossing, lack the degree of customization that is sometimes needed for more complex glossing. On the other hand, for those users who have heavily invested in using either <i>gb4e</i> or <i>linguex</i> , or <i>covington</i> , shifting to ExPex can be quite daunting and burdensome, especially since the basic syntax of the examples is quite different. This package is an attempt to have the best of both worlds: it allows <i>gb4e</i> , <i>linguex</i> and <i>covington</i> users to keep using those packages for basic example numbering and formatting, but also allows them to use the glossing macros that ExPex provides.

year	2024
description	(no language specified) This is a collection of different packages that provide key=value functionality in plainTeX, LaTeX, and ConTeXt. At the core, the <code>expkv</code> package implements two expandable key=value parsers that are somewhat fast and robust against common bugs in many key=value implementations (no accidental brace stripping, no fragility for active commas or equals signs). <code>expkv-cs</code> enables users to define expandable key=value macros in a comfortable and straightforward way. <code>expkv-def</code> provides an interface to define common key types for <code>expkv</code> similar to the key defining interfaces of widespread key=value implementations. <code>expkv-opt</code> allows to parse package or class options in LaTeX via <code>expkv</code>. <code>expkv-pop</code> is a utility package to define prefix oriented parsers that allow a somewhat natural formulation (it provides the core functionality for the key-defining front ends of both <code>expkv-cs</code> and <code>expkv-def</code>).

caption	Create exercise sheets and exams
author	Niederberger, Clemens
copyright	Clemens Niederberger (2011-2019)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.21k (2019-09-30)
last changes	2019-09-30
year	2019

description	(no language specified) The package provides the means to create exercises or questions and their corresponding solutions. The questions may be divided into classes and/or topics and may be printed selectively. Meta-data to questions can be added and recovered. The solutions may be printed where they are, or collected and printed at a later point in the document all together, section-wise or selectively by ID. The package provides the means to selectively include questions from an external file, and to control the style of headings of both questions and solutions. As of May 2017, this package has been superseded by its official successor xsim. <code>exsheets</code> itself is now considered obsolete, but will stay alive, and will continue to receive bugfix releases. However, new features will not be added any more.

2093 *exsol* – Exercises and solutions from the same source, into a book

Web page on CTAN <https://ctan.org/pkg/exsol>

name	<code>exsol</code>
caption	Exercises and solutions from the same source, into a book
author	Daems, Walter
copyright	Walter Daems (2012-2025)

license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.7 (2025-02-14)
last changes	2025-02-14
year	2025
description	(no language specified) This package provides macros to allow for embedding exercises and solutions in the LaTeX source of an instructional text (e.g., a book or a course text) while generating the following separate documents: • your original text that only contains the exercises, and • a solution book that contains only the solutions to the exercises (optionally, the exercises themselves can also be copied to the solution book). The exercise data are generated when running LaTeX on your document; the first run also writes the solutions to a secondary file that may be included in a simple document harness, may be processed by LaTeX, to generate a nice solution book. The code of the package was derived (in large part) from fancyvrb .

2098 *extract* – Extract parts of a document and write to another document

Web page on CTAN <https://ctan.org/pkg/extract>

name	<code>extract</code>
caption	Extract parts of a document and write to another document
author	Adriaens, Hendri
copyright	Hendri Adriaens (2004-2019)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.9a
description	(no language specified) The package provides the means to extract specific content from a source document and write that to a target document. One could, for instance, use this to extract all exercises from lecture notes and generate an exercises book on the fly. The package also provides an environment which writes its body entirely to the target file. Another environment will write to the target file, but will also execute the body. This allows to share code (for instance, a preamble) between the source document and the target file. Finally, the package provides an interface to conditionally extract content. With a single package option, one can specify exactly which commands (counted from the start of the document) should be extracted and which not. This might be useful for extracting specific slides from a presentation and use them in a new file.

2100 **extractpdfmark** – Extract page mode and named destinations as PDFmark from PDF

Web page on CTAN <https://ctan.org/pkg/extractpdfmark>

name `extractpdfmark`

caption Extract page mode and named destinations as PDFmark from PDF

author Hosoda, Masamichi

copyright Masamichi Hosoda (2016-2022)

license gpl3+ = GNU General Public License, version 3 or newer (free)

version 1.1.1 (2022-09-30)

last changes 2022-09-30

year 2022

description (no language specified) PDFmarks is a technique that accompanies PDF and that is used to store metadata such as author or title, but also structural information such as bookmarks or hyperlinks.

When Ghostscript reads the main PDF generated by the TeX system with embedded PDF files and outputs the final PDF, the PDF page mode and name targets etc. are not preserved. Therefore, when you open the final PDF, it is not displayed correctly. Also, remote PDF links do not work correctly.

This program is able to extract the page mode and named targets as PDFmark from PDF. In this way, you can obtain embedded PDF files that have kept this information.

Usage:

```
$ extractpdfmark TeX-System-Outputted.pdf > Extracted-PDFmark.ps
```

```
$ gs -q -dBATCH -dNOPAUSE -sDEVICE=pdfwrite -dPDFDontUseFontObjectNum
-sOutputFile=Final.pdf TeX-System-Outputted.pdf Extracted-
PDFmark.ps
```

2105 *facsimile* – Document class for preparing faxes

Web page on CTAN <https://ctan.org/pkg/facsimile>

name	facsimile
caption	Document class for preparing faxes
author	Bronger, Torsten
copyright	Torsten Bronger (2003)
license	lppl = The LaTeX Project Public License (free)
version	1.0
description	(no language specified) The <i>facsimile</i> class provides a simple interface for creating a document for sending as a fax, with LaTeX. The class covers two areas: • First, a title page is created with a detailed fax header; • second, every page gets headers and footers so that the recipient can be sure that every page has been received and all pages are complete, and in the correct order. The class evolved from the <i>fax</i> package, and provides much better language support.

version	2.1 (2018-10-27)
last changes	2018-10-27
year	2018
description	(no language specified) This package can be used to generate invoices for Belgian individuals who do not have a VAT number and who wish to do occasional work, or to carry out paid additional activities during their free time up to 6,000 euros per calendar year (amount indexed annually) without having to pay tax or social security contributions (see the website Activités complémentaires). The package can also generate expense reports. All totals are calculated automatically, in the invoice and in the expense report. The package depends on calctab , ifthen , hyperref , fancyhdr , multirow , eurosym , color , and colortbl .

Web page on CTAN	https://ctan.org/pkg/fancyhandout
name	fancyhandout
caption	A LaTeX class for producing nice-looking handouts
author	Friedl, Sebastian
copyright	Sebastian Friedl (2017-2018)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	(2018-01-22)
last changes	2018-01-22
year	2018
description	(no language specified) This package breaks with some of LaTeX’s principles and redefines basic LaTeX commands with the aim of producing well-designed and clearly structured handouts: A sans-serif font is used by default; sections are not numbered, but highlighted by underlining; head- and footline display document information; and in order to avoid too much whitespace around the text the margin sizes are adjusted to smaller values. All in all, <i>fancyhandout</i> provides a means of typesetting documents not exclusively consisting of running text in a beautiful way. <i>fancyhandout</i> depends on the following other LaTeX packages: <i>csquotes</i> , <i>enumitem</i> , <i>etoolbox</i> , <i>fancyhdr</i> , <i>geometry</i> , and <i>xcolor</i> .

2126 *fancymag* – A LuaLaTeX package for academic magazines and scientific

Web page on CTAN	https://ctan.org/pkg/fancymag
name	<code>fancymag</code>
caption	A LuaLaTeX package for academic magazines and scientific
author	Halder, Ashadul
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
license	ofl = The SIL Open Font License (free)
version	1.0
description	(no language specified) <code>fancymag</code> is a LaTeX package designed to provide enhanced typographic styling for academic and editorial documents. It integrates a selection of freely licensed display fonts to help authors create visually appealing layouts for magazines, scientific books, and other publication-quality material. The package must be compiled with LuaLaTeX and depends on OpenType fonts included in the package. To function correctly, the accompanying <code>fonts/</code> and <code>img/</code> directories must be present, as described in the documentation.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/luatex/latex//fancymag/README.md

2128 *fancypar* – Decoration of individual paragraphs

Web page on CTAN <https://ctan.org/pkg/fancypar>

name *fancypar*
caption Decoration of individual paragraphs
author Medina Arellano, Gonzalo
copyright Gonzalo Medina (2010,2019,2021)
license lpl1.3 = The LaTeX Project Public License 1.3 (free)
version 1.3
description (no language specified) Decorates individual paragraphs of a document, offering five pre-defined styles. The command offers an optional ‘key-value’ argument with the user may define parameters of the selected style.

Predefined styles offer a spiral-notebook, a zebra-like, a dashed, a marked design, and an underlined style. Users may also define their own styles.

Decorated paragraphs may not include displayed mathematics.

documentation (no language specified) *Readme*: <https://ctan.org/tex-archive/macros/latex/contrib/fancypar/README>

2144 fastpictex – Simple specification of PicTeX diagrams

Web page on CTAN <https://ctan.org/pkg/fastpictex>

name	fastpictex
caption	Simple specification of PicTeX diagrams
author	Stauss, Harald M.
license	gpl = GNU General Public License (free)
version	0.9

2145 *fax* – Document class for preparing faxes

description	(no language specified) FastPicTeX is a preprocessor for PicTeX . It reads macros (in a language that is very easy to write) and converts them to PicTeX code that can be included in LaTeX documents. FastPicTeX is specifically designed for diagrams of numbered data material, such as line graphs, bar graphs, or xy graphs.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/support/fastpictex/README
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/support/fastpictex/doc/fastpictex.pdf

2161 *fenixpar* – One-shot changes to token registers such as `\everypar`

Web page on CTAN	https://ctan.org/pkg/fenixpar
name	<code>fenixpar</code>
caption	One-shot changes to token registers such as <code>\everypar</code>
author	Música de Rivera, Javier
license	lppl = The LaTeX Project Public License (free)
version	0.92
description	(no language specified) The bundle provides two packages, <code>fenixtok</code> and <code>fenixpar</code>. The <code>fenixtok</code> package provides user macros to add material to a token register; the material will be (automatically) removed from the token register when the register is executed. Material may be added either to the left or to the right, and care is taken not to override any redefinition that may be included in the token register itself. The <code>fenixpar</code> package uses the macros of <code>fenixtok</code> to provide a user interface to manipulation of the <code>\everypar</code> token register. The packages require the e-TeX extensions; with them, they work either with Plain TeX or with LaTeX.
documentation	(no language specified) <i>Readme:</i> https://ctan.org/tex-archive/macros/generic/fenixpar/README
on CTAN	https://ctan.org/tex-archive/macros/generic/fenixpar

2163 *fetamont* – Extended version of Knuth’s logo typeface

Web page on CTAN <https://ctan.org/pkg/fetamont>

name	fetamont
caption	Extended version of Knuth’s logo typeface
author	Romer, Linus
copyright	Linus Romer (2014-2017)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	(2017-04-15)
last changes	2017-04-15
year	2017
description	(no language specified) The fetamont typeface was designed in Metafont and extends the Logo fonts to complete the T1 encoding. The designs of the glyphs A, E, F, M, N, O, P, S and T are based on the Metafont constructions by D. E. Knuth. The glyphs Y and l imitate the shapes of the corresponding glyphs in the METATYPE1 logo.

description (no language specified) This bundle provides two packages, *bibpes* and *fetchbibpes*. This pair of packages was motivated by a friend, who was preparing Bible studies lessons using a combination of the application *e-Sword* and LaTeX. He wanted a ‘database’ of Bible packages from which he could simply ‘fetch’ passages into the LaTeX source file.

Package *bibpes* is used to develop a database of verses, and package *fetchbibpes* is used to fetch the verses.

version	1.0 (2015-08-11)
last changes	2015-08-11
year	2015
description	(no language specified) With standard LaTeX you are able to check for the class in use invoking the kernel command <code>\@ifclassloaded</code>. However, doing so you cannot get the explicit class name, unless you want to loop over every possible class name until <code>\@ifclassloaded</code> returns true — don't do that! With the help of the present package you can obtain the name of the current class with significantly less effort. Just load the package as usual: <code>\usepackage{fetchcls}</code>; then, the control sequence <code>\classname</code> will hold the name you were looking for.

2170 *feynmf* – Macros and fonts for creating Feynman (and other) diagrams

Web page on CTAN <https://ctan.org/pkg/feynmf>

name	feynmf
caption	Macros and fonts for creating Feynman (and other) diagrams
author	Ohl, Thorsten
copyright	Thorsten Ohl (1989, 1990, 1992-1996)
license	gpl = GNU General Public License (free)
version	1.08
description	(no language specified) The feynmf package provides an interface to Metafont (inspired by the facilities of mfpic) to use simple structure specifications to produce relatively complex diagrams. (The feynmp package, also part of this bundle, uses MetaPost in the same way.) While the package was designed for Feynman diagrams, it could in principle be used for diagrams in graph and similar theories, where the structure is semi-algorithmically determined.

Web page on CTAN <https://ctan.org/pkg/ffslides>

name	<code>ffslides</code>
caption	Freeform slides based on the article class
author	Wolters, Mark A.
copyright	Mark A. Wolters (2015)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	(2015-11-19)
last changes	2015-11-19
year	2015
description	(no language specified) The <code>ffslides</code> (“freeform slides”) class is intended to make it easier to place various types of content freely on the page, and therefore easier to design documents with a strong visual component: presentations, posters, research or lecture notes, and so on. The goal of the class is to be less rigid and less complex than some of the popular presentation-making options. It is essentially a small set of macros added to the article class. A well-organized template file is included, and the documentation is itself an extensive example of the class’s capabilities.

2180 *fifinddo* – Filtering files using TeX

Web page on CTAN <https://ctan.org/pkg/fifinddo>

name	fifinddo
caption	Filtering files using TeX
author	Lück, Uwe
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.61
description	(no language specified) The package parses plain text or TeX files, using TeX; it generalises the philosophy behind docstrip, based on TeX macro argument processing. The results are not then processed, but written to another file (possibly for later processing by TeX). The package finds practical application in the author's makedoc package. The package is part of the author's nicetext bundle.

2199 *figsize* – Auto-size graphics

Web page on CTAN <https://ctan.org/pkg/figsize>

name FigSize
caption Auto-size graphics
author Tanbakuchi, Anthony A.
license lppl = The LaTeX Project Public License (free)
version 0.1
description (no language specified) The FigSize package enables automatic sizing of graphics, especially when including graphics with the [graphicx](#) package. The user only has to specify the number of graphics that should fit to a page or fraction thereof and the package will dynamically calculate the correct graphics sizes relative to the page size. Thus, graphics can be auto-sized to fill a whole page or fraction and manual changes of graphic sizes are never needed when changing document layouts. Finally, the package's dynamic lengths can be used to allow other document element sizes to be dynamic.

2202 *filecontents* – Create an external file from within a LaTeX document

Web page on CTAN <https://ctan.org/pkg/filecontents>

name	<code>filecontents</code>
caption	Create an external file from within a LaTeX document
author	Pakin, Scott
copyright	Scott Pakin (2011-2023)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.5a (2023-04-02)
last changes	2023-04-02
year	2023

description	(no language specified) LaTeX2e’s <code>filecontents</code> and <code>filecontents*</code> environments enable a LaTeX source file to generate external files as it runs through LaTeX. However, there are two limitations of these environments: they refuse to overwrite existing files, and they can only be used in the preamble of a document. The <code>filecontents</code> package removes these limitations, letting you overwrite existing files and letting you use <code>filecontents</code> / <code>filecontents*</code> anywhere. As of September 2019 the author tells us: ”This package is no longer necessary due to its functionality having moved into recent LaTeX kernels. It’s probably better not to move the package to obsolete because users may need it to rebuild old documents. Version 1.5 provides full functionality when run with an older kernel but issues a warning message and disables itself when run with a newer kernel.” Supply the <code>overwrite</code> option to LaTeX’s built-in <code>filecontents</code> environment to mimic this package’s behavior: <pre>\begin{filecontents}[overwrite]{my- file}...\end{filecontents}</pre>

last changes	2019-09-29
year	2019
description	(no language specified) The package provides two environments called <code>filecontentsdef</code> and <code>filecontentshere</code>. They are derived from the LaTeX <code>filecontents</code> environment as provided by Scott Pakin's <code>filecontents</code> package. In addition to the file creation they either store the (verbatim) contents in a macro (<code>filecontentsdef</code>) or typeset them (verbatim) on the spot (<code>filecontentshere</code>). The author developed the package to display TeX code verbatim in documentation and the same time produce the corresponding files during the LaTeX run in order to embed them in the PDF as file attachment annotations (by using Scott Pakin's package <code>attachfile</code>).

2209 *filemod* – Provide file modification times, and compare them

Web page on CTAN	https://ctan.org/pkg/filemod
name	<code>filemod</code>
caption	Provide file modification times, and compare them
author	Scharrer, Martin
copyright	Martin Scharrer (2011)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.2
description	(no language specified) The package provides macros to read and compare the modification dates of files. The files may be <code>.tex</code> files, images or other files (as long as they can be found by LaTeX). It uses the <code>\pdffilemoddate</code> primitive of pdfLaTeX to find the file modification date as PDF date string, parses the string and returns the value to the user. The package will also work for DVI output with recent versions of the LaTeX compiler which uses pdfLaTeX in DVI mode. The functionality is provided by purely expandable macros or by faster but non-expandable ones.

2216 *finomaton* – Comfortably draw and typeset finite state machines

Web page on CTAN <https://ctan.org/pkg/finomaton>

name	<code>Finomaton</code>
caption	Comfortably draw and typeset finite state machines
author	Triska, Markus
copyright	Markus Triska (2003, 2006, 2007)
license	gpl = GNU General Public License (free)
version	1.0
description	(no language specified) Finomaton is a TCL program that allows users to comfortably draw and typeset finite state machines (automata). The resulting graphs can be exported to plain MetaPost and subsequently be included in TeX and LaTeX documents for excellent typesetting quality. In contrast to many other packages, the mouse can be used to interactively move objects around. States are magnetic to facilitate connection, and any TeX command can be embedded in the labels of states and lines.

2231 *fitr* – Set a rectangular destination and jump to itWeb page on CTAN <https://ctan.org/pkg/fitr>

name	FitR
caption	Set a rectangular destination and jump to it
author	Story, Donald P.
copyright	D. P. Story (2012-2020)
license	lpl = The LaTeX Project Public License (free)
version	1.3.2 (2020-07-09)
last changes	2020-07-09
year	2020
description	(no language specified) The package is an implementation of the FitR view-type destination as described in the PDF Reference; it defines one new command <code>\jdRect</code>. The command (optionally) sets a jump to and/or sets a destination of a FitR (Rectangle). (Can you see where <code>\jdRect</code> comes from?). The package requires eforms (part of the AeB) and collectbox (by Martin Scharrer). Drivers supported are dvips and dvipsone (using Adobe Distiller as the PDF creator); pdfTeX (including LuaTeX); and dvipdfm, dvipdfmx, and XeTeX. The package was developed in response to a user of the AeB Bundle who was interested in developing documents for students with low vision; the idea is to magnify regions of the document so the student can read more comfortably. Optional special effects are included (JavaScript functions) to help focus one the rectangle as it is magnified, and as the previous view is restored.

2242 *fixltxhyph* – Allow hyphenation of partially-emphasised substringsWeb page on CTAN <https://ctan.org/pkg/fixltxhyph>

name	fixltxhyph
caption	Allow hyphenation of partially-emphasised substrings
author	Beccari, Claudio
copyright	Claudio Beccari (2011-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.5
description	(no language specified) The package fixes the problem of TeX failing to hyphenate letter strings that seem (to TeX) to be words, but which are followed by an apostrophe and then an emphasis command. The cause of the problem is not the apostrophe, but the font change in the middle of the string. The problem arises in Catalan, French, Italian and Romansh.

version	0.9.1 (2022-10-06)
last changes	2022-10-06
year	2022
description	(no language specified) LaTeX's default style of typesetting mathematics does not comply with the International Standards ISO 31-0:1992 to ISO 31-13:1992 which require that uppercase Greek letters always be typeset upright, as opposed to italic (even though they usually represent variables) and allow for typesetting of variables in a boldface italic style (even though the required fonts are available). This package ensures that uppercase Greek be typeset in italic style, that upright Δ and Ω symbols are available through the commands <code>\upDelta</code> and <code>\upOmega</code> ; and provides a new math alphabet <code>\mathbold</code> for boldface italic letters, including Greek. This package used to be part of the was bundle, but has now become a package in its own right.

2244 *fixme* – Collaborative annotation tool for LaTeXWeb page on CTAN <https://ctan.org/pkg/fixme>

name	FiXme
caption	Collaborative annotation tool for LaTeX
author	Verna, Didier
copyright	Didier Verna (1998-2002, 2004-2007, 2009, 2013, 2017-2019)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	4.5 (2019-01-03)
last changes	2019-01-03
year	2019
description	(no language specified) FiXme is a collaborative annotation tool for LaTeX documents. Annotating a document here refers to inserting meta-notes, that is, notes that do not belong to the document itself, but rather to its development or reviewing process. Such notes may involve things of different importance levels, ranging from simple "fix the spelling" flags to critical "this paragraph is a lie" mentions. Annotations like this should be visible during the development or reviewing phase, but should normally disappear in the final version of the document. FiXme is designed to ease and automate the process of managing collaborative annotations, by offering a set of predefined note levels and layouts, the possibility to register multiple authors, to reference annotations by listing and indexing etc. FiXme is extensible, giving you the possibility to create new layouts or even complete "themes", and also comes with support for AUCTeX.

2248 fixtounicode – Utility functions for setting tounicode mappings for 7/8 bit fonts

Web page on CTAN <https://ctan.org/pkg/fixtounicode>

name	fixtounicode
caption	Utility functions for setting tounicode mappings for 7/8 bit fonts
author	Rees, Clea F.
copyright	Clea F. Rees (2025-2026)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.1.1

description	(no language specified) This package provides utility functions in expl3 and LaTeX2e syntax for setting tounicode mappings for 7/8 bit fonts. The package provides a unified interface which enables mappings for both pdfTeX and LuaTeX. The aim is to make it easier to make legacy (text) symbol packages, which often use arbitrary glyph names and encodings, accessible for the two engines currently capable of producing accessible PDFs. The package provides a limited workaround for LuaTeX 1.22 and earlier, which make the provision of such mappings more challenging. Full support requires pdfTeX or LuaTeX 1.24 or later.

2260 fldigigal – Create a Flash slide show of digital photos

Web page on CTAN <https://ctan.org/pkg/fldigigal>

name	fldigigal
caption	Create a Flash slide show of digital photos
author	Story, Donald P.
copyright	D. P. Story (2010-2020)
license	lppl1 = The LaTeX Project Public License 1 (free)
version	0.6 (2020-08-08)
last changes	2020-08-08
year	2020

description	(no language specified) The package uses the rmannot package (thus requiring an Adobe Distiller workflow) to create what the author calls "an AcroTeX Flash Digital Gallery"; that is, a Flash slide show that displays a series of digital images (PNG, JPG or GIF formats). The document author describes the digital images (path and caption) from the LaTeX source; on compilation, <i>fldigigal</i> writes an XML file, which Distiller embeds in the PDF. The digital images may be embedded in the PDF, or be accessed remotely (reducing filesize). Three layouts are offered: vertical thumbnails, horizontal thumbnails, or no thumbnails. This package has become obsolete after December 2020. Since December 2020, Adobe no longer supports Flash player (SWF, FLV). This package uses a custom SWF file (<code>fdg_ht1.swf</code> , eg); as a result this package will no longer function in Adobe Acrobat Reader DC. The package will continue to produce PDFs as designed, but only if built using Acrobat XI (or a version Acrobat prior to 2021) and viewed in Adobe Acrobat Reader XI (or a version of Reader prior 2021).

2261 flexipage – Flexible page geometry with marginaliaWeb page on CTAN <https://ctan.org/pkg/flexipage>

name	flexipage
caption	Flexible page geometry with marginalia
author	Vrba, Anton
copyright	Anton Vrba (2022)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.02 (2023-03-17)
last changes	2023-03-17
year	2023
description	(no language specified) This package allows easy page layout if marginalia is required. Mid document changes are possible such as: new marginal width, full width text, and landscape text without marginal. Partners well with the package sidenotesplus . The package also aids the layout for book printing, allowing for binding corrections and adding page bleed, if required.

2263 *flipbook* – Typeset flipbook animations, in the corners of documents

Web page on CTAN <https://ctan.org/pkg/flipbook>

name flipbook
 caption Typeset flipbook animations, in the corners of documents
 author Buffet, Olivier
 copyright Olivier Buffet (2011)
 license lppl = The LaTeX Project Public License (free)
 version 0.2
 description (no language specified) The package provides techniques for adding flip book
 animations in the corner of your LaTeX documents (using images or ASCII
 art).
 Animations are defined as a set of numbered files (e.g., "im1.pdf", "im2.pdf",
 "im3.pdf", ...). The package relies on [fancyhdr](#) to control the corners.

2276 *flowframtk* – Vector graphics application with support for *flowfram.sty*

Web page on CTAN	https://ctan.org/pkg/flowframtk
Alias	jpgfdraw
name	FlowframTk
caption	Vector graphics application with support for <i>flowfram.sty</i>
author	Talbot, Nicola
license	gpl = GNU General Public License (free)
version	0.8.4

description	(no language specified) FlowframTk is a graphics application written in Java designed for use with flowfram and pgf, but can also be used to create standalone image files. You can use FlowframTk to: • Construct frames for use with the flowfram package. • Construct shapes using lines, moves and cubic Bezier segments. • Edit shapes by changing the defining control points. • Add symmetry to shapes. • Convert shapes into patterns (rotational, scaled, spiral). • Incorporate text and bitmap images (for annotation and background effects). • Display text along a shape. • Extract the parameters for TeX's <code>\parshape</code> command and for <code>\shapepar</code> (defined in the shapepar package). Pictures can be saved in FlowframTk's native binary format (JDR) or native ascii format (AJR) or can be exported as: • a <code>pgfpicture</code> environment for use in LaTeX documents with the pgf package; • a LaTeX class or package that loads the flowfram package; • a PostScript file; • a PDF file; • a PNG image file; or • an SVG image file. Alternative text can be specified to use when exporting to a LaTeX file (e.g. if the text contains symbols or if it should be set in maths mode). Mappings can be used to specify what LaTeX font declarations should be used when exporting to a LaTeX file. To install, download and run the installer application <code>flowframtk-version-installer.jar</code> (where <i>version</i> is the version number). This application replaces the now obsolete JpgfDraw.

2281 *fmtcount* – Display the value of a LaTeX counter in a variety of formatsWeb page on CTAN <https://ctan.org/pkg/fmtcount>

name	<code>fmtcount</code>
caption	Display the value of a LaTeX counter in a variety of formats
author	Nijenhuis, Erik
author	Talbot, Nicola
author	Belaïche, Vincent
copyright	Nicola Talbot, Vincent Belaïche and Erik Nijenhuis (2024-2025)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	3.12 (2025-12-02)
last changes	2025-12-02
year	2025

description	(no language specified) The package provides commands that display the value of a LaTeX counter in a variety of formats (ordinal, text, hexadecimal, decimal, octal, binary etc). The package offers some multilingual support; configurations for use in English (both British and American usage), French (including Belgian and Swiss variants), German, Italian, Portuguese and Spanish documents are provided. This package was originally provided as part of the author's datetime package, but is now distributed separately.

2285 fncylab – Alter the format of \label references

Web page on CTAN <https://ctan.org/pkg/fncylab>

name	fncylab
caption	Alter the format of \label references
author	Fairbairns, Robin
author	Carlisle, David
license	lppl = The LaTeX Project Public License (free)
version	1.1
description	(no language specified) LaTeX provides a mechanism for altering the appearance of references to labels, but it's somewhat flawed, and requires that the user manipulate internal commands. The package solves the problem, by providing a <code>\labelformat</code> command for changing the format of references to labels. The package also provides a <code>\Ref</code> command to make reference to such redefined labels at the start of a sentence.

description	(no language specified) Macros to Change Text and Mathematics fonts in TeX: 45 Beautiful Variants The macros are written for plain TeX and may be used with other packages like AmSTeX, eplain, etc. They also work with XeTeX. The macros allow users to change the fonts (for both text and mathematics) in their TeX document with only one statement. The fonts may be used readily at various predefined sizes. All the fonts called by these macro files are free and are included in current MiKTeX and TeX Live distributions.

2303 font-change-xetex – Macros to change text and mathematics fonts in plain XeTeXWeb page on CTAN <https://ctan.org/pkg/font-change-xetex>

name	font-change-xetex
caption	Macros to change text and mathematics fonts in plain XeTeX
author	Dhawan, Amit Raj
license	other-free = Free license not otherwise listed (free)
version	2016.1
description	(no language specified) This package consists of macros that can be used to typeset "plain" XeTeX documents using any OpenType or TrueType font installed on the computer system. The macros allow the user to change the text mode fonts and some math mode fonts. For any declared font family, various font style, weight, and size variants like bold, italics, small caps, etc., are available through standard and custom TeX control statements. Using the optional argument of the macros, the available XeTeX font features and OpenType tags can be accessed. Other features of the package include activating and deactivating hanging punctuation, and support for special Unicode characters.

2311 fontbl – A font sampler

version	2.0.1 (2025-05-24)
last changes	2025-05-24
year	2025
description	(no language specified) The package adds several new font axes on top of LaTeX's New Font Selection Scheme. In particular, it splits the shape axis into a primary and a secondary shape axis, and it adds three new axes to deal with the different figure versions offered by many professional fonts. This package has nowadays been deprecated in favour of the figureversions package.

2313 *fontch* – Changing fonts, sizes and encodings in Plain TeX

Web page on CTAN <https://ctan.org/pkg/fontch>

name	<code>fontch</code>
caption	Changing fonts, sizes and encodings in Plain TeX
author	Medina, Rodrigo
license	lppl = The LaTeX Project Public License (free)
version	2.2
description	(no language specified) The <code>fontch</code> macros allow the user to change font size and family anywhere in a plain TeX document. Sizes of 8, 10, 12, 14, 20 and 24 points are available. A sans serif family (<code>\sf</code>) is defined in addition to the families already defined in plain TeX. Optional support for Latin Modern T1 and TS1 fonts is given. There are macros for non-latin1 letters and for most TS1 symbols. Math mode always uses CM fonts. A command for producing doubled-spaced documents is also provided. The present version of the package is designed to deal with the latest release of the Latin Modern fonts version 1.106. Unfortunately, it can no longer support earlier versions of the fonts, so an obsolete version of the package is retained for users who don't yet have access to the latest version of the fonts.

author	Jeffrey, Alan
author	Rahtz, Sebastian
author	Vieth, Ulrik
author	Hellström, Lars
copyright	The fontinst maintenance team (1998-2001)
license	lppl = The LaTeX Project Public License (free)
version	1.933

description	(no language specified) TeX macros for converting Adobe Font Metric files to TeX metric and virtual font format. Fontinst helps mainly with the number crunching and shovelling parts of font installation. This means in practice that it creates a number of files which give the TeX metrics (and related information) for a font family that (La)TeX needs to do any typesetting in these fonts. Fontinst furthermore makes it easy to create fonts containing glyphs from more than one base font, taking advantage of (e.g.) "expert" font sets. Fontinst cannot examine files to see if they contain any useful information, nor automatically search for files or work with binary file formats; those tasks must normally be done manually or with the help of some other tool, such as the <code>pltotf</code> and <code>vptovf</code> programs.

2323 fontools – Tools to simplify using fonts (especially TT/OTF ones)

Web page on CTAN <https://ctan.org/pkg/fontools>

Alias autoinst

name fontools

caption Tools to simplify using fonts (especially TT/OTF ones)

author Penninga, Marc

copyright Marc Penninga (2005-2026)

license gpl2 = GNU General Public License, version 2 (free)

version (2026-04-22)

last changes 2026-04-22

year 2026

description (no language specified) This package provides tools to simplify using OpenType fonts with LaTeX.

By far the most important program in this bundle is autoinst:

- `autoinst` – a wrapper script around Eddie Kohler’s LCDF TypeTools. Autoinst aims to automate the installation of OpenType fonts in LaTeX by calling the LCDF TypeTools (with the correct options) for all fonts you wish to install, and generating the necessary `.fd` and `.sty` files.

In addition, this bundle contains a few other, less important utilities:

- `afm2afm` – re-encode `.afm` files,
- `ot2kpx` – extract kerning pairs from OpenType fonts,
- `splitttc` – split an OpenType Collection file (`ttc` or `otc`) into individual fonts.

version	0.3 (2025-02-22)
last changes	2025-02-22
year	2025
description	(no language specified) Font encodings, metrics and Lua script fragments for generating font support packages for 8-bit engines with l3build . Optional template-based system enables the automatic generation of font tables and l3build tests. Easy addition of variable scaling to <code>fd</code> files (unsupported by some tools). Primarily designed for fontinst , but can be adapted for use with other programmes. Default configuration is intended to be cross-platform and require only tools included in TeX Live, but the documentation includes a simple adaption for integration with FontForge and GNU make.

version	1.6e (2026-04-19)
last changes	2026-04-19
year	2026
description	(no language specified) This is a package version of <code>nfssfont.tex</code> (part of the LaTeX distribution); it enables you to print a table of the characters of a font and/or some text (for demonstration or testing purposes), from within a document. (Packages such as testfont and <code>nfssfont.tex</code> provide these facilities, but they run as interactive programs: the user is expected to type details of what is needed.) Note that the package mftinc also has a <code>\fonttable</code> function; the documentation explains how avoid a clash with that package.

2337 *footbib* – Bibliographic references as footnotes

Web page on CTAN <https://ctan.org/pkg/footbib>

name	footbib
caption	Bibliographic references as footnotes
author	Domenjoud, Eric
license	lppl = The LaTeX Project Public License (free)
version	2.0.7
description	(no language specified) The package makes bibliographic references appear as footnotes. It defines a command <code>\footcite</code> which is similar to the LaTeX <code>\cite</code> command but the references cited in this way appear at the bottom of the pages. This ‘foot bibliography’ does not conflict with the standard one and both may exist simultaneously in a document. The command <code>\cite</code> may still be used to produce the standard bibliography. The foot bibliography uses its own style and bibliographic database which may be specified independently of the standard one. Any standard bibliography style may be used.

2338 *footmisc* – A range of footnote options

Web page on CTAN <https://ctan.org/pkg/footmisc>

name	<code>footmisc</code>
caption	A range of footnote options
author	Fairbairns, Robin
author	Mittelbach, Frank
copyright	Frank Mittelbach (2018-2025)
copyright	Robin Fairbairns (1995-2011)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	7.0b (2025-05-09)
last changes	2025-05-09
year	2025
description	(no language specified) A collection of ways to change the typesetting of footnotes. The package provides means of changing the layout of the footnotes themselves (including setting them in ‘paragraphs’ — the <code>para</code> option), a way to number footnotes per page (the <code>perpage</code> option), to make footnotes disappear in a ‘moving’ argument (<code>stable</code> option) and to deal with multiple references to footnotes from the same place (<code>multiple</code> option). The package also has a range of techniques for labelling footnotes with symbols rather than numbers. Some of the functions of the package are overlap with the functionality of other packages. The <code>para</code> option is also provided by the <code>manyfoot</code> and <code>bigfoot</code> packages, though those are both also portmanteau packages. (Don’t be seduced by <code>fnpara</code> , whose implementation is improved by the present package.) The <code>perpage</code> option is also offered by <code>footnpag</code> and by the rather more general-purpose <code>perpage</code>

2340 footnote – Improve on LaTeX’s footnote handling

Web page on CTAN	https://ctan.org/pkg/footnote
name	footnote
caption	Improve on LaTeX’s footnote handling
author	Wooding, Mark
copyright	Mark Wooding (1996)

license	gpl = GNU General Public License (free)
version	1.13
description	(no language specified) The footnote package provides commands for handling footnotes rather more fluently than LaTeX manages. Several LaTeX commands and environments (for example, <code>\parbox</code>, <code>minipage</code> and <code>tabular</code>) "trap" footnotes. The footnote package provides an environment <code>savenotes</code>, that can be wrapped around a command or environment; at <code>\end{savenotes}</code> all the footnotes within will emerge. The command <code>\makesavenoteenv</code> will generate environments that behave as if they've been wrapped in a <code>savenotes</code> environment. The package also provides <code>footnote</code> and <code>footnotetext</code> environments which you can put verbatim inside. The package is part of the <code>mdwtools</code> bundle.

2345 *forarray* – Using array structures in LaTeX

Web page on CTAN <https://ctan.org/pkg/forarray>

name	<code>forarray</code>
caption	Using array structures in LaTeX
author	Schröppel, Christian
copyright	Christian Schröppel (2008)
license	lppl = The LaTeX Project Public License (free)
version	1.01
description	(no language specified) The package provides functionality for processing lists and array structures in LaTeX. Arrays can contain characters as well as TeX and LaTeX commands, nesting of arrays is possible, and arrays are processed within the same brace level as their surrounding environment. Array levels can be delimited by characters or control sequences defined by the user. Practical uses of this package include data management, construction of lists and tables, and calculations based on the contents of lists and arrays.

2347 forest – Drawing (linguistic) trees

Web page on CTAN <https://ctan.org/pkg/forest>

name	forest
caption	Drawing (linguistic) trees
author	Živanović, Sašo
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.1.5 (2017-07-14)
last changes	2017-07-14
year	2017
description	(no language specified) The package provides a PGF/TikZ-based mechanism for drawing linguistic (and other kinds of) trees. Its main features are: • a packing algorithm which can produce very compact trees; • a user-friendly interface consisting of the familiar bracket encoding of trees plus the key-value interface to option-setting; • many tree-formatting options, with control over option values of individual nodes and mechanisms for their manipulation; • the possibility to decorate the tree using the full power of PGF/TikZ; and • an externalization mechanism sensitive to code-changes.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/graphics/pgf/contrib/forest/README

2356 *forms16be* – Initialize form properties using big-endian encoding

Web page on CTAN <https://ctan.org/pkg/forms16be>

name	<code>forms16be</code>
caption	Initialize form properties using big-endian encoding
author	Story, Donald P.
copyright	D. P. Story (2017-2019)
license	lpl1.2 = The LaTeX Project Public License 1.2 (free)
version	1.3 (2019-03-20)
last changes	2019-03-20
year	2019
description	(no language specified) This package provides support for UTF-16BE Unicode character encoding (called a big-endian character string) for the text string type (PDF Reference, version 1.7, beginning on page 158). Text strings are used in "text annotations, bookmark names, article threads, document information, and so forth" (to partially quote page 158). The particular application is to set property values of form fields, at least those properties that take the text strings as its value. The package contains support for Basic Latin plus the ability to enter any unicode character using the notation <code>\uXXXX</code>, where <code>XXXX</code> are four hex digits. The Package works for dvips/Distiller, pdfLaTeX, LuaLaTeX, and XeLaTeX.

description	(no language specified) This package provides LaTeX, pdfLaTeX, XeLaTeX and LuaLaTeX support for the Forum font, designed by Denis Masharov. Forum has antique, classic "Roman" proportions. It can be used to set body texts and works well in titles and headlines too. It is truly multilingual, with glyphs for Central and Eastern Europe, Baltics, Cyrillic and Asian Cyrillic communities. There is currently just a regular weight and an artificially emboldened bold.

name	<i>fpl</i>
caption	SC and OsF fonts for URW Palladio L
author	Stubner, Ralf
copyright	Ralf Stubner (2004, 2005)
license	gpl2 = GNU General Public License, version 2 (free)
license	lppl = The LaTeX Project Public License (free)
version	1.003 (2018-12-11)
last changes	2018-12-11
year	2018
description	(no language specified) The FPL Fonts provide a set of SC/OsF fonts for URW Palladio L which are compatible with respect to metrics with the Palatino SC/OsF fonts from Adobe. Note that it is not my aim to exactly reproduce the outlines of the original Adobe fonts. The SC and OsF in the FPL Fonts were designed with the glyphs from URW Palladio L as starting point. For some glyphs (e.g. ‘o’) I got the best result by scaling and boldening. For others (e.g. ‘h’) shifting selected portions of the character gave more satisfying results. All this was done using the free font editor FontForge. The kerning data in these fonts comes from Walter Schmidt’s improved Palatino metrics. LaTeX use is enabled by the <code>mathpazo</code> package, which is part of the psnfss distribution.

version	1.2.3 (2025-06-11)
last changes	2025-06-11
year	2025
description	(no language specified) The primary goal of this package is to provide a minimal and user-friendly syntax for constructing large and complex <i>semantic derivations</i>, following the specific notational style used at Goethe University Frankfurt. It includes a comprehensive set of commands for text formatting and various types of bracketing, ensuring a consistent style — particularly when distinguishing between meta-language and object-language within a single derivation or formula. Formula-Style is loosely based on the accompanying material to an introductory course to linguistic semantics by Prof. Dr. Thomas Ede Zimmermann. The package brings together and refines a collection of LaTeX commands and concepts developed over the years within the Department of Linguistics at the Goethe-Universität at Frankfurt am Main. In the process of preparing research papers, assignments, and examinations, numerous custom LaTeX headers and commands were shared within the department — some mutually compatible, others not. Note: The package name is an abbreviation of "Frankfurt Goethe Linguistic".

2386 freemath – LaTeX maths without backslashesWeb page on CTAN <https://ctan.org/pkg/freemath>

name	freemath
caption	LaTeX maths without backslashes
author	plante
copyright	plante (2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1
description	(no language specified) This package allows for the omission of backslashes from most math mode commands. Specifically, any consecutive string of at least two (Latin) letters appearing in math mode will automatically be turned into the control sequence with the same name, if it exists. The package provides the <code>\freemathon</code> and <code>\freemathoff</code> commands which respectively activate and deactivate this behaviour. It is <i>disabled</i> by default upon loading. Regular commands initiated by a backslash may of course still be used when <i>freemath</i> is active, and can furthermore be freely mixed with backslash-free commands.

2390 frenchle – French macros, usable stand-alone or with Babel

Web page on CTAN	https://ctan.org/pkg/frenchle
name	frenchle
caption	French macros, usable stand-alone or with Babel
author	Juillerat, Raymond
author	Gaulle, Bernard
license	lppl = The LaTeX Project Public License (free)
version	5.9995
description	(no language specified) This is a redistribution and repackaging of the late Bernard Gaulle's "light" package to typeset French documents according to the rules of the "Imprimerie Nationale". The package offers a package, two Babel language definition files (<code>french.ldf</code> and <code>frenchle.ldf</code>), and a package to enable the non-standard definition files to be loaded into an unmodified Babel. The user may simply use <code>frenchle.sty</code> if typesetting a French-only document, but should use Babel with the <code>frenchle</code> option for a multilingual document. Note that this package is now obsolete; users of the package are advised to switch to using e-french.

2395 *fretplot* – Create scale and chord diagrams for guitar-like instruments

Web page on CTAN <https://ctan.org/pkg/fretplot>

name *fretplot*
caption Create scale and chord diagrams for guitar-like instruments
author Ganguly, Soumendra
copyright Soumendra Ganguly (2025)
license lpl1.3 = The LaTeX Project Public License 1.3 (free)
version 1.0.0
description (no language specified) This LuaLaTeX package provides batch generation of scale and chord diagrams for plucked string instruments, such as the guitar.

- **Flexible and Automated:** Highly customizable and automatable via simple, powerful file formats for describing fretboard diagrams. Easily generate batches of diagrams.
- **Attractive Defaults:** Comes with sensible, visually appealing default settings.
- **Music Theory Aware:** Includes easy-to-use LaTeX macros that understand music theory. Render guitar scale diagrams by specifying the musical scale or scale type via built-in macros or directly via degree, pitch class, or interval formulae.

2401 **frontespizio** – Create a frontispiece for Italian theses

Web page on CTAN <https://ctan.org/pkg/frontespizio>

name	frontespizio
caption	Create a frontispiece for Italian theses
author	Gregorio, Enrico
copyright	Enrico Gregorio (2008)
license	lpl = The LaTeX Project Public License (free)

version	1.4a
description	(no language specified) Typesetting a frontispiece independently of the layout of the main document is difficult. This package provides a solution by producing an auxiliary TeX file to be typeset on its own and the result is automatically included at the next run. The markup necessary for the frontispiece is written in the main document in a <code>frontespizio</code> environment. Documentation is mainly in Italian, as the style is probably apt only to theses in Italy.
documentation	(Italian) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/frontespizio/frontespizio.pdf
– local file	<code>./4220844020-frontespizio.pdf</code>

2416 functional – An intuitive functional programming interface for LaTeX2Web page on CTAN <https://ctan.org/pkg/functional>

name	functional
caption	An intuitive functional programming interface for LaTeX2
author	Lyu, Jianrui
copyright	Jianrui Lyu (2022-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2024C (2024-12-18)
last changes	2024-12-18
year	2024
description	(no language specified) This package provides an intuitive functional programming interface for LaTeX2, which is an alternative choice to expl3 or LuaTeX, if you want to do programming in LaTeX. Although there are functions in LaTeX3 programming layer (expl3), the evaluation of them is from outside to inside. With this package, the evaluation of functions is from inside to outside, which is the same as other programming languages such as Lua. In this way, it is rather easy to debug code too.

2420 *fundus-la* – Support for the la and lla fonts in LaTeX documents

Web page on CTAN <https://ctan.org/pkg/fundus-la>

name	<i>fundus-la</i>
caption	Support for the la and lla fonts in LaTeX documents
author	Neugebauer, Gerd
copyright	Gerd Neugebauer (1996)
license	other-free = Free license not otherwise listed (free)
version	1.2

description	(no language specified) The package offers support for the la and lla children’s handwriting fonts, in LaTeX documents. The package is part of the fundus bundle.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/fundus/la/la.pdf
– local file	<code>./2887308813-la.pdf</code>
on CTAN	https://ctan.org/tex-archive/macros/latex/contrib/fundus/la
on MikTeX	<code>fundus-la</code>
keyword	<code>font-supp</code> (metrics, macro incantations and other font support)
language(s)	no language specified
year	1996
last access	2026-04-14

2421 *fundus-outline* – LaTeX support for CM outline fonts

Web page on CTAN <https://ctan.org/pkg/fundus-outline>

name	<code>fundus-outline</code>
caption	LaTeX support for CM outline fonts
author	Neugebauer, Gerd
copyright	Gerd Neugebauer (1997)
license	other-free = Free license not otherwise listed (free)
version	1.1
description	(no language specified) The package offers support for use of the CM outline fonts in LaTeX documents, using a technique rather different from that of LaTeX’s own font selection system. The package is part of the fundus bundle.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/fundus/outline/outline.pdf
– local file	<code>./3962559270-outline.pdf</code>
on CTAN	https://ctan.org/tex-archive/macros/latex/contrib/fundus/outline
on MikTeX	<code>fundus-outline</code>

2422 *fundus-pvscript* – Support for Vanroose handwriting font

keyword	font-supp (metrics, macro incantations and other font support)
language(s)	no language specified
year	1997
last access	2026-04-14

2422 *fundus-pvscript* – Support for Vanroose handwriting font

Web page on CTAN <https://ctan.org/pkg/fundus-pvscript>

name	fundus-pvscript
caption	Support for Vanroose handwriting font
author	Neugebauer, Gerd
copyright	Gerd Neugebauer (1996)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.2
description	(no language specified) The package supports use, in LaTeX, of the Metafont emulation of Peter Vanroose's handwriting . The package is distributed as part of the fundus bundle.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/fundus/pvscript/pvscript.pdf

2440 `gamebooklib` – Macros for setting numbered entries in shuffled order

Web page on CTAN <https://ctan.org/pkg/gamebooklib>

name	Gamebooklib
caption	Macros for setting numbered entries in shuffled order
author	Lee, Robert J
copyright	Robert J Lee (2021-2023)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.4 (2023-07-28)
last changes	2023-07-28
year	2023
description	(no language specified) This package provides macros and environments to allow the user to typeset a series of cross-referenced, numbered "entries", shuffled into random order, to produce an interactive novel or "gamebook". This allows entries to be written in natural order and shuffled automatically into a repeatable non-linear order. Limited support is provided for footnotes to appear at the natural position: the end of each entry, or the end of each page, whichever is closest to the footnote mark. This is unrelated to the <code>gamebook</code> package which is more concerned with the formatting of entries rather than their order. The two packages can be used together or separately.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/gamebooklib/gamebooklib.pdf

description	(no language specified) Garamond Libre is a free and open-source old-style font family. It is a "true Garamond," i.e., it is based off the designs of 16th-century French engraver Claude Garamond (also spelled Garamont). The Roman design is Garamond's; the italics are from a design by Robert Granjon. The upright Greek font is after a design by Firmin Didot; the "italic" Greek font is after a design by Alexander Wilson. The font family includes support for Latin, Greek (monotonic and polytonic) and Cyrillic scripts, as well as small capitals, old-style figures, superior and inferior figures, historical ligatures, Byzantine musical symbols, the IPA and swash capitals.

2450 *gates* – Support for writing modular and customisable code

Web page on CTAN <https://ctan.org/pkg/gates>

name	<code>gates</code>
caption	Support for writing modular and customisable code
author	Robbers, Yuri
author	Isambert, Paul
license	lppl = The LaTeX Project Public License (free)
version	0.2
description	(no language specified) The package provides the means of writing code in a modular fashion: big macros or functions are divided into small chunks (called gates) with names, which can be externally controlled (e.g. they can be disabled, subjected to conditionals, loops...) and/or augmented with new chunks. Thus complex code may easily be customised without having to rewrite it, or even understand its implementation: the behavior of existing gates can be modified, and new ones can be added, without endangering the whole design. This allows code to be hacked in ways the original authors might have never envisioned. The gates package is implemented independently for both TeX and Lua. The TeX implementation, running in any current environment, requires the texapi package, whereas the Lua version can be run with any Lua interpreter, not just LuaTeX.

2451 *gatherenum* – A crossover of *align** and *enumerate*

Web page on CTAN <https://ctan.org/pkg/gatherenum>

name	gatherenum
caption	A crossover of <i>align*</i> and <i>enumerate</i>
author	Rivaud, Julien
copyright	Julien RIVAUD (2016-2019)
license	gpl3+ = GNU General Public License, version 3 or newer (free)
version	1.8 (2019-09-29)
last changes	2019-09-29
year	2019
description	(no language specified) This package (ab)uses the inline enumeration capabilities of enumitem to add a "displayed" enumeration mode, triggered by adding 'gathered' to the key-value option list of the enumerate environment. The end result is similar to a regular enumerate environment wrapped in a multicols environment, with the following advantages: • Gathered enumerate can pack items depending on their actual width rather than a fixed, constant number per line. • Gathered enumeration fills items in a line-major order (instead of column-major order), which my students found less confusing. YMMV. The package depends on enumitem , expl3 , and xparse ,

2463 *gellmu* – LaTeX-like markup for writing XML documents

Web page on CTAN <https://ctan.org/pkg/gellmu>

name	GELLMU
caption	LaTeX-like markup for writing XML documents
author	Hammond, William F.
copyright	William F. Hammond (2001-2006)
license	gpl = GNU General Public License (free)
version	0.8.4.1
description	(no language specified) GELLMU is an acronym for "Generalized Extensible LaTeX-Like Markup". With GELLMU one may use LaTeX-like markup to write consciously for SGML document types such as HTML, DocBook, TEI, or GELLMU's own LaTeX-like document type 'article'. The package provides a syntactic translator, which is the project layer for all document types. The article document type is very much like LaTeX with a tightly enforced syntax and vocabulary. For article, the package provides translators to classic HTML, regular LaTeX and the XML form of HTML extended by MathML (XHTML). The latter form provides optimal online content that is 'accessible' and in the author's opinion superior to PDF for web presentation.

2469 *genealogytree* – Pedigree and genealogical tree diagrams

Web page on CTAN	https://ctan.org/pkg/genealogytree
name	<code>genealogytree</code>
caption	Pedigree and genealogical tree diagrams
author	Sturm, Thomas F.
copyright	Prof. Dr. Dr. Thomas F. Sturm (2013-2023)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.3.0 (2023-03-09)
last changes	2023-03-09
year	2023

description	(no language specified) Pedigree and genealogical tree diagrams are proven tools to visualize genetic and relational connections between individuals. The naming (“tree”) derives from historical family diagrams. However, even the smallest family entity consisting of two parents and several children is hardly a ‘mathematical’ tree — it is a more general graph. The package provides a set of tools to typeset genealogical trees (i.e., to typeset a set of special graphs for the description of family-like structures). The package uses an autolayout algorithm which can be customized, e.g., to prioritize certain paths.

caption A complete Greek font with Latin and Cyrillic, too

author SIL International

license ofl = The SIL Open Font License (free)

version 6.200

description (no language specified) This is a redistribution of the original Gentium release from SIL, not altered in any way.

Gentium is a typeface family designed to enable the diverse ethnic groups around the world who use the Latin, Cyrillic and Greek scripts to produce readable, high-quality publications.

The Gentium family includes a complete Greek font, supporting both monotonic and polytonic forms. While some Greek characters do closely resemble Latin ones, it is a separate design that embraces the robust, distinctive character of the Greek script, but does so within the design context of the whole typeface. As a result, the two scripts can be successfully mixed in a paragraph or page of text.

license	ofl = The SIL Open Font License (free)
version	1.102
description	(no language specified) Gentium is a typeface family designed to enable the diverse ethnic groups around the world who use the Latin, Cyrillic and Greek scripts to produce readable, high-quality publications. It supports a wide range of Latin- and Cyrillic-based alphabets. The package consists of: • The original (unaltered) GentiumPlus, GentiumBook, and other Gentium-family fonts in TrueType format, as developed by SIL and released under the OFL (see OFL.txt and OFL-FAQ.txt);

- Converted fonts in PostScript Type 1 format, released under the same terms. These incorporate the name "Gentium" by permission of SIL given to the TeX Users Group;
- LaTeX and other supporting files;
- TeX-related documentation, and the SIL documentation and other files.

version	(2022-09-10)
last changes	2022-09-10
year	2022
description	(no language specified) This bundle provides a LaTeX package for generating Japanese-style crop marks (called ‘tombow’ in Japanese) for practical use in self-publishing.

The bundle contains the following packages:

- `gentombow.sty` : Generate crop marks (called ‘tombow’ in Japanese) for practical use in self-publishing. It provides the core ‘tombow’ feature if not available.
- `pxgentombow.sty` : Superseded by `gentombow.sty` ; kept for compatibility only.
- `bounddvi.sty` : Set papersize special to DVI file. Can be used on LaTeX/ **pLaTeX** / **upLaTeX** (with DVI output mode) with **dvips** or **dvipdfmx** drivers.

2482 *geometry* – Flexible and complete interface to document dimensions

Web page on CTAN <https://ctan.org/pkg/geometry>

name	<code>geometry</code>
caption	Flexible and complete interface to document dimensions
author	The LaTeX Project Team
author	Umeki, Hideo
author	Carlisle, David
copyright	Hideo Umeki, David Carlisle (2018-2026)

copyright	Hideo Umeki (1996-2010)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	6.0 (2026-03-07)
last changes	2026-03-07
year	2026
description	(no language specified) The package provides an easy and flexible user interface to customize page layout, implementing auto-centering and auto-balancing mechanisms so that the users have only to give the least description for the page layout. For example, if you want to set each margin 2cm without header space, what you need is just <code>\usepackage[margin=2cm,nohead]{geometry}</code>. The package knows about all the standard paper sizes, so that the user need not know what the nominal ‘real’ dimensions of the paper are, just its standard name (such as <code>a4</code>, <code>letter</code>, etc.). An important feature is the package’s ability to communicate the paper size it’s set up to the output (whether via DVI <code>\specials</code> or via direct interaction with pdf(La)TeX).

2494 *getargs* – A flexible list-parsing macro with configurable parsing character

Web page on CTAN <https://ctan.org/pkg/getargs>

name	<code>getargs</code>
caption	A flexible list-parsing macro with configurable parsing character
author	Segletes, Steven B.
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.01 (2016-05-20)
last changes	2016-05-20
year	2016
description	(no language specified) This short package provides a flexible list-parsing macro with the ability to configure the parsing character, as well as the macro names in which the parsed list items are placed. The name of the parsing macro is <code>\getargs</code>. It is a significant improvement over similarly named macros in the same author's <code>stringstrings</code> and <code>readarray</code> packages. It is the author's intent to eventually have the parsers of those other packages point to this package, to achieve a measure of uniformity. Note: This package has been withdrawn by its author in July 2016. It will be replaced by the forthcoming <code>listofitems</code> package.

version	1.11 (2019-03-25)
last changes	2019-03-25
year	2019
description	(no language specified) The package provides a simple interface to OpenStreetMap, and to Google Maps "map images". In the simplest case, it is sufficient to specify the address you need (if you don't, the package will use its own default). The package loads the map image using an external lua script (invoked via <code>\write 18</code>: LaTeX must be running with <code>\write 18</code> enabled). The ("external") lua script may be used from the command line; a bash version is provided.

2503 *gfs* – The GFS font collection

Web page on CTAN <https://ctan.org/pkg/gfs>

name	GFS
caption	The GFS font collection
author	Tsolomitis, Antonis
author	The Greek Font Society
author	Matthiopoulos, George D.
license	other-free = Free license not otherwise listed (free)
description	(no language specified) The Greek Font Society has made a large number of fonts publicly available, and this collection reflects those that have been adapted, by Tsolomitis and others, for use with LaTeX. The collection comprises: • GFS Artemisia , a relatively modern general-purpose font; • GFS Baskerville , based on Baskerville’s classic font; • GFS Bodoni , based on Bodoni’s 19th century work; • GFS Didot , based on Didot’s 1805 font; • GFS Neo-Hellenic , a version of a font developed in Britain in the early 20th century; and

- **GFS Porson** , developed from the early 19th century font based on Porson's writing.

The fonts, except Baskerville and Porson, support the Latin alphabet as well as the Greek alphabet. Neo Hellenic has been matched to the existing **CM bright** set of mathematics fonts.

Web page on CTAN <https://ctan.org/pkg/gfsneohellenicmath>

name GFSNeohellenicMath

caption A math font in the Neo-Hellenic style

author Tsolomitis, Antonis

license ofl = The SIL Open Font License (free)

version 1.02 (2022-07-18)

last changes 2022-07-18

year 2022

description (no language specified) The GFSNeohellenic font, a historic font first designed by Victor Scholderer, and digitized by George Matthiopoulos of the Greek Font Society (GFS), now has native support for Mathematics.

The project was commissioned to GFS by the Department of Mathematics of the University of the Aegean, Samos, Greece. The Math Table was constructed by the Mathematics Professor A. Tsolomitis. A useful application is in beamer documents since this is a Sans Math font.

The GFSNeohellenic fontfamily supports many languages (including Greek), and it is distributed (both text and math) under the OFL license.

Web page on CTAN <https://ctan.org/pkg/gitfile-info>

name	gitfile-info
caption	Get git metadata for a specific file
author	Hilbig, André
copyright	André Hilbig (2016-2019)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.5 (2019-08-21)
last changes	2019-08-21
year	2019
description	(no language specified) If you are using git to control versions of LaTeX-files, you may want to show yourself or other users or devs the current version of the file, information about the author and last edited date. All packages for git known make that kind of information available for the whole repository. But sometimes you have a lot of files within the same repository in different versions, from different authors etc. Perhaps you also split up a big project in small files and want to show within the document who had edited what. This package gives you the opportunity to do so.

2526 gitinfo-lua – Display git project information in your LaTeX projects

Web page on CTAN <https://ctan.org/pkg/gitinfo-lua>

name	gitinfo-lua
caption	Display git project information in your LaTeX projects
author	Nijenhuis, Erik
copyright	E. Nijenhuis (2023-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.2.0
description	(no language specified) This project aims to display git project information in PDF documents. It is mostly written in Lua for executing the <code>git</code> commands, thereby making this package only applicable for LuaLaTeX with shell escape enabled. If LuaLaTeX isn't working for you, you could try gitinfo2 instead. For LaTeX, a set of standard macros is provided for displaying basic information or setting the project directory, and a set of advanced macros for formatting commits and tags.

2533 *gladtex* – LaTeX equations in HTML

Web page on CTAN <https://ctan.org/pkg/gladtex>

name	GladTeX
caption	LaTeX equations in HTML
author	Humenda, Sebastian
author	Gulbrandsen, Martin G.
copyright	Sebastian Humenda (2013-2016)
copyright	Jonathan Daugherty (2011-2013)
copyright	Martin G. Gulbrandsen (1999-2010)
license	lgpl3 = GNU Lesser General Public License 3 (free)
version	3.0.0
description	(no language specified) GladTeX is a utility that enables LaTeX equations within HTML code. You write HTML code as usual, but in addition you can include equations within the special tags <code><EQ>...</EQ></code>, as if within <code>\$\$...\$\$</code> in LaTeX. Then you run <code>gladtex</code>, which replaces the equations by images. Features include image alignment (baseline of equations agree with baseline of text), GIF and PNG support, transparent backgrounds and antialiasing. Additionally, GladTeX can aid the creation of accessible documents for the blind by providing the LaTeX equation in the <code>alt</code> attribute of an image. It also comes with a library which allows embedding GladTeX into other applications.

2539 *glosmathtools* – Mathematical nomenclature tools based on the glossaries package

Web page on CTAN <https://ctan.org/pkg/glosmathtools>

name	glosmathtools
caption	Mathematical nomenclature tools based on the glossaries package
author	Gagnon, Francis
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0.0 (2020-03-26)
last changes	2020-03-26
year	2020
description	(no language specified) This package can be used to generate a mathematical nomenclature (also called "list of symbols" or "notation"). It is based on the glossaries package.

Its main features are:

- symbol categories (e.g.: latin, greek)
- automatic but customizable symbol sorting
- easy subscript management
- easy accentuation management
- abbreviation support (with first use definition)
- bilingual nomenclatures (for bilingual documents)
- bilingual abbreviations

The documentation is based on the [ulthese](#) class.

The package itself depends on [glossaries](#) , [amsmath](#) , [amsfonts](#) , and [etoolbox](#) .

2542 *glossaries* – Create glossaries and lists of acronyms

Web page on CTAN <https://ctan.org/pkg/glossaries>

name	<code>glossaries</code>
caption	Create glossaries and lists of acronyms
author	Talbot, Nicola
copyright	Nicola Talbot (2007-2026)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	5.1 (2026-04-21)
last changes	2026-04-21
year	2026
description	(no language specified) The <code>glossaries</code> package supports acronyms and multiple glossaries, and has provision for operation in several languages (using the facilities of either <code>babel</code> or <code>polyglossia</code>). New entries are defined to have a name and description (and optionally an associated symbol). Support for multiple languages is offered, and plural forms of terms may be specified. An additional package, <code>glossaries-accsupp</code>, can make use of the <code>accsupp</code> package mechanisms for accessibility support for PDF files containing glossaries. The user may define new glossary styles, and preambles and postambles can be specified. There is provision for loading a database of terms, but only terms used in the text will be added to the relevant glossary. The package uses an indexing program to provide the actual glossary; either <code>makeindex</code> or <code>xindy</code> may serve this purpose, and a Perl script is provided to serve as interface. This package requires the <code>mfistuc</code> package. The package supersedes the author's <code>glossary</code> package (which is now obsolete).

2564 *glossary* – Create a glossary

Web page on CTAN	https://ctan.org/pkg/glossary
name	glossary
caption	Create a glossary
author	Talbot, Nicola
copyright	Nicola Talbot (2006)
license	lppl = The LaTeX Project Public License (free)
version	2.4

description	(no language specified) The package supports generation of a glossary with <code>makeindex</code>. It has a certain amount of flexibility allowing the user to customize the format of the glossary and define new glossary-style objects so that you can have more than one type of glossary in your document. The package is no longer supported; the author urges users to switch to use of its replacement, the <code>glossaries</code> package. Migration support is available, within the newer package.

author	Murzynowski, Grzegorz
copyright	Grzegorz Murzynowski (2006, 2007, 2008, 2009, 2010)
license	lppl = The LaTeX Project Public License (free)
version	0.993

description	(no language specified) A LaTeX package and an example class for documenting (La)TeX packages, document classes, .dtx etc., providing hyperlinks. The package is believed to be compatible with doc and permits minimal markup of code (the macrocode environment is no longer necessary). The package provides automatic detection of definitions (detecting such things as <code>\def</code>, <code>\newcommand</code>, <code>\DeclareOption</code> etc.). The package needs hyperref and the author's three 'basic' packages: gmutils, gmverb and gmiflink. As a bonus (and as an example of doc compatibility) driver files are provided that may be used to typeset the LaTeX Base.
documentation	(no language specified) <i>README</i> : https://ctan.org/tex-archive/macros/latex/contrib/gmdoc/README

2573 gmverb – A variant of LaTeX `\verb`, `verbatim` and `shortverb`Web page on CTAN <https://ctan.org/pkg/gmverb>

name	gmverb
caption	A variant of LaTeX <code>\verb</code> , <code>verbatim</code> and <code>shortverb</code>
author	Murzynowski, Grzegorz
license	lppl = The LaTeX Project Public License (free)
version	0.98
description	(no language specified) A redefinition of <code>\verb</code> and <code>verbatim</code> so that long lines are breakable before <code>\</code> and after <code>{</code> with <code>%</code> as ‘hyphen’. Allows you to define your own <code>verbatim</code>-like environments (subject to a size limit) and allows you to declare any single character as a shorthand as in the <code>\MakeShortVerb</code> command of the <code>shortverb</code> package of the LaTeX distribution. The package depends on the gmutils package.

2577 `gnuplottex` – Embed Gnuplot commands in LaTeX documents

Web page on CTAN <https://ctan.org/pkg/gnuplottex>

name	gnuplottex
caption	Embed Gnuplot commands in LaTeX documents
author	Kotthoff, Lars
copyright	Lars Kotthoff (2006-2019)
license	gpl2 = GNU General Public License, version 2 (free)
version	0.9.5
description	(no language specified) This package allows you to include Gnuplot graphs in your LaTeX documents. The gnuplot code is extracted from the document and written to <code>.gnuplot</code> files. Then, if shell escape is used, the graph files are automatically processed to graphics or LaTeX code files which will then be included in the document. If shell escape isn't used, the user will have to manually convert the files by running gnuplot on the extracted <code>.gnuplot</code> files.

year	1992
last access	2025-02-07

2580 *gobble* – More gobble macros for PlainTeX and LaTeX

Web page on CTAN	https://ctan.org/pkg/gobble
name	<code>gobble</code>
caption	More gobble macros for PlainTeX and LaTeX
author	Scharrer, Martin
copyright	Martin Scharrer (2012-2019)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.2 (2019-01-04)
last changes	2019-01-04
year	2019
description	(no language specified) The LaTeX package <code>gobble</code> includes several gobble macros not included in the LaTeX kernel. These macros remove a number of arguments after them, a feature regularly used inside other macros. This includes gobble macros for optional arguments. The LaTeX package <code>gobble-user</code> provides these macros at the user level, i.e. using names without <code>@</code> so that these can be used without <code>\makeatletter</code> and <code>\makeatother</code>. The same macros are provided inside <code>.tex</code> files for use with plain-TeX or other TeX formats. However, the gobble macros for optional macros require <code>\@ifnextchar</code> to be defined.

2599 *graphbox* – Extend *graphicx* to improve placement of graphics

Web page on CTAN <https://ctan.org/pkg/graphbox>

name	graphbox
caption	Extend <i>graphicx</i> to improve placement of graphics
author	Beisert, Niklas
copyright	Niklas Beisert (2013-2018)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.1 (2018-01-17)
last changes	2018-01-17
year	2018
description	(no language specified) Graphbox is an extension of the standard graphicx LaTeX2e package to allow the placement of graphics relative to the "current position" using additional optional arguments of <code>\includegraphics</code>. For example, changing the vertical alignment is convenient for using graphics as elements of (mathematical) formulae. Options for shifting, smashing and hiding the graphics may be useful in support, for example, of the beamer framework.

2602 *graphfig* – Simpler graphic, subfigure and float

Web page on CTAN <https://ctan.org/pkg/graphfig>

name	graphfig
caption	Simpler graphic, subfigure and float
author	Bosisio, Francesco
copyright	Francesco Bosisio (1997-2010)
license	lpl = The LaTeX Project Public License (free)
version	2.2
description	(no language specified) This package combines the tools of the <code>graphic</code>, <code>subfigure</code> and <code>float</code> packages in a way that makes their use simpler and more robust. The <code>Figure</code> environment (capitalized) differs from the standard LaTeX figure environment by the addition of a mandatory argument to specify the caption and an optional argument to be used as a label. These ensure that the <code>\label</code> command appears after the <code>\caption</code> command to avoid the common labelling error. The commands <code>\graphfig</code> and <code>\graphfig*</code> have the additional advantage that the image will be automatically centered horizontally. The package is part of the bosisio bundle.

Web page on CTAN <https://ctan.org/pkg/graphics>

name *graphics*
caption Standard LaTeX *graphics*
author Carlisle, David
author The LaTeX Project Team
copyright David Carlisle, Sebastian Rahtz (1994)

copyright	David Carlisle, LaTeX3 Project (1995-2022)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.4g (2024-08-06)
last changes	2024-08-06
year	2024
description	(no language specified) The package was designed to accommodate all needs for inclusion of graphics in LaTeX documents, replacing many earlier packages used in LaTeX 2.09. The package aims to give a consistent interface to including the file types that are understood in your output, by use of ‘printer drivers’ (now known, simply, as ‘drivers’). The distribution of the package contains several drivers, but others (for example, pdfTeX) are distributed separately. The package also offers several means of manipulating graphics in the course of inserting them into a document (for example, rotation and scaling). For extended documentation see epslatex . The package is part of the graphics bundle , which is one of the collections in the LaTeX ‘required’ set of packages.

2608 graphicscache – Cache includegraphics calls

Web page on CTAN <https://ctan.org/pkg/graphicscache>

name	graphicscache
caption	Cache includegraphics calls
author	Schwarz, Max
copyright	Max Schwarz (2018-2021)
license	bsd3 = 3-clause BSD License (free)
version	0.4 (2022-12-20)
last changes	2022-12-20
year	2022
description	(no language specified) This LaTeX package provides caching of <code>\includegraphics</code> calls, with several useful effects: • Recompilations are much faster (10x speedup observed). • Images can be postprocessed with <code>ghostscript</code> before inclusion, thus:

- Automatic downscaling to specified DPI
- Automatic JPEG compression with configurable quality
- Much smaller files (e.g. 10MB instead of 150MB)!

Note: Due to the one-by-one invocation of `pdflatex` and `ghostscript` for each graphics element, the first compilation is typically slower than usual.

Note: `graphicscache` needs the `\write18` call (also called shell escape). This is a security risk if you have untrusted TeX sources.

`graphicscache` supports pdfLaTeX and LuaLaTeX; XeLaTeX is not supported.

documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/graphicscache/README.md

2610 *graphicx-psmin* – Reduce size of PostScript files by not repeating imagesWeb page on CTAN <https://ctan.org/pkg/graphicx-psmin>

name	graphicx-psmin
caption	Reduce size of PostScript files by not repeating images
author	Adriaens, Hendri
copyright	Hendri Adriaens (2004-2020)
license	lppl = The LaTeX Project Public License (free)
version	1.2
description	(no language specified) The package is an extension of the standard latex-graphics bundle and provides a way to include repeated PostScript graphics (ps, eps) only once in a PostScript document. This leads to smaller PostScript documents when having, for instance, a logo on every page. The package only works when post-processed with dvips, which should be version 5.95b or later. The difference for a resulting distilled PDF file is minimal (as Ghostscript and Adobe Distiller only include a single copy of each graphics file, anyway).
documentation	(no language specified) <i>Package documentation</i>: https://ctan.org/tex-archive/macros/latex/contrib/graphicx-psmin/graphicx-psmin.pdf

2620 grayhints – Produce ‘gray hints’ to a variable text field

Web page on CTAN <https://ctan.org/pkg/grayhints>

name	grayhints
caption	Produce ‘gray hints’ to a variable text field
author	Story, Donald P.
license	lppl1.2 = The LaTeX Project Public License 1.2 (free)
version	(2018-11-01)
last changes	2018-11-01
year	2018
description	(no language specified) The package provides JavaScript code snippets to create ‘gray hints’. Gray hints, as the author terms them, are text that appears initially in a text field that gives a short hint as to what the contents of the text field should be. For example, a text field might contain the hint ‘First Name’, or a date field might read ‘yyyy/mm/dd’. As soon as the field comes into focus, the hint disappears. It reappears when the field is blurred and the user did not enter any text into the field. The package works for dvips/Distiller, pdfLaTeX, LuaLaTeX, and XeLaTeX.
documentation	(no language specified) <i>Package documentation</i>: https://ctan.org/tex-archive/macros/latex/contrib/grayhints/doc/grayhints_man.pdf

Web page on CTAN <https://ctan.org/pkg/greektonoi>

name	<code>greektonoi</code>
caption	Facilitates writing/editing of multiaccented greek
author	Cornaros, Charalampos
license	lgpl3 = GNU Lesser General Public License 3 (free)
version	(2016-01-01)
last changes	2016-01-01
year	2016
description	(no language specified) The <code>greektonoi</code> mapping extends the <code>betababel</code> package or the <code>babel</code> <code>polutonikogreek</code> option to provide a simple way to insert ancient Greek texts with diacritical characters into your document using a similar method to the commonly used Beta Code transliteration, but with much more freedom. It is designed especially for the XeTeX engine and it could also be used for fast and easy modification of monotonic greek texts to polytonic. The output text is natively encoded in Unicode, so it can be reused in any possible way. The <code>greektonoi</code> package provides, in addition to inserting greek accents and breathings, many other symbols used in greek numbers and arithmetic or in the greek archaic period. It could be used with <code>greektonoi</code> mapping or independently.

2639 grid – Grid typesetting in LaTeX

Web page on CTAN <https://ctan.org/pkg/grid>

name	grid
caption	Grid typesetting in LaTeX
author	River Valley Technologies
copyright	River Valley Technologies (2009)
license	lppl = The LaTeX Project Public License (free)
version	1.0
description	(no language specified) The package helps to enables grid typesetting in double column documents. Grid typesetting (vertical aligning of lines of text in adjacent columns) is a difficult task in LaTeX, and the present package is no more than an attempt to help users to achieve it in a limited way. An example document, <code>grid.tex</code>, is provided with simple instructions to typeset it using the package. The package needs a lot more work: this is only a beginning...

2642 *gridset* – Grid, a.k.a. in-register, setting

Web page on CTAN <https://ctan.org/pkg/gridset>

name	gridset
caption	Grid, a.k.a. in-register, setting
author	Kohm, Markus
copyright	Markus Kohm (2008-2020)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.4 (2024-08-17)
last changes	2024-08-17
year	2024
description	(no language specified) Grid setting — also known as strict in-register setting — is something, that should be done for a lot of documents but is not easy using LaTeX. The package helps to get the information needed for grid setting. It does not implement auto grid setting, but there is a command <code>\vskipnextgrid</code> , that moves to the next grid position. This may be enough under some circumstances, but in other circumstances it may fail. Thus <i>gridset</i> is only one more step for grid setting, not a complete solution.

2643 gridslides – Free form slides with blocks placed on a grid

Web page on CTAN <https://ctan.org/pkg/gridslides>

name gridslides
caption Free form slides with blocks placed on a grid
author Mendler, Daniel
copyright Daniel Mendler (2017)
license gpl2 = GNU General Public License, version 2 (free)
license lpl1.3 = The LaTeX Project Public License 1.3 (free)
version 0.1.1 (2017-11-28)
last changes 2017-11-28
year 2017
description (no language specified) This package allows creating free form slides with blocks placed on a grid. The blocks can be filled with text, equations, figures etc. The resulting slides are similar to the ones produced with [LaTeX beamer](#) , but more flexible.
Sequential unconvener of elements is supported. A compiler script is provided which compiles each slide separately, this way avoiding long compile times.

2653 *gtex-letter* – A Gnome assistant to ease the writing of LaTeX letters

Web page on CTAN <https://ctan.org/pkg/gtex-letter>

name	gtex-letter
caption	A Gnome assistant to ease the writing of LaTeX letters
author	Folini, Christian
license	gpl = GNU General Public License (free)
description	(no language specified) A good looking interface, based on the gnome-desktop. Serial letters are supported. Multiple letter headers can be accessed from within the application. Standard openings and default closings can be configured. These openings can be configured to adopt to the sex of the addressee automatically. You can choose from three different user interfaces. Novice is very easy for the beginner, intermediate is the standard way, expert is straight forward, all on one big page. The application can swallow text you pipe into it, being it the address or the text of the letter. A special non-interactive mode lets you produce standard-letters in an extremely efficient way. gtex-letter connects to the gnome-address-book from the gnome-pim package. gtex-letter is implemented in python and based on gnome.

2655 *gtrcrd* – Add chords to lyricsWeb page on CTAN <https://ctan.org/pkg/gtrcrd>

name	<code>gtrcrd</code>
caption	Add chords to lyrics
author	Bresciani, Riccardo
copyright	Riccardo Bresciani (2012-2013)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.1 (2013-12-24)
last changes	2013-12-24
year	2013
description	(no language specified) The package provides the means to specify guitar chords to be played with each part of the lyrics of a song. The syntax of the macros reduces the chance of failing to provide a chord where one is needed, and the structure of the macros ensures that the chord specification appears immediately above the start of the lyric.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/gtrcrd/gtrcrd-doc.pdf

description	(no language specified) Si tu ne connais rien à LaTeX, si tu veux apprendre à rédiger des rapports élégants sous LaTeX, et si en plus tu es Français, je sais exactement ce que tu ressens: c'est extrêmement dur de commencer tout seul, en autodidacte. C'est pourquoi j'ai réuni toutes mes connaissances actuelles sur LaTeX dans ce guide. Il peut donc t'aider à apprendre les bases ou aller plus loin dans ton utilisation de LaTeX. Des exemples détaillés sont fournis tout le long du guide. If you want to start from scratch and learn how to type good-looking reports with LaTeX, and if you're French, then I know it can be really hard to do it by yourself. That's why I put all the knowledge I acquired into this guide. It can help a lot to learn the bases or to move forward and use LaTeX to type more handsome documents. Lots of examples are provided all along this guide.

version 0.7 (2016-08-16)

last changes 2016-08-16

year 2016

description (no language specified) This package provides two commands (`\chordscheme` and `\scales`).

With those commands it is possible to draw schematic diagrams of guitar chord tablatures and scale tablatures. Both commands know a range of options that allow wide customization of the output.

The package's drawing is done with the help of **TikZ**.

Web page on CTAN <https://ctan.org/pkg/gzt>

name	gzt
caption	Bundle of classes for “La Gazette des Mathématiciens”
author	Bitouzé, Denis
copyright	Denis Bitouzé (2014-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1.4 (2024-03-09)
last changes	2024-03-09
year	2024
description	(no language specified) This bundle provides two classes and BibLaTeX styles for the French journal “La Gazette des Mathématiciens” : • gzt for the complete issues of the journal, aimed at the Gazette’s team, • gztarticle , intended for authors who wish to publish an article in the Gazette. This class’s goals are to – faithfully reproduce the layout of the Gazette, thus enabling the authors to be able to work their document in actual conditions, and – provide a number of tools (commands and environments) to facilitate the drafting of documents, in particular those containing mathematical formulas.

2690 *hanging* – Hanging paragraphs

Web page on CTAN <https://ctan.org/pkg/hanging>

name	<code>hanging</code>
caption	Hanging paragraphs
author	Robertson, Will
author	Wilson, Peter R.
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.2b
description	(no language specified) The hanging package facilitates the typesetting of hanging paragraphs. The package also enables typesetting with hanging punctuation, by making punctuation characters active. This facility is best suppressed (it can interfere with other packages) — there are package options for suppressing each individual punctuation character. ‘Real’ attempts at hanging punctuation should nowadays use the microtype package, which takes advantage of the support offered in recent versions of pdfTeX.

2694 *har2nat* – Replace the harvard package with natbib

Web page on CTAN	https://ctan.org/pkg/har2nat
name	har2nat
caption	Replace the harvard package with natbib
author	Straathof, Bas
license	lppl = The LaTeX Project Public License (free)
version	1.0
description	(no language specified) This small package allows a LaTeX document containing the citation commands provided by the Harvard package to be compiled using the natbib package. Migration from harvard to natbib thus can be achieved simply by replacing <pre>\usepackage{harvard}</pre> with <pre>usepackage{natbib} usepackage{har2nat}</pre> It is important that har2nat be loaded after natbib, since it modifies natbib commands.

2697 hardwrap – Hard wrap text to a certain character lengthWeb page on CTAN <https://ctan.org/pkg/hardwrap>

name	hardwrap
caption	Hard wrap text to a certain character length
author	Robertson, Will
author	Godby, Kevin
copyright	Will Robertson, Kevin Godby (2010, 2011)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.2
description	(no language specified) The package facilitates wrapping text to a specific character width, breaking lines by words rather than, as done by TeX, by characters. The primary use for these facilities is to aid the generation of messages sent to the log file or console output to display messages to the user. Package authors may also find this useful when writing out arbitrary text to an external file.

2701 *harvard* – Harvard citation package for use with LaTeX 2e

Web page on CTAN <https://ctan.org/pkg/harvard>

name	harvard
caption	Harvard citation package for use with LaTeX 2e
author	Williams, Peter
author	Schnier, Thorsten
copyright	Peter Williams (1994)
license	lppl = The LaTeX Project Public License (free)
version	2.0.5
description	(no language specified) This is a re-implementation, for LaTeX 2e, of the original Harvard package. The bundle contains the LaTeX package, several BibTeX styles, and a ‘Perl package’ for use with LaTeX2HTML. Harvard is an author-year citation style (all but the first author are suppressed in second and subsequent citations of the same entry); the package defines several variant styles: • <code>apsr.bst</code> for the American Political Science Review; • <code>agsm.bst</code> for Australian Government publications; • <code>dcu.bst</code> from the Design Computing Unit of the University of Sydney;

- `kluwer.bst` which aims at the format preferred in Kluwer publications;
- `nederlands.bst` which deals with sorting Dutch names with prefixes (such as `van`) according to Dutch rules,
- together with several styles whose authors offer no description of their behaviour.

documentation	(no language specified) <i>Package Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/harvard/README

2702 *harvard-obsolete* – The Harvard bibliography style family

Web page on CTAN <https://ctan.org/pkg/harvard-obsolete>

name	<code>harvard-obsolete</code>
caption	The Harvard bibliography style family
author	Williams, Peter
license	<code>noinfo</code> = <code>noinfo</code>
version	(1993-11-25)
last changes	1993-11-25
year	1993

description	(no language specified) There are two primary forms of citation in the Harvard style, dependent upon whether the reference is used as a noun or parenthetically. The citations themselves are in author-date style, with authors after the first suppressed in repeat citations. The three original bibliography styles are agsm.bst (for Australian Government publications), dcu.bst (from the Design Computing Unit of the University of Sydney) and kluwer.bst (aiming at the format preferred in Kluwer publications). This package is no longer recommended for use: the harvard package for current LaTeX should be used instead.

2716 *hecthese* – A class for dissertations and theses at HEC Montréal

Web page on CTAN <https://ctan.org/pkg/hecthese>

name	hecthese
caption	A class for dissertations and theses at HEC Montréal
author	Hamel, Benoit
copyright	HEC Montreal (2017-2023)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	3.0 (2026-04-20)
last changes	2026-04-20
year	2026

description	(no language specified) This package provides the <code>hecthese</code> class, a class based on <code>memoir</code> and compatible with LaTeX. Using this class, postgraduate students at HEC Montréal will be able to write their dissertation or thesis while complying with all the presentation standards required by the University. This class is meant to be as flexible as possible; in particular, there are very few hardcoded features except those that take care of the document's layout. Dissertations and theses at HEC Montréal can be written on a per-chapter or per-article basis. Documents that are written on a per-article basis require a bibliography for each of the included articles and a general bibliography for the entire document. The <code>hecthese</code> class takes care of these requirements.

2717 *hellas* – Typeset bibliographies which include Greek

Web page on CTAN <https://ctan.org/pkg/hellas>

name	hellas
caption	Typeset bibliographies which include Greek
author	Syropoulos, Apostolos
license	other-free = Free license not otherwise listed (free)
version	(1989-08-23)
last changes	1989-08-23
year	1989
description	(no language specified) Hellas is a BibTeX style, based on the standard plain style, for typesetting databases that containing both Greek and non-Greek bibliographic records. For most bibliographic record types there is an equivalent record type whose name begins with the prefix <code>gr-</code> . These <code>gr-something</code> records may have fields <code>translator</code> and <code>original-title</code> in addition to the fields one might expect in a standard BibTeX record.
on CTAN	https://ctan.org/tex-archive/language/greek/BibTeX
keyword	<code>bibtex-sty</code> (<code>bibtex-sty(unknown)</code>)
keyword	<code>greek</code> (support for typesetting Greek)
language(s)	no language specified
last access	2025-02-07

2718 *helmholtz-ellis-ji-notation* – Beautiful in-line microtonal just intonation accidentals

Web page on CTAN <https://ctan.org/pkg/helmholtz-ellis-ji-notation>

name	helmholtz-ellis-ji-notation
caption	Beautiful in-line microtonal just intonation accidentals
author	Nicholson, Thomas
copyright	Thomas Nicholson (2020)
license	cc-by-4 = CC BY 4.0 (free)
version	1.1 (2020-05-19)
last changes	2020-05-19

year	2020
description	(no language specified) The Helmholtz-Ellis JI Pitch Notation (HEJI), devised in the early 2000s by Marc Sabat and Wolfgang von Schweinitz, explicitly notates the raising and lowering of the <i>untuned</i> diatonic Pythagorean notes by specific microtonal ratios defined for each prime. It provides visually distinctive "logos" distinguishing families of justly tuned intervals that relate to the harmonic series. These take the form of strings of additional accidental symbols based on historical precedents, extending the traditional sharps and flats. Since its 2020 update, HEJI ver. 2 ("HEJI2") provides unique microtonal symbols through the 47-limit. This package is a simple LaTeX implementation of HEJI2 that allows for in-line typesetting of microtonal accidentals for use within theoretical texts, program notes, symbol legends, etc. Documents must be compiled using XeLaTeX.

name	hep-paper
caption	Publications in High Energy Physics
author	Hajer, Jan
copyright	Jan Hajer (2019-2023)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.3 (2024-11-01)
last changes	2024-11-01
year	2024
description	(no language specified) This package aims to provide a single style file containing most configurations and macros necessary to write appealing publications in High Energy Physics. Instead of reinventing the wheel by introducing newly created macros, hep-paper preferably loads third party packages as long as they are light-weight enough. For usual publications it suffices to load the hep-paper package, without optional arguments, in addition to the article class.

2733 hepnames – Pre-defined high energy particle names

Web page on CTAN <https://ctan.org/pkg/hepnames>

name	hepnames
caption	Pre-defined high energy particle names
author	Buckley, Andy
license	lppl = The LaTeX Project Public License (free)
version	2.0
description	(no language specified) Hepnames provides a pair of LaTeX packages, heppennames and hepnicensames, providing a large set of pre-defined high energy physics particle names built with the hepparticles package. The packages are based on <code>pennames.sty</code> by Michel Goosens and Eric van Herwijnen. Heppennames re-implements the particle names in <code>pennames.sty</code>, with some additions and alterations and greater flexibility and robustness due to the <code>hepparticles</code> structures, which were written for this purpose. Hepnicensames provides the main non-resonant particle names from heppennames with more "friendly" names.

2734 hepparticles – Macros for typesetting high energy physics particle names

Web page on CTAN <https://ctan.org/pkg/hepparticles>

name	HEPparticles
caption	Macros for typesetting high energy physics particle names
author	Buckley, Andy
license	lppl = The LaTeX Project Public License (free)
version	2.0
description	(no language specified) HEPparticles is a set of macros for typesetting high energy particle names, to meet the following criteria: 1. The main particle name is a Roman or Greek symbol, to be typeset in upright font in normal contexts. 2. Additionally a superscript and/or subscript may follow the main symbol. 3. Particle resonances may also have a resonance specifier which is typeset in parentheses following the main symbol. In general the parentheses may also be followed by sub- and superscripts. 4. The particle names are expected to be used both in and out of mathematical contexts. 5. If the surrounding text is bold or italic then the particle name should adapt to that context as best as possible (this may not be possible for Greek symbols). A consequence of point 5 is that the well-known problems with boldness of particle names in section titles, headers and tables of contents automatically disappear if these macros are used.

2735 *hepthesis* – A class for academic reports, especially PhD theses

Web page on CTAN <https://ctan.org/pkg/hepthesis>

name	hepthesis
caption	A class for academic reports, especially PhD theses
author	Buckley, Andy
license	lppl = The LaTeX Project Public License (free)
version	1.5.2
description	(no language specified) Hepthesis is a LaTeX class for typesetting large academic reports, in particular PhD theses. It was originally developed for typesetting the author's high-energy physics PhD thesis and includes some features specifically tailored to such an application. In particular, hepthesis offers: • Attractive semantic environments for various rubric sections; • Extensive options for draft production, screen viewing and binding-ready output; • Helpful extensions of existing environments, including equation and tabular; and • Support for quotations at the start of the thesis and each chapter. The class is based on scrbook, from the KOMA-Script bundle.

description (no language specified) This class facilitates the preparation of Research and Innovation Action (RIA) and Innovation Action (IA) funding proposals for the European Commission's Horizon Europe program.

The class is a conversion of the official Part B template into LaTeX; it preserves the formatting and most of the instructions of the original version, and has the additional feature that tables (listing the participants, work packages, deliverables, etc.) are programmatically generated according to data supplied by the user.

2754 hhline – Better horizontal lines in tabulars and arrays

Web page on CTAN <https://ctan.org/pkg/hhline>

name	hhline
caption	Better horizontal lines in tabulars and arrays
author	Carlisle, David
copyright	The LaTeX3 Project et al. (1993-2023)
copyright	David Carlisle (1991-1994)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.04 (2020-01-04)
last changes	2020-01-04
year	2020

description	(no language specified) The command <code>\hhline</code> produces a line like <code>\hline</code> , or a double line like <code>\hline\hline</code> , except for its interaction with vertical lines. The command takes a preamble (rather like the preamble of a tabular environment), and this specifies whether there are to be one or two horizontal lines, and what happens when the horizontal line meets a vertical one. The package is part of the latex-tools bundle in the LaTeX required distribution.

2757 *hideproofs* – Defines an a starred proof environment that hides proofs in draft mode

Web page on CTAN <https://ctan.org/pkg/hideproofs>

name	hideproofs
caption	Defines an a starred proof environment that hides proofs in draft mode
author	Wintz, Paul
copyright	pwintz (2025)
license	lppl = The LaTeX Project Public License (free)
version	1.0
description	(no language specified) This package introduces an alternate proof environment, <code>proof*</code>, which conditionally hides or shows its contents based on the document mode (<code>draft</code>, <code>final</code>, or <code>default</code>). This is useful for omitting formal proofs from draft versions while retaining them in final documents. The motivation for this package is to reduce the clutter in large files by omitting long proofs, allowing authors to focus their attention on results or proofs that are currently works in progress.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/hideproofs/README.md

2758 hieroglf – The “poor man’s” Egyptian Hieroglyphic font

Web page on CTAN <https://ctan.org/pkg/hieroglf>

name	hieroglf
caption	The “poor man’s” Egyptian Hieroglyphic font
author	Wilson, Peter R.
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.5
description	(no language specified) The hieroglf bundle provides a Type 1 rendition of some of the ancient Egyptian hieroglyphs. Hieroglyphic writing was used between about 3000 BC and 400 AD. The bundle is based on Serge Rosmorduc’s comprehensive hieroglyph package, but only provides about one tenth of his 650-odd hieroglyphs. Sufficient glyphs are provided for writing a few names like Cleopatra or Ptolomey (together with cartouches) and some numbers, but the package is not for serious Egyptologists. The bundle is part of a set of archaic fonts , and requires use of the oands fonts from that set.
documentation	(no language specified) <i>Sample of hieroglyphic font</i> : https://ctan.org/tex-archive/fonts/archaic/hieroglf/trypmhg.pdf

2759 hieroglyph – Hieroglyph fonts and other support

Web page on CTAN <https://ctan.org/pkg/hieroglyph>

name	hieroglyph
caption	Hieroglyph fonts and other support
author	Rosmorduc, Serge
copyright	Serge Rosmorduc (1993, 1994, 2002)
license	gpl = GNU General Public License (free)
version	3.5
description	(no language specified) HieroTeX is a system for typesetting ancient Egyptian hieroglyphs. It contains a hieroglyphic font, a number of style files, and a helper program in C called <code>sesh</code> which allows one to type hieroglyphic texts using the ‘manuel de codage’, which is the current standard for encoding ancient Egyptian. The fonts in the base system are distributed as Metafont source, but Adobe type 1 versions are also provided.
documentation	(English) <i>Readme</i> : https://ctan.org/tex-archive/fonts/hieroglyph/README

2770 hitex – A TeX extension writing HINT output for on-screen reading

Web page on CTAN <https://ctan.org/pkg/hitex>

Alias	HINT
name	hitex
caption	A TeX extension writing HINT output for on-screen reading
author	Ruckert, Martin
copyright	Martin Ruckert (null)
license	x11 = X11 License (free)

description	(no language specified) An extension of TeX which generates HINT output. The HINT file format is an alternative to the DVI and PDF formats which was designed specifically for on-screen reading of documents. Especially on mobile devices, reading DVI or PDF documents can be cumbersome. Mobile devices are available in a large variety of sizes but typically are not large enough to display documents formatted for a4/letter-size paper. To compensate for the limitations of a small screen, users are used to alternating between landscape (few long lines) and portrait (more short lines) mode. The HINT format supports variable and varying screen sizes, leveraging the ability of TeX to format a document for nearly-arbitrary values of <code>\hsize</code> and <code>\vsize</code>.

version	2.0 (2025-04-07)
last changes	2025-04-07
year	2025
description	(no language specified) This package allows for typing in Hittite cuneiform in LaTeX documents, using relatively simple commands based on the Latin transcriptions of the various signs. It also includes some formatting commands designed to allow for easy formatting of heterographic compounds, as well as shorthands for symbols commonly used in transcriptions. The <code>UllikummiA.ttf</code>, <code>UllikummiB.ttf</code>, and <code>UllikummiC.ttf</code> files comprise the Ullikummi Hittite cuneiform fonts developed by Dr Sylvie Vanséveren, distributed with written permission from Dr Vanséveren, available on Hethitologie Portal Mainz at https://www.hethport.uni-wuerzburg.de/cuneifont/.

2785 hobsub – Construct package bundles

Web page on CTAN <https://ctan.org/pkg/hobsub>

name	hobsub
caption	Construct package bundles
author	Oberdiek, Heiko
copyright	Oberdiek Package Support Group (2019)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	(2019-11-14)
last changes	2019-11-14
year	2019
description	(no language specified) Heiko Oberdiek's <code>hobsub</code> package (and <code>hobsub-hyperref</code> and <code>hobsub-generic</code> packages) defined a mechanism for concatenating multiple files into a single file for faster loading. The disadvantage is that it introduces hard dependencies between the source files that are included and complicates distribution and updates. It was principally used with <code>hyperref</code> but is not currently used in any standard packages in TeX Live. The packages are still distributed as simple stubs that reference the included packages via <code>\RequirePackage</code> rather than copying their source. The documented source of the original packages is available at github , but is not distributed to CTAN.

2790 *homework* – A LaTeX class for writing your homework

Web page on CTAN <https://ctan.org/pkg/homework>

name	homework
caption	A LaTeX class for writing your homework
author	XU, Jinwen
copyright	Jinwen XU (2023-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	(2024-09-30)
last changes	2024-09-30
year	2024
description	(no language specified) The current document class is for writing homework. It has the following features. • Simple and clear interface. • Built-in support for many theorem-type environments, already configured and ready to use. • Multilingual support. • Page numbers are of the form "Page [current] of [total]", which can help you ensure that there are no missing pages when you print your homework for submission. • Support writing problem statements and solutions (or proofs) in different colors. • Every statement and solution has its own QED symbol, in hollow or solid shape, respectively. • You can mark the unfinished parts, and a report shall be generated at the end of your document for reminding.

2791 *hook-pre-commit-pkg* – Pre-commit git hook for LaTeX package developpers

Web page on CTAN <https://ctan.org/pkg/hook-pre-commit-pkg>

name	hook-pre-commit-pkg
caption	Pre-commit git hook for LaTeX package developpers
author	Rouquette, Maïeul
copyright	Maïeul Rouquette (2014-2016)
license	gpl3 = GNU General Public License, version 3 (free)
version	1.1.2
description	(no language specified) This package provides a pre-commit git hook to check basic LaTeX syntax for the use of package developers. It is installed by copying it into the <code>.git/.hooks</code> file. It then checks the following file types: <code>.sty</code>, <code>.dtx</code>, <code>.bbx</code>, <code>.cbx</code>, and <code>.ltx</code>. List of performed checks: • Each line must be terminated by a <code>%</code>, without a space before it. Empty lines are allowed, but not lines with nothing but spaces in them. • <code>\begin{macro}</code> and <code>\end{macro}</code> must be paired. • <code>\begin{macrocode}</code> and <code>\end{macrocode}</code> must be paired. • <code>\begin{macro}</code> must have a second argument. • One space must be printed between <code>%</code> and <code>\begin{macro}</code> or <code>\end{macro}</code>. <code>%</code> must be the first character in the line. • Four spaces must be printed between <code>%</code> and <code>\begin{macrocode}</code> or <code>\end{macrocode}</code>. • <code>\cs</code> argument must not start with a backslash.

2799 hrefhide – Suppress hyper links when printing

Web page on CTAN <https://ctan.org/pkg/hrefhide>

name	hrefhide
caption	Suppress hyper links when printing
author	Münch, Hans-Martin
copyright	H.-Martin Münch (2010-2025)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.1b (2025-01-27)
last changes	2025-01-27
year	2025

description	(no language specified) This package provides the command <code>\hrefdisplayonly</code> (additionally to <code>\href</code> provided by the <code>hyperref</code> package). While the (hyperlinked) text appears like an ordinary <code>\href</code> in the compiled pdf-file, the same text will be "hidden" when printing the text. Hiding is actually achieved by making the text the same colour as the background, thus preserving the layout of the rest of the text. Further the commands <code>\hycon</code> and <code>\hycoff</code> (hyper-colour-on/off) can be used to simulate switching option <code>ocgcolorlinks</code> of the <code>hyperref</code> package on and off. This package is possibly obsolete, see section 3: "Alternatives" in the documentation.

2811 *humanbio* – Bibliography style for "Human Biology"

description	(no language specified) <i>Lorem ipsum</i> is an improper Latin filler dummy text, cf. the lipsum package. It is commonly used for demonstrating the textual elements of a document template. <i>Lórum ipse</i> is a Hungarian variation of <i>Lorem ipsum</i> . (<i>Lórum</i> is a Hungarian card game, and <i>ipse</i> is a Hungarian slang word meaning <i>bloke</i> .) With this package you can typeset 150 paragraphs of <i>Lórum ipse</i> . All paragraphs are taken with permission from http://www.lorumipse.hu . Thanks to <i>Lórum Ipse Lab</i> (Viktor Nagy and Dávid Takács) for their work.

2819 `hvdashln` – Horizontal and vertical dashed lines in arrays and tabulars

Web page on CTAN <https://ctan.org/pkg/hvdashln>

name `hvdashln`
 caption Horizontal and vertical dashed lines in arrays and tabulars
 author Nakashima, Hiroshi
 copyright Hiroshi Nakashima (1993, 1999)
 license lppl = The LaTeX Project Public License (free)
 description (no language specified) Definitions of horizontal and vertical dashed lines for the array and tabular environment. Instead of building partial horizontal dashed lines using Isozaki's `\cline{2-3}`, `\hdashline` fills the full width. The proportion of the dashed line is defined by the two parameters: `\hdashlinewidth=2pt` and `\hdashlinegap=2pt`, where the former defines the width of the dash and the latter sets their gap.
 Note that this functionality has been re-implemented, for current LaTeX, in the package [arydshln](#) .
 on CTAN <https://ctan.org/tex-archive/macros/latex209/contrib/misc/hvdashln.sty>
 keyword `line-patt` (patterning lines (dashes, etc))

2821 hvfloat – Controlling captions, fullpage and doublepage floatsWeb page on CTAN <https://ctan.org/pkg/hvfloat>

name	hvfloat
caption	Controlling captions, fullpage and doublepage floats
author	Voß, Herbert
copyright	Herbert Voss (2003-2025)
license	lpl = The LaTeX Project Public License (free)
version	2.56 (2025-12-29)
last changes	2025-12-29
year	2025
description	(no language specified) This package defines a macro to place objects (tables and figures) and their captions in different positions with different rotating angles within a float. All objects and captions can be framed. The main command is <code>\hvFloat{float type}{floating object}{caption}{label}</code> ; a simple example is <code>\hvFloat{figure}{\includegraphics{rose}}{Caption}{fig:0}</code> . Options are provided to place captions to the right or left, and rotated. Setting <code>nonFloat=true</code> results in placing the float here.

2831 *hybrid-latex* – Allow active Python code in LaTeX documents

Web page on CTAN <https://ctan.org/pkg/hybrid-latex>

name	hybrid-latex
caption	Allow active Python code in LaTeX documents
author	Brewin, Leo Christopher
copyright	Leo Brewin (2018)
license	mit = MIT License (free)
version	0.1 (2018-08-22)
last changes	2018-08-22
year	2018

description	(no language specified) This is a collection of Python and Bash shell scripts that allows LaTeX documents to contain active Python code. The active code blocks are processed ahead of LaTeX and their results are accessible within the same LaTeX document. Thus a calculation that might otherwise be done in two documents, one using Python to do the maths, and a separate LaTeX document to record the results, can be consolidated into a single source.

2843 *hyperxmp* – Embed XMP metadata within a LaTeX document

Web page on CTAN <https://ctan.org/pkg/hyperxmp>

name	hyperxmp
caption	Embed XMP metadata within a LaTeX document
author	Pakin, Scott
copyright	Scott Pakin (2011-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	5.13
description	(no language specified) XMP (eXtensible Metadata Platform) is a mechanism proposed by Adobe for embedding document metadata within the document itself. The metadata is designed to be easy to extract, even by programs that are oblivious to the document's file format. Most of Adobe's applications store XMP metadata when saving files. Now, with the hyperxmp package, it is trivial for LaTeX document authors to store XMP metadata in their documents as well. The package integrates seamlessly with hyperref and requires virtually no modifications to documents that already exploit hyperref's mechanisms for specifying PDF metadata. The current version of hyperxmp can embed the following metadata as XMP : title, authors, primary author's title or position, metadata writer, subject/summary, keywords, copyright, license URL, document base URL, document identifier and instance identifier, language, source file name, PDF generating tool, PDF version, and contact telephone number/postal address/email address/URL. Hyperxmp currently embeds XMP only within PDF documents; it is compatible with pdfLaTeX, XeLaTeX, LaTeX+dvipdfm, and LaTeX+dvips+ps2pdf.

2845 hyph-utf8 – Hyphenation patterns expressed in UTF-8Web page on CTAN <https://ctan.org/pkg/hyph-utf8>

name	hyph-utf8
caption	Hyphenation patterns expressed in UTF-8
author	Rosendahl, Arthur
author	Hosny, Khaled
author	Miklavac, Mojca
author	Roux, Élie
author	Pégourié-Gonnard, Manuel
copyright	TeX Users Group (2008-2025)
license	mit = MIT License (free)
version	(2025-01-20)
last changes	2025-01-20
year	2025
description	(no language specified) Modern native UTF-8 engines such as XeTeX and LuaTeX need hyphenation patterns in UTF-8 format, whereas older systems require hyphenation patterns in the 8-bit encoding of the font in use (such encodings are codified in the LaTeX scheme with names like OT1, T2A, TS1, OML, LY1, etc). The present package offers a collection of conversions of existing patterns to UTF-8 format, together with converters for use with 8-bit fonts in older systems. Since hyphenation patterns for Knuthian-style TeX systems are only read at iniTeX time, it is hoped that the UTF-8 patterns, with their converters, will completely supplant the older patterns.

2848 hyphenat – Disable/enable hyphenation

Web page on CTAN <https://ctan.org/pkg/hyphenat>

name	hyphenat
caption	Disable/enable hyphenation
author	Robertson, Will
author	Wilson, Peter R.
copyright	Peter R. Wilson (1998-2004)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.3c
description	(no language specified) This package can disable all hyphenation or enable hyphenation of non-alphabetic characters or monospaced fonts. The package can also enable hyphenation within ‘words’ that contain non-alphabetic characters (e.g., that include underscores), and hyphenation of text typeset in monospaced (e.g., cmmtt) fonts.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/hyphenat/hyphenat.pdf

2849 hyphenation-greek – Hyphenation patterns for ancient and modern Greek

Web page on CTAN <https://ctan.org/pkg/hyphenation-greek>

name	hyphenation-greek
caption	Hyphenation patterns for ancient and modern Greek
author	Filippou, Dimitrios
copyright	D. Filippou (2000-2004)
license	lppl = The LaTeX Project Public License (free)
version	4.0
description	(no language specified) Contains the hyphenation patterns for ancient Greek and modern Greek in polytonic (multi-accent) and monotonic (uni-accent) systems. The hyphenation patterns will work perfectly with the <code>babel greek</code> option or with Dryllerakis' <code>GreeKTeX</code> . The patterns can easily be converted for use with the ibycus fonts (see the ibycus-babel package), or with Omega/Lambda (see the antomega package). For any other Greek package, the patterns will have to be re-coded.
documentation	(English) <i>Bundle README</i> : https://ctan.org/tex-archive/language/hyphenation/elhyphen/README
documentation	<i>Article about modern Greek patterns</i> : https://ctan.org/tex-archive/language/hyphenation/elhyphen/modern.pdf

2855 *iacrj* – A document class for IACR journal publications

Web page on CTAN <https://ctan.org/pkg/iacrj>

name	<i>iacrj</i>
caption	A document class for IACR journal publications
author	McCurley, Kevin
copyright	Joppe W. Bos; Kevin S. McCurley (2026)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.9.1
description	(no language specified) The <i>iacrj</i> document class is used to produce publications for three IACR journals. It is intended as an eventual replacement for <i>iacrcc.cls</i> and <i>iacrtrans.cls</i>. It can be used to produce publications for IACR Communications in Cryptology, IACR Transactions on Symmetric Cryptology, and IACR Transactions on Cryptographic Hardware and Embedded Systems. <i>iacrj.cls</i> is part of a larger set of tools for implementing a journal publishing workflow, and it depends on the <i>metacapture.sty</i> package. There is also a companion open source implementation of a publishing workflow written in Python that is used for this journal and provides a simplified workflow for copy editing and production. Further information on this workflow can be found in two articles that were published by the authors: • Lowering the Cost of Diamond Open Access Journals , • A LaTeX publishing workflow

2864 *ibycus-babel* – Use the Ibycus 4 Greek font with Babel

Web page on CTAN <https://ctan.org/pkg/ibycus-babel>

name	ibycus-babel
caption	Use the Ibycus 4 Greek font with Babel
author	Heslin, Peter J.
license	lppl = The LaTeX Project Public License (free)
version	3.0
description	(no language specified) The package allows you to use the Ibycus 4 font for ancient Greek with Babel. It uses a Perl script to generate hyphenation patterns for Ibycus from those for the ordinary Babel encoding, <i>cbgreek</i> . It sets up <i>ibycus</i> as a pseudo-language you can specify in the normal Babel manner. For proper hyphenation of Greek quoted in mid-paragraph, you should use it with <i>elatex</i> (all current distributions of LaTeX are built with <i>e-TeX</i> , so the constraint should not be onerous).

documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/language/greek/ibycus-babel/ibycus-babel.pdf
– local file	<code>./9636820060-ibycus-babel.pdf</code>

2870 *icomma* – Intelligent commas for decimal numbers

Web page on CTAN <https://ctan.org/pkg/icomma>

name	<code>icomma</code>
caption	Intelligent commas for decimal numbers
author	Schmidt, Walter A.
copyright	Walter Schmidt (2001, 2002)
license	lppl = The LaTeX Project Public License (free)
description	(no language specified) An intelligent comma, which yields proper spacing in decimal numbers as well as in mathematical expressions. In contrast to other known solutions, this package does not depend on the encoding of the CM maths fonts, and it works with decimal numbers of arbitrary length. This package is part of the <code>was</code> bundle.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/was/icomma.pdf

2871 *icon-appr* – Creates icon appearances for form buttons

Web page on CTAN <https://ctan.org/pkg/icon-appr>

name	<code>icon-appr</code>
caption	Creates icon appearances for form buttons
author	Story, Donald P.
copyright	D.P.Story (2018-2020)
license	lpl1.2 = The LaTeX Project Public License 1.2 (free)
version	(2020-06-13)
last changes	2020-06-13
year	2020
description	(no language specified) Use this package to create icon appearances for push buttons, check box buttons, and radio buttons form fields. Package works for pdfLaTeX, LuaLaTeX, XeLaTeX, dvips/distiller or dvips/ps2pdf; some techniques require Acrobat. Pdfmark-type drivers require, depending on the method used, aeb_pro or graphicxsp. PDF Viewers: Adobe Reader DC, PDF-XChange Editor, and, of course Adobe Acrobat. SummatraPDF previews the icon buttons very well.

2890 *ifallfalse* – Compare a string against a set of other strings

Web page on CTAN	https://ctan.org/pkg/ifallfalse
name	<i>ifallfalse</i>
caption	Compare a string against a set of other strings
author	Chen, Dennis
copyright	Dennis Chen (2021)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.0.0 (2021-07-22)
last changes	2021-07-22
year	2021
description	(no language specified) This package allows you to check whether a string is contained within another set of strings, and perform an action if it is not. This is done by using the <code>allfalse</code> environment and passing in a string and an action to be performed if the string is not contained in the set. Then, passing in a string to the <code>\orcheck</code> macro inside the respective <code>allfalse</code> environment adds that to the set of strings. This package does not work with the LuaTeX engine.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/ifallfalse/ifallfalse.pdf

2892 *ifetex* – Provides `\ifetex` switch

Web page on CTAN <https://ctan.org/pkg/ifetex>

name	<code>ifetex</code>
caption	Provides <code>\ifetex</code> switch
author	The LaTeX Project Team
author	Scharrer, Martin
copyright	Martin Scharrer (2011-2018)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.3 (2019-10-25)
last changes	2019-10-25
year	2019
description	(no language specified) The package provides the switch <code>\ifetex</code> which indicates whether e-TeX is available or not. The package can be loaded as LaTeX package using <code>\usepackage{ifetex}</code> or in plain TeX using <code>\input ifetex</code>. In either case it aborts silently if the <code>\ifetex</code> macro is already defined. The package's test is whether <code>\eTeXversion</code> is defined as a primitive; if it is, the package assumes e-TeX features are available. Please note, that <code>ifetex</code> is now part of <i>iftex</i>.

2899 ifnextok – Utility macro: peek ahead without ignoring spaces

Web page on CTAN	https://ctan.org/pkg/ifnextok
name	ifnextok
caption	Utility macro: peek ahead without ignoring spaces
author	Lück, Uwe
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.3
description	(no language specified) The package deals with the behaviour of the LaTeX internal command <code>\@ifnextchar</code>, which skips blank spaces. This has the potential to surprise users, since it can produce really unwanted effects. A common example occurs with brackets starting a line following <code>\</code>: the command looks for an optional argument, whereas the user wants the brackets to be printed. The package offers commands and options for modifying this behaviour, maybe limited to certain parts of the document source.

Web page on CTAN	https://ctan.org/pkg/ifoddpag
name	ifoddpag
caption	Determine if the current page is odd or even
author	Scharrer, Martin
copyright	Martin Scharrer (2011-2022)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.2 (2022-10-18)
last changes	2022-10-18
year	2022
description	(no language specified) The package provides an <code>\ifoddpag</code> conditional to determine if the current page is odd or even. The macro <code>\checkoddpag</code> must be used direct before to check the page number using a label. Two compiler runs are therefore required to achieve correct results. In addition, the conditional <code>\ifoddpagoronside</code> is provided which is also true in onside mode where all pages use the odd page layout.

2911 *igo* – Fonts and macro to typeset Go diagramsWeb page on CTAN <https://ctan.org/pkg/igo>

name	<code>igo</code>
caption	Fonts and macro to typeset Go diagrams
author	Dupuis, Étienne
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.62
description	(no language specified) This package is based on the package <code>go</code> written in 1991 by Hanna Kołodziejaska which provides typesetting facilities for Go games and positions. Although <code>igo</code> contains roughly the same commands as the original package and uses the fonts created by Kołodziejaska, it has been improved in a number of ways. It uses command names less likely to conflict with standard AMS packages. It allows different board sizes to be used. It understands a standardized notation for board coordinates. And it provides a facility to work on more than one board. Moreover, a few commands were reworked to define positions or game sequences more conveniently.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/fonts/igo/igo.pdf

2915 *ijmart* – LaTeX Class for the Israel Journal of MathematicsWeb page on CTAN <https://ctan.org/pkg/ijmart>

name	<i>ijmart</i>
caption	LaTeX Class for the Israel Journal of Mathematics
author	Veytsman, Boris
copyright	The Hebrew University Magnes Press (2007)
license	lppl = The LaTeX Project Public License (free)
version	1.7
description	(no language specified) The Israel Journal of Mathematics is published by The Hebrew University Magnes Press. This class provides LaTeX support for its authors and editors. It strives to achieve the distinct "look and feel" of the journal, while having the interface similar to that of the <i>amsart</i> document class. This will help authors already familiar with <i>amsart</i> to easily submit manuscripts for The Israel Journal of Mathematics or to put the preprints in <i>arXiv</i> with minimal changes in the LaTeX source.

2920 imakeidx – A package for producing multiple indexes

Web page on CTAN <https://ctan.org/pkg/imakeidx>

name	imakeidx
caption	A package for producing multiple indexes
author	Gregorio, Enrico
author	Beccari, Claudio
copyright	Enrico Gregorio (2010-2016)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.3e
description	(no language specified) The package enables the user to produce and typeset one or more indexes simultaneously with a document. The package is known to work in LaTeX documents processed with pdfLaTeX, XeLaTeX and LuaLaTeX. If makeindex is used for processing the index entries, no particular setting up is needed when TeX Live is used. Using xindy or other programs it is necessary to enable shell escape; shell escape is also needed if splitindex is used.

2931 *incgraph* – Sophisticated graphics inclusion in a PDF document

Web page on CTAN	https://ctan.org/pkg/incgraph
name	<code>incgraph</code>
caption	Sophisticated graphics inclusion in a PDF document
author	Sturm, Thomas F.
copyright	Prof. Dr. Dr. Thomas F. Sturm (2012-2026)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.4.0 (2026-03-04)
last changes	2026-03-04
year	2026
description	(no language specified) The package provides tools for including graphics at the full size of the output medium, or for creating "pages" whose size is that of the graphic they contain. A principal use case is documents that require inclusion of (potentially many) scans or photographs. Bookmarking is especially supported. The tool box has basic macros and a 'convenience' user interface that wraps <code>\includegraphics</code> .

2938 index – Extended index for LaTeX including multiple indexes

Web page on CTAN <https://ctan.org/pkg/index>

name	<code>index</code>
caption	Extended index for LaTeX including multiple indexes
author	Jones, David M.
copyright	David M. Jones (2024, 2025)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	4.04 (2025-02-06)
last changes	2025-02-06
year	2025
description	(no language specified) This is a reimplementation of LaTeX's indexing macros to provide better support for indexing. For example, it supports multiple indexes in a single document and provides a more robust <code>\index</code> command. It supplies short hand notations for the <code>\index</code> command (<code>^{\word}</code>) and a * variation of <code>\index</code> (abbreviated <code>_{\word}</code>) that prints the word being indexed, as well as creating an index entry for it.
documentation	(no language specified) <i>Package Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/index/README.md

documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/index/index.pdf

2939 *indextools* – Producing multiple indices

Web page on CTAN <https://ctan.org/pkg/indextools>

name	<code>indextools</code>
caption	Producing multiple indices
author	Rouquette, Maïeul
copyright	Enrico Gregorio (2010-2013)
copyright	Maïeul Rouquette (2014-2023)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.7.0 (2023-10-14)
last changes	2023-10-14
year	2023
description	(no language specified) This package enables the user to produce and typeset one or more indices simultaneously. The package is known to work in LaTeX documents processed with pdfLaTeX, XeLaTeX and LuaLaTeX. If <code>makeindex</code> is used for processing the index entries, no particular setup is needed when TeX Live is used. Using <code>xindy</code> or other programs, it is necessary to enable shell escape. Shell escape is also needed if <code>splitindex</code> is used. This is a fork of <code>imakeidx</code>, with new features and fixed bugs.

documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/indextools/indextools.pdf

2950 *inline-images* – Inline images in base64 encoding

Web page on CTAN <https://ctan.org/pkg/inline-images>

name *inline-images*
caption Inline images in base64 encoding
author Wäckerlin, Marc
license lgpl3 = GNU Lesser General Public License 3 (free)
version 1.0
description (no language specified) The package provides a command `\inlineimg` to dynamically create a file containing the inline image in base64 format, which is decoded and included in the source file.

Requirements

- LaTeX must be run with option `-shell-escape` .
- Program `base64` .

documentation (no language specified) *Readme*: <https://ctan.org/tex-archive/macros/latex/contrib/inline-images/README.md>

on CTAN <https://ctan.org/tex-archive/macros/latex/contrib/inline-images>

on MikTeX *inline-images*

on T_EXLive *inline-images*

keyword *image-supp* (manipulating images for inclusion in documents)

2952 inlinedef – Inline expansions within definitions

Web page on CTAN <https://ctan.org/pkg/inlinedef>

name	inlinedef
caption	Inline expansions within definitions
author	Hicks, Stephen
copyright	Stephen D. Hicks (2008)
license	lppl = The LaTeX Project Public License (free)
version	1.0

2953 *inlinedef* – Insert inline images, with automatic size/positioning

description	(no language specified) The package provides a macro <code>\Inline</code> that precedes a <code>\def</code> or <code>\gdef</code> . Within the definition text of an inlined definition, keywords such as <code>\Expand</code> may be used to selectively inline certain expansions at definition-time. This eases the process of redefining macros in terms of the original definition, as well as definitions in which the token that must be expanded is deep within, where <code>\expandafter</code> would be difficult and <code>\edef</code> is not suitable. Another application is as an easier version of <code>\aftergroup</code> , by defining a macro in terms of expanded local variables, then ending the group with <code>\expandafter\endgroup\macro</code> .

2955 innerscript – Small modifications to math formatting

Web page on CTAN <https://ctan.org/pkg/innerscript>

name	innerscript
caption	Small modifications to math formatting
author	Kosowsky, Conrad
copyright	Conrad Kosowsky (2021, 2023-2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.4a (2025-05-08)
last changes	2025-05-08
year	2025
description	(no language specified) This package optionally modifies four aspects of TeX's automatic math formatting to improve typesetting: (1) it adds extra space around relation and operation symbols in superscripts and subscripts; (2) it removes extra space around <code>\left - \right</code> delimiter pairs; (3) it adds extra space after right delimiters in certain situations; and (4) it forces <code>\left</code> and <code>\right</code> delimiters to completely cover their contents. Using LuaLaTeX is required.

2961 inriafonts – Inria fonts with LaTeX support

Web page on CTAN <https://ctan.org/pkg/inriafonts>

name	inriafonts
caption	Inria fonts with LaTeX support
author	Markey, Nicolas
license	lppl = The LaTeX Project Public License (free)
license	ofl = The SIL Open Font License (free)
version	1.0

description	(no language specified) Inria is a free font designed by Black[Foundry] for Inria research institute. The font is available for free. It comes as Serif and Sans Serif, each with three weights and matching italics. Using these fonts with XeLaTeX and LuaLaTeX is easy using the fontspec package; we refer to the documentation of fontspec for more information. The present package provides a way of using them with LaTeX and pdfLaTeX: it provides two style files, <code>InriaSerif.sty</code> and <code>InriaSans.sty</code>, together with the PostScript version of the fonts and their associated files. These were created using <code>autoinst</code>.

year	2023
description	(no language specified) This package provides LaTeX, pdfLaTeX, XeLaTeX and LuaLaTeX support for the Inter Sans family of fonts (version 3.015), designed by Rasmus Andersson. Inter is a typeface specially designed for user interfaces with focus on high legibility of small-to-medium sized text on computer screens. The family features a tall x-height to aid in readability of mixed-case and lower-case text.

author	Chervet, Florent
copyright	Florent Chervet (2010)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	3.1

description	(no language specified) The package provides a small number of convenient macros that access features in <i>other</i> frequently-used packages, or provide interfaces to other useful facilities such as the pdfTeX <code>\pdfelapsedtime</code> primitive. Most of these macros use pgfkeys to provide a key-value syntax. The package also uses the package <code>scrfile</code> from the Koma-Script bundle (for controlled loading of other files) and etoolbox . The package is bundled with sub-packages containing actual interfaces: by default, the package loads all available sub-packages, but techniques are provided for the user to select no more than the interfaces needed for a job.

version	1.0

2978 *interpol* – Add interpolation to MetaPost graph package

description	(no language specified) The <code>interlinear</code> package facilitates the creation of interlinear glossed texts, commonly used in linguistic examples. It is based on the <code>gb4e</code> package and builds upon its functionality to provide enhanced features. It offers extensive customization options, allowing users to control font styles, formatting, and layout. With predefined styles and margin note customization, <code>interlinear</code> provides a flexible solution for presenting linguistic data.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/interlinear/README.md

2978 *interpol* – Add interpolation to MetaPost graph package

Web page on CTAN <https://ctan.org/pkg/interpol>

name	<code>interpol</code>
caption	Add interpolation to MetaPost graph package
author	Vieth, Ulrik
license	<code>noinfo = noinfo</code>
version	1.04
description	(no language specified) This file declares a new internal quantity interpolating and modifies the <code>augment</code> and <code>Mreadpath</code> routines of the MetaPost graph package (part of the base MetaPost distribution) to construct a path from data points using Bezier curves instead of polygons (line segments) when <code>interpolating</code> is set positive. Use of this feature can lead to severe distortions if the data isn't suitable. Its usefulness may best be seen when plotting smooth functions evaluated numerically at discrete intervals.

2979 *interpreter* – Translate input files on the fly

Web page on CTAN <https://ctan.org/pkg/interpreter>

name	<code>interpreter</code>
caption	Translate input files on the fly
author	Isambert, Paul
author	Robbers, Yuri
license	lppl = The LaTeX Project Public License (free)
version	1.2
description	(no language specified) The package preprocesses input files to a Lua(La)TeX run, on the fly. The user defines Lua regular expressions to search for patterns and modify input lines (or entire paragraphs) accordingly, before TeX reads the material. In this way, documents may be prepared in a non-TeX language (e.g., some lightweight markup language) and turned into ‘proper’ TeX for processing. The source of the documentation is typed in such a lightweight language and is thus easily readable in a text editor (the PDF file is also available, of course); the transformation to TeX syntax via Interpreter’s functions is explained in the documentation itself. Interpreter is implemented using the author’s gates (lua version), and works for plain TeX and LaTeX, but not ConTeXt.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/luatex/generic/interpreter/README

2980 *interval* – Format mathematical intervals, ensuring proper spacing

Web page on CTAN <https://ctan.org/pkg/interval>

name	interval
caption	Format mathematical intervals, ensuring proper spacing
author	Madsen, Lars
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.4 (2019-03-06)
last changes	2019-03-06
year	2019
description	(no language specified) When typing an open interval as $]a, b[$, a closing bracket is being used in place of an opening fence and vice versa. This leads to the wrong spacing in, say, $] -a, b[$ or $\\$A\in]a, b[=B\\$. The package attempts to solve this using: <pre>\interval{a}{b} -> [a,b] \interval[open]{a}{b} ->]a,b[\interval[open left]{a}{b} ->]a,b]</pre> The package also supports fence scaling and ensures that the enclosing fences will end up having the proper closing and opening types. TeX maths does not do this job properly. The package depends on pgfkeys.

caption A LaTeX package for typesetting integrals

author Dao, Valentin

copyright Valentin Dao (2025)

license lpl1.3c = The LaTeX Project Public License 1.3c (free)

version 3.0.1 (2026-01-02)

last changes 2026-01-02

year 2026

description (no language specified) Typesetting integrals, although common in LaTeX, is not particularly practical. The way in which the different parts are managed often generates unreadable source code, making modifications laborious. The package therefore follows a simple philosophy: focus on the essential element of an integral, the integrand. Everything else (limits, differentials, symbols) can be modified using keys. These keys are designed to allow you to easily and quickly change the style of an integral. Additionally, the package provides various auxiliary macros to support some keys which can have lengthy inputs.

2991 *ionumbers* – Restyle numbers in maths modeWeb page on CTAN <https://ctan.org/pkg/ionumbers>name *ionumbers*

caption Restyle numbers in maths mode

author Schneider, Christian

copyright Christian Schneider (2007-2009, 2011, 2012, 2014)

license gpl = GNU General Public License (free)

version 0.3.3 (2014-04-06)

last changes 2014-04-06

year 2014

description (no language specified) ‘*ionumbers*’ stands for ‘input/output numbers’.

The package restyles numbers in maths mode. If a number in the input file is written, e.g., as $\$3,231.44\$$ as commonly used in English texts, the package is able to restyle it to be output as $\$3\,,231\{\,,\}44\$$ as commonly used in German texts (and vice versa). This may be useful, for example, if you have a large table and want to include it in texts with different output conventions without the need to change the table.

The package can also automatically group digits left of the decimal separator (thousands) and right of the decimal separator (thousandths) in triplets without the need of specifying commas (English) or points (German) as separators. E.g., the input $\$1234.567890\$$ can be output as $\$1\,,234.\,,567\,,890\$$.

Finally, an *e* starts the exponent of the number. For example, $\$21e6\$$ may be output as $\$26\times10\,,^{\{6\}}\$$.

author	Rasuli, Farshad
copyright	Farshad Rasuli (2023-2024)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.4.3
description	(no language specified) The <i>iran-bibtex</i> package, designed for LaTeX, provides BibTeX styles in accordance with the guidelines outlined in the Iran Manual of Style (1st edn., 2016)—citation guide to Persian, and English information sources. A collection of illustrative examples showcasing the usage of this package has been meticulously prepared and is accessible in the package's GitHub repository under the 'examples' sub-directory. To facilitate alphabetical sorting of references, prioritizing Persian/Farsi items ahead of English/Latin ones, a dedicated file named <i>iran-bibtex-cp1256fa.csf</i> is provided for use with this package. This file, derived from the ascii.csf file, serves the purpose of arranging references in the desired order. It is important to note that this package relies on the natbib package, which is automatically loaded.

3008 *isodate* – Tune the output format of dates according to language

Web page on CTAN <https://ctan.org/pkg/isodate>

name	<code>isodate</code>
caption	Tune the output format of dates according to language
author	Harders, Harald
copyright	Harald Harders (2000-2005)
license	lppl = The LaTeX Project Public License (free)
version	2.28
description	(no language specified) This package provides ten output formats of the commands <code>\today</code>, <code>\printdate</code>, <code>\printdateTeX</code>, and <code>\daterange</code> (partly language dependent). Formats available are: ISO (yyyy-mm-dd), numeric (e.g. dd.\mm.\yyyy), short (e.g. dd.\mm.\yy), TeX (yyyy/mm/dd), original (e.g. dd. mmm yyyy), short original (e.g. dd. mmm yy), as well as numerical formats with Roman numerals for the month.

The commands `\printdate` and `\printdateTeX` print any date. The command `\daterange` prints a date range and leaves out unnecessary year or month entries.

This package supports German (old and new rules), Austrian, US English, British English, French, Danish, Swedish, and Norwegian.

3019 *issuulinks* – Produce external links instead of internal ones

Web page on CTAN <https://ctan.org/pkg/issuulinks>

name	issuulinks
caption	Produce external links instead of internal ones
author	Veytsman, Boris
copyright	Boris Veytsman (2012)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.1
description	(no language specified) The PDF visualizer http://issuu.com/ISSUU is a popular service which shows PDF documents "a page a time". Due to the way it is implemented, internal links in these documents are not allowed. Instead, they must be converted to external ones in the form http://issuu.com/action/page?page=PAGENUMBER. The package patches hyperref to produce external links in the required form instead of internal links created by <code>\ref</code>, <code>\cite</code> and other commands. Since the package redefines the internals of hyperref, it must be loaded it AFTER hyperref.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/issuulinks/README

3021 *istgame* – Draw Game Trees with TikZ

Web page on CTAN <https://ctan.org/pkg/istgame>

name	<code>istgame</code>
caption	Draw Game Trees with TikZ
author	Cho, In-Sung
copyright	In-Sung Cho (2015-2019)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.1 (2022-03-22)
last changes	2022-03-22
year	2022

description	(no language specified) This LaTeX package provides macros based on TikZ to draw a game tree. The main idea underlying its core macros is the completion of a whole tree by using a sequence of simple ‘parent-child’ tree structures, with no longer nested relations involved (like the use of ‘grandchildren’ or ‘great-grandchildren’). Using this package you can draw a game tree as easily as drawing a game tree with pen and paper. This package depends on expl3 , TikZ , and xparse . The ‘ist’ prefix stands for ”it’s a simple tree” or ”In-Sung’s simple tree.”
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/graphics/pgf/contrib/istgame/README.txt

3030 iwona – A two-element sans-serif font

Web page on CTAN <https://ctan.org/pkg/iwona>

name	iwona
caption	A two-element sans-serif font
author	Nowacki, Janusz Marian
copyright	Janusz M. Nowacki (1998-2010)
license	gfl = The GUST Font License (GFL) (free)
version	0.995b
description	(no language specified) Iwona is a two-element sans-serif typeface. It was created as an alternative version of the Kurier typeface, which was designed in 1975 for a diploma in typeface design at the Warsaw Academy of Fine Arts under the supervision of Roman Tomaszewski. This distribution contains a significantly extended set of characters covering the following modern alphabets: latin (including Vietnamese), Cyrillic and Greek as well as a number of additional symbols (including mathematical symbols). The fonts are prepared in Type 1 and OpenType formats. For use with TeX the following encoding files have been prepared: T1 (ec), T2 (abc), and OT2—Cyrillic, T5 (Vietnamese), OT4, QX, texansi and nonstandard (IL2 for

	the Czech fonts), as well as supporting macros and files defining fonts for LaTeX.

license	mit = MIT License (free)
version	5.10
description	(no language specified) JabRef is a graphical frontend to manage BibTeX (and BibLaTeX) databases having BibTeX as internal format. It offers quality checks for entries; fetching complete bibliographic information based on ISBN, DOI, PubMed-ID and arXiv-ID; searching across many online scientific catalogues such as CiteSeer, CrossRef, Google Scholar, IEEEExplore, INSPIRE-HEP, Medline PubMed, MathSciNet, Springer, arXiv, and zbMATH. It allows for grouping entries (and storing the group information in the <code>.bib</code> file itself), advancing searching and filtering, finding duplicate entries, attaching and renaming PDFs (e.g., according to the BibTeX key), and generating BibTeX keys. Since JabRef fully relies on BibTeX, additional information such as ranking, priority, printed-flag, and quality-assured-flag are stored in the BibTeX entry in the <code>.bib</code> file itself.

3054 *jeopardy* – Build a jeopardy game in LaTeX

Web page on CTAN <https://ctan.org/pkg/jeopardy>

name	jeopardy
caption	Build a jeopardy game in LaTeX
author	Mařík, Robert
copyright	Robert Mařík (2004)
license	lppl = The LaTeX Project Public License (free)
version	1.1a
description	(no language specified) The jeopardy package allows to build a jeopardy game with pdfLaTeX. It is based on the jj-game class and exerquiz package, written by D. P. Story. The author of the game can use multichoice questions or fill-in questions. The answer for fill-in questions is either a mathematical formula or text string (see the documentation of exerquiz and <code>\RespBoxMath</code> and <code>\RespBoxTxt</code> commands to learn more about the capabilities). JavaScripts are written to record the score. If the score is greater than a given value, a hidden string is shown. The user should use the style with some screen presentation package, such as web . The package is distributed with some example games, including both 1- and 2-player games.

description	(no language specified) JFlap is an excellent piece of software for experimenting with finite state machines, Turing machines and for exploring many aspects of the theory of computation. JFLAP2TikZ is a script that converts a JFlap ‘ <i>jff</i> ’ file representing a finite automaton, push down automaton, or Turing machine to LaTeX file depicting the automaton graphically using TikZ.

3058 jfmutil – Utility to process pTeX-extended TFM and VFWeb page on CTAN <https://ctan.org/pkg/jfmutil>

name	jfmutil
caption	Utility to process pTeX-extended TFM and VF
author	Yato, Takayuki
copyright	Takayuki YATO (2008-2021)
license	mit = MIT License (free)
version	1.3.3
description	(no language specified) This program provides functionality to process data files (JFM and VF) that form logical fonts used in (u)pTeX . The functions currently available include: • The mutual conversion between Japanese virtual fonts (pairs of VF and JFM) and files in the "ZVP format", which is an original text format representing data in virtual fonts. This function can be seen as a counterpart to the <code>vftovp</code> / <code>vptovf</code> programs. • The mutual conversion between VF files alone and files in the "ZVP0 format", which is a subset of the ZVP format.

3059 jfontmaps – Font maps and configuration tools for Japanese fonts

Web page on CTAN <https://ctan.org/pkg/jfontmaps>

name	jfontmaps
caption	Font maps and configuration tools for Japanese fonts
author	Preining, Norbert
license	pd = Public Domain Software (free)
license	gpl3 = GNU General Public License, version 3 (free)
version	20161108.0
description	(no language specified) The package offers font maps, and supporting material, that make various Japanese fonts available to users of (u)ptex and related programs or formats. The package does not ship any of the fonts mentioned in the documentation, but only map files for use with dvipdfmx ; the user must obtain the other fonts separately. The first exception is that ipa and ipaex the respective fonts are shipped as part of the TeX Live distribution and are available for free. The other exception is that the Yu Mincho/Gothic fonts are available to Windows and MacOSX users, as part of their operating system distribution. This package has now been superseded by ptex-fontmaps .

3068 *jlm* – Jörg’s LaTeX Mode - an advanced LaTeX mode for Jed

Web page on CTAN <https://ctan.org/pkg/jlm>

name	<i>jlm</i>
caption	Jörg’s LaTeX Mode - an advanced LaTeX mode for Jed
author	Sommer, Jörg
copyright	Jörg Sommer (2003-2007)
copyright	Guido Gonzato (2003)

license	gpl = GNU General Public License (free)
version	188
description	(no language specified) JLM is an advanced LaTeX mode for the Jed editor. Its aim is to help the user by taking over annoying and stupid things that need to be done, like adding <code>\usepackage</code> when you add a command or environment from this package, or placing dollar signs around mathematical commands and move the cursor to an appropriate point. JLM does not think for you. If you want a tabular but insert an itemize, JLM doesn't prevent this. So, you should be familiar with LaTeX and know what environments and commands are, and where to place them in a document; JLM is there to help writing them.

3074 *jmsdelim* – A package for compositional delimiter sizing

Web page on CTAN <https://ctan.org/pkg/jmsdelim>

name	<code>jmsdelim</code>
caption	A package for compositional delimiter sizing
author	Sterling, Jonathan
copyright	Jonathan Sterling (2022)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.2.0
description	(no language specified) Correctly sizing delimiters is very difficult, particularly in well-architected documents: a correctly engineered mathematical document will include macros for all operations, and these macros necessarily will include delimiters (such as parentheses). However, the correct size for the delimiter cannot be chosen ahead of time, because it will depend on the arguments; two options are available: 1. Provide optional arguments to each notation macro for choosing delimiter sizes. This is nearly intractable to do in practice. 2. Ignore delimiter sizes.

With `jmsdelim` we offer an alternative: the correct delimiter sizes can be set at the leaf nodes of a mathematical expression, and magically bubble upward through the delimiters.

3077 `jobname-suffix` – Compile differently based on the filename

Web page on CTAN <https://ctan.org/pkg/jobname-suffix>

name	<code>jobname-suffix</code>
caption	Compile differently based on the filename
author	Siefken, Jason
copyright	Jason Siefken (2022)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0
description	(no language specified) This package allows to compile a document differently depending on the portion of the document's file name (internally, the <code>\jobname</code>) that comes after the first "-" character. This allows one to have one source file and multiple links to this source file that each compile differently.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/jobname-suffix/jobname-suffix.pdf
