4593 perpage – Make a counter reset at every page boundary

Web page on CTAN <https://ctan.org/pkg/perpage>

name	perpage
caption	Make a counter reset at every page boundary
author	Kastrup, David
license	gpl2 = GNU General Public License, version 2 (free)
version	1.12

description	(no language specified) The package provides a mechanism to reset counters per page and/or keep their occurrences sorted in order of appearance on the page. The package also defines a command <code>\MakePerPage</code> that designates a counter to be reset per page. For example <code>\MakePerPage[2]{footnote}</code> will cause footnote numbers to start at 2 at the start of every page (the optional argument defaults to 1). The mechanism may require multiple passes to work; LaTeX gives the usual changed label warning if this is necessary. The package is distributed as part of the bigfoot bundle.

last changes	2025-08-29
year	2025
description	(no language specified) PGF is a macro package for creating graphics. It is platform- and format-independent and works together with the most important TeX backend drivers, including pdfTeX and dvips. It comes with a user-friendly syntax layer called TikZ. Its usage is similar to pstricks and the standard picture environment. PGF works with plain (pdf-)TeX, (pdf-)LaTeX, and ConTeXt. Unlike pstricks, it can produce either PostScript or PDF output.

4610 *pgf-spectra* – Draw continuous or discrete spectra using PGF/TikZWeb page on CTAN <https://ctan.org/pkg/pgf-spectra>name *pgf-spectra*

caption Draw continuous or discrete spectra using PGF/TikZ

author Gomes, Hugo

license lpl1.3 = The LaTeX Project Public License 1.3 (free)

version 3.0.2 (2025-06-16)

last changes 2025-06-16

year 2025

description (no language specified) The purpose of this package is to draw the spectrum of elements in a simple way. It relies on **PGF/TikZ** to draw the desired spectrum, continuous or discrete.

Data for the spectra of 98 elements and their ions are available (from the NASA database and from NIST). Lines data ranges from Extreme UV to Near IR (from 10 to 4000 nanometers).

It also allows the user to draw spectra using their own data.

It is possible to redshift the lines of a spectrum, by directly entering the redshift value or the velocity and the angle to compute the redshift value.

Spectral lines data can be presented in a table or exported to a file.

The package also provides color conversion (correlated color temperature), shadings for use with **TikZ** and/or **pgfplots** and color maps for use with **pgfplots**.

4617 *pgfmath-xfp* – Define *pgfmath* functions using *xfp*Web page on CTAN <https://ctan.org/pkg/pgfmath-xfp>

name	<code>pgfmath-xfp</code>
caption	Define <i>pgfmath</i> functions using <i>xfp</i>
author	Spratte, Jonathan P.
copyright	Jonathan P. Spratte (2020-2021)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0a (2025-01-11)

last changes	2025-01-11
year	2025
description	(no language specified) This package allows to define pgfmath functions that use the xfp fpu for their calculations. The input arguments are parsed with pgfmath (while the pgf -fpu is locally active), and the results are forwarded to xfp 's fpu for the function evaluation. The result of that calculation is then parsed by pgfmath again (with the surrounding settings of pgfmath). This way the functions should be usable in every pgfmath context, though there is some overhead to this approach. The package is only meant as a temporary stopgap until a more dedicated solution is available to use xfp in pgf .

4622 *pgfornament-han* – *pgfornament library for Chinese traditional motifs and patterns*

Web page on CTAN <https://ctan.org/pkg/pgfornament-han>

name	pgfornament-han
caption	pgfornament library for Chinese traditional motifs and patterns
author	Lim, LianTze
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	(2024-10-22)
last changes	2024-10-22
year	2024

description	(no language specified) This package provides a pgfornament library for Chinese traditional motifs and patterns. The command <code>\pgfornamenthan</code> takes the same options as <code>\pgfornament</code> from the pgfornament package, but renders Chinese traditional motifs instead. The list of supported motifs, as well as some examples, can be found in the accompanying documentation. This bundle also provides three beamer themes incorporating these motifs; sample <code>.tex</code> files for creating beamer presentations and posters are included. 以 pgfornament 宏包的机制，实现绘制汉风图纹。<code>\pgfornamenthan</code> 和 <code>\pgfornament</code> 的参数是一样的；编译得出来的当然是汉风纹样了。宏包手册里有完整的纹样列表以及使用范例。我们也基于这些纹样，开发了三款beamer主题，并附上制作beamer幻灯片和海报的示范.tex文档。

year	2025

description	(no language specified) PGFPlots draws high-quality function plots in normal or logarithmic scaling with a user-friendly interface directly in TeX. The user supplies axis labels, legend entries and the plot coordinates for one or more plots and PGFPlots applies axis scaling, computes any logarithms and axis ticks and draws the plots, supporting line plots, scatter plots, piecewise constant plots, bar plots, area plots, mesh- and surface plots and some more. Pgfplots is based on PGF/TikZ (PGF); it runs equally for LaTeX/TeX/ConTeXt.

4626 *pgothic* – Fonts based on the Gothic Textura Prescisus manuscript book-hand

Web page on CTAN <https://ctan.org/pkg/pgothic>

name	pgothic
caption	Fonts based on the Gothic Textura Prescisus manuscript book-hand
author	Wilson, Peter R.
license	lppl = The LaTeX Project Public License (free)
description	(no language specified) The pgothic and allpgoth packages provide Metafont fonts based on the Gothic Textura Prescisus vel sine pedibus manuscript book-hand used from the 13th century AD. The font consists of majuscules, minuscules, and digits, with some appropriate period punctuation marks and ligatures. Both normal and bold versions are provided. This is one of a set of manuscript fonts . Access to the docmfp package is desirable but not essential to compile the package documentation.

4627 phaistos – Disk of Phaistos font

Web page on CTAN <https://ctan.org/pkg/phaistos>

name	phaistos
caption	Disk of Phaistos font
author	Syropoulos, Apostolos
copyright	Apostolos Syropoulos (2004)
license	lppl = The LaTeX Project Public License (free)
version	1.0
description	(no language specified) A font that contains all the symbols of the famous Disc of Phaistos, together with a LaTeX package. The disc was ‘printed’ by stamping the wet clay with some sort of punches, probably around 1700 BCE. The font is available in Adobe Type 1 and OpenType formats (the latter using the Unicode positions for the symbols). There are those who believe that this Cretan script was used to ‘write’ Greek (it is known, for example, that the rather later Cretan Linear B script was used to write Greek), but arguments for other languages have been presented.

4628 phfcc – Convenient inline commenting in collaborative documents

Web page on CTAN <https://ctan.org/pkg/phfcc>

name	phfcc
caption	Convenient inline commenting in collaborative documents
author	Faist, Philippe
copyright	Philippe Faist (2021)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.0 (2021-10-06)
last changes	2021-10-06
year	2021
description	(no language specified) Easily define helper macros to insert comments in a LaTeX document. A convenient syntax enables you to mark text additions (e.g., “... \phf{I’m adding this text} ...” or “... \phf I’m adding this text\endphf ...”), an in-line comment (e.g., “... We’re the best \phf[I’m not sure about this.] ...”), and text removals (e.g., “... \phf*{remove me} ...”). New colors are assigned automatically to each commenter by default, and the appearance of all comments is highly customizable.

version	1.0 (2021-09-08)
last changes	2021-09-08
year	2021
description	(no language specified) Several conferences in various fields (such as quantum information theory) require the submission of <i>extended abstracts</i>. An extended abstract is a summary of a scientific result, presented at a high level, and consisting of at most a small handful of pages. The <code>phfextendedabstract</code> LaTeX class provides a simple style for such abstracts. There are only two sectioning levels, sections and paragraphs, and the style is optimized to save space as well as to guide the reader's eye through the overall structure of the document. An option will try to compress all vertical space to save some space, in case you need to satisfy page constraints. The style builds upon the powerful RevTeX class, so you can use all of RevTeX's features such as author affiliations, etc.

license lpl1.3 = The LaTeX Project Public License 1.3 (free)

version 1.5

description (no language specified) In its [mission statement](#) we read "Philosophers' Imprint is a refereed series of original papers in philosophy, edited by philosophy faculty at the University of Michigan, with the advice of an international Board of Editors, and published on the World Wide Web by the University of Michigan Digital Library. The mission of the Imprint is to promote a future in which funds currently spent on journal subscriptions are redirected to the dissemination of scholarship for free, via the Internet".

The class helps authors to typeset their own articles in "Web-ready" format. No assumption is made about the fonts available to the author: the class itself is restricted to freely available and freely distributed fonts, only.

4646 photo – A float environment for photographsWeb page on CTAN <https://ctan.org/pkg/photo>

name	photo
caption	A float environment for photographs
author	Kuhlmann, Volker
license	lppl = The LaTeX Project Public License (free)
description	(no language specified) This package introduces a new float type called photo which works similar to the float types table and figure. Various options exist for placing photos, captions, and a "photographer" line. In twocolumn documents, a possibility exists to generate double-column floats automatically if the photo does not fit into one column. Photos do not have to be placed as floats, they can also be placed as boxes, with captions and photographer line still being available.

4649 *physconst* – Macros for commonly used physical constants

Web page on CTAN <https://ctan.org/pkg/physconst>

name	<code>physconst</code>
caption	Macros for commonly used physical constants
author	Mulligan, Brian W.
copyright	Brian W. Mulligan (2020)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1.2 (2021-03-26)
last changes	2021-03-26
year	2021
description	(no language specified) This package consists of several macros that are shorthand for a variety of physical constants, e.g. the speed of light. The package developed out of physics and astronomy classes that the author has taught and wanted to ensure that he had correct values for each constant and did not wish to retype them every time he uses them. The constants can be used in two forms, the most accurate available values, or versions that are rounded to 3 significant digits for use in typical classroom settings, homework assignments, etc. Most constants are taken from CODATA 2018, with the exception of the astronomical objects, whose values are taken from International Astronomical Union specified values. Constants that are derived from true constants, e.g. the fine structure constant, have been calculated using the accepted values of the fundamental constants.

license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.4b (2020-09-30)
last changes	2020-09-30
year	2020
description	(no language specified) This package was described in the 2nd edition of ‘LaTeX: A Document Preparation System’, but the LaTeX project team declined to produce the package. For a long time, LaTeX included a ‘pict2e package’ that merely produced an apologetic error message. The new package extends the existing LaTeX picture environment, using the familiar technique (cf. the graphics and color packages) of driver files (at present, drivers for dvips, pdfTeX, LuaTeX, XeTeX, VTeX, dvi_{pdf}fm, and dvi_{pdf}mx are available). The package documentation has a fair number of examples of use, showing where things are improved by comparison with the LaTeX picture environment.

4665 *pictex-autoarea* – Automatic computation of bounding boxes with PiCTeX

Web page on CTAN <https://ctan.org/pkg/pictex-autoarea>

name	<code>pictex-autoarea</code>
caption	Automatic computation of bounding boxes with PiCTeX
author	Lück, Uwe
copyright	Uwe Lück (2008)
license	lppl = The LaTeX Project Public License (free)
version	0.3a
description	(no language specified) This package makes PiCTeX recognize lines and arcs in determining the "bounding box" of a picture. (PiCTeX so far accounted for put commands only). The "bounding box" is essential for proper placement of a picture between running text and margins and for keeping the running text away.

4666 `pictex2` – Adds relative coordinates and improves the `\plot` command

4666 `pictex2` – Adds relative coordinates and improves the `\plot` command

Web page on CTAN <https://ctan.org/pkg/pictex2>

name	<code>pictex2</code>
caption	Adds relative coordinates and improves the <code>\plot</code> command
author	Park, William
license	lppl = The LaTeX Project Public License (free)
description	(no language specified) Adds two user commands to standard PiCTeX . One command uses relative coordinates, thus eliminating the need to calculate the coordinate of every point manually as in standard PiCTeX. The other command modifies <code>\plot</code> to use a rule instead of dots if the line segment is horizontal or vertical.

4686 *pkfind* – A ‘find’ command which understands pk files

description	(no language specified) The author found that AFM files generated by pfm2afm lacked glyph bounding box information, so that they are not much use for generating TFM files. This package proceeds by generating a PK file from the Type 1 font by use of ps2pk , and then using information from that to generate a more nearly valid AFM file from the original.

4686 *pkfind* – A ‘find’ command which understands pk files

Web page on CTAN <https://ctan.org/pkg/pkfind>

name	pkfind
caption	A ‘find’ command which understands pk files
author	Vojta, Paul
license	other-free = Free license not otherwise listed (free)
version	1.0
description	(no language specified) The TDS standard specifies that <code>pk</code> and <code>gf</code> files contain <code>\special</code> strings to identify the contents of the files. <code>Pkfind</code> is a variant of the GNU <code>find</code> utility modified to understand those specials, and to act on them in some cases. For example, it can be used to delete all <code>pk</code> files created by gsftopk from a subdirectory tree.

4688 *pkfix-helper* – Make PostScript files accessible to *pkfix*

Web page on CTAN <https://ctan.org/pkg/pkfix-helper>

name	<code>pkfix-helper</code>
caption	Make PostScript files accessible to <code>pkfix</code>
author	Pakin, Scott
copyright	Scott Pakin (2009-2020)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.6 (2020-08-06)

last changes	2020-08-06
year	2020
description	(no language specified) Pkfix is a useful utility for replacing resolution-dependent bitmapped fonts in a dvips-produced PostScript file with the corresponding resolution-independent vector fonts. Unfortunately, pkfix needs to parse certain PostScript comments that appear only in files produced by dvips versions later than 5.58 (ca. 1996); it fails to work on PostScript files produced by older versions of dvips. Pkfix-helper is a program that attempts to insert newer-dvips comments into an older-dvips PostScript file, thereby making the file suitable for processing by pkfix. pkfix-helper can sometimes process documents fully autonomously but does require the user to verify and, if needed, correct its decisions.

Web page on CTAN <https://ctan.org/pkg/plautopatch>

name	plautopatch
caption	Automated patches for pLaTeX/upLaTeX
author	Yamashita, Hironobu
copyright	Hironobu Yamashita (2018-2021)
license	bsd3 = 3-clause BSD License (free)
version	0.9q (2021-12-07)
last changes	2021-12-07
year	2021
description	(no language specified) Japanese pLaTeX/upLaTeX formats and packages often conflict with other LaTeX packages which are unaware of pLaTeX/upLaTeX. In the worst case, such packages throw a fatal error or end up with a wrong output. The goal of this package is that there should be no need to worry about such incompatibilities, because specific patches are loaded automatically whenever necessary. This helps not only to simplify source files, but also to make the appearance of working pLaTeX/upLaTeX sources similar to those of ordinary LaTeX ones.

4717 *playfair* – Playfair Display fonts with LaTeX support

Web page on CTAN <https://ctan.org/pkg/playfair>

name	playfair
caption	Playfair Display fonts with LaTeX support
author	Tennent, Bob
license	ofl = The SIL Open Font License (free)
license	lppl = The LaTeX Project Public License (free)
version	(2022-09-28)
last changes	2022-09-28
year	2022
description	(no language specified) This package provides the PlayFairDisplay family of fonts, designed by Claus Eggers Sørensen, for use with LaTeX, pdfLaTeX, XeLaTeX and LuaLaTeX. PlayFairDisplay is well suited for titling and headlines. It has an extra large x-height and short descenders. It can be set with no leading if space is tight, for instance in news headlines, or for stylistic effect in titles. Capitals are extra short, and only very slightly heavier than the lowercase characters. This helps achieve a more even typographical colour when typesetting proper nouns and initialisms.
documentation	(no language specified) <i>Readme</i>: https://ctan.org/tex-archive/fonts/playfair/README

4725 plnfss – Font selection for Plain TeX

Web page on CTAN <https://ctan.org/pkg/plnfss>

name	plnfss
caption	Font selection for Plain TeX
author	Kotucha, Reinhard
author	Thành, Hàn Thế
author	Konecny, Michal
license	lppl = The LaTeX Project Public License (free)
version	1.1

description	(no language specified) Plnfss is a set of macros to provide easy font access (somewhat similar to NFSS but with some limitations) with Plain TeX. Plnfss can automatically make use of PSNFSS fd files, i.e., when an Adobe Type 1 is used the relevant fd file will be loaded automatically. For cmr-like fonts (ec, vnr, csr or plr fonts), a special format called pfd (plain fd) is required and must be loaded manually. See ot1cmr.pfd for further information.

4726 plpsfont – Polish extension of CM fonts in Type 1 format

Web page on CTAN <https://ctan.org/pkg/plpsfont>

name	plpsfont
caption	Polish extension of CM fonts in Type 1 format
author	Nowacki, Janusz Marian
license	pd = Public Domain Software (free)
version	1.15

description	(no language specified) This package is the Polish extension of the Computer Modern fonts (known as PL fonts), in Adobe Type 1 (PostScript) format. The fonts use the same .tfm files as for the version generated by Metafont . This release of fonts was adapted to the (mostly guessed) demands of the Windows environment, while keeping the fonts usable with TeX; however, encoding files are now added, as Windows and TeX use different encoding schemes.

4732 *pmdb* – Create a DB (PDF) document for selecting content for inclusion in another documents

Web page on CTAN <https://ctan.org/pkg/pmdb>

name	pmdb
caption	Create a DB (PDF) document for selecting content for inclusion in another documents
author	Story, Donald P.
copyright	D. P. Story (2019-2021)
license	lpl1.2 = The LaTeX Project Public License 1.2 (free)
version	(2021-06-07)
last changes	2021-06-07
year	2021
description	(no language specified) The "poor man's database" (pmdb) package promotes a workflow for building exams, homework, and other content. The package supports the creation of a PDF document, which is a database of problems (or content) to be included in a target document. The package inserts checkboxes into the margins of the DB document. The instructor can select which which of the problems are to be included in the target document by checking one ore more of the checkboxes. By clicking the special <code>\displayChoices</code> control, the selected content is copied into the AR/AA console window in the form of <code>\input</code> statements (<code>\input{probl.tex}</code> , eg), which is then be copied and pasted into the target document. By pressing <code>Ctrl+Click</code> while hovering over a checkbox, the associated content is loaded into the default application, possibly a LaTeX editor. For the <code>Ctrl+Click</code> feature to work, the file <code>aeb-reader.js</code> needs

caption	Preprocessor for MusiXTeX
author	Tennent, Bob
author	Simons, Don
license	gpl2 = GNU General Public License, version 2 (free)
version	3.00 (2023-01-27)
last changes	2023-01-27
year	2023

description	(no language specified) PMX provides a preprocessor for MusiXTeX . pmxab builds a TeX input file based on a .pmx input file in a much simpler language, making most of the layout decisions by itself. It has most of MusiXTeX's functionality, but it also permits in-line TeX to give access to virtually all of MusiXTeX. For proof-listening, pmxab will make a MIDI file of your score. scor2prt is an auxiliary program that makes parts from a score.

4749 *polexpr* – A parser for polynomial expressions

Web page on CTAN <https://ctan.org/pkg/polexpr>

name	polexpr
caption	A parser for polynomial expressions
author	Burnol, Jean-François
copyright	Jean-François Burnol (2018-2022)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.8.7a (2022-05-19)
last changes	2022-05-19
year	2022
description	(no language specified) The package provides a parser <code>\poldef</code> of algebraic polynomial expressions. As it is based on xintexpr, the coefficients are allowed to be arbitrary rational numbers. Once defined, a polynomial is usable by its name either as a numerical function in <code>\xintexpr</code> / <code>\xinteval</code>, or for additional polynomial definitions, or as argument to the package macros. The localization of real roots to arbitrary precision as well as the determination of all rational roots is implemented via such macros. Since release 0.8, <i>polexpr</i> extends the xintexpr syntax to recognize polynomials as a new variable type (and not only as functions). Functionality which previously was implemented via macros such as the computation of a greatest common divisor is now available directly in <code>\xintexpr</code>, <code>\xinteval</code> or <code>\poldef</code> via infix or functional syntax.

last changes	2021-08-25
year	2021
description	(no language specified) Tools to typeset monolingual Polish documents in LaTeX2ϵ without babel or polyglossia . The package • loads Polish hyphenation patterns, • ensures that a font encoding suitable for Polish is used; in particular it enables Polish adaptation of Computer Modern fonts (the so-called PL fonts), • provides translations of <code>\today</code> and names like "Bibliography" or "Chapter", • redefines math symbols according to Polish typographical tradition, • provides macros for dashes according to Polish orthography, • provides a historical input method for "Polish characters", • works with traditional TeX as well as with Unicode aware variants. (This package was previously known as platex, but has been renamed to resolve a name clash.)

4752 *poltaawski* – Antykwa Półtawskiego Family of Fonts

Web page on CTAN	https://ctan.org/pkg/poltaawski
name	<code>poltaawski</code>
caption	Antykwa Półtawskiego Family of Fonts
author	Nowacki, Janusz Marian
author	Jackowski, Bogusław
copyright	Bogusław Jackowski, Janusz M. Nowacki and P. Strzelczyk (1999-2010)
license	gfl = The GUST Font License (GFL) (free)
version	1.101
description	(no language specified) The package contains the Antykwa Półtawskiego family of fonts in the PostScript Type 1 and OpenType formats. The original font was designed in the twenties of the XX century by the Polish typographer Adam Półtawski(1881-1952). Following the route set out by the Latin Modern and TeX Gyre projects (https://www.gust.org.pl/projects/e-foundry), the Antykwa Półtawskiego digitisation project aims at providing a rich collection of diacritical characters in the attempt to cover as many Latin-based scripts as possible. To our knowledge, the repertoire of characters covers all European languages as well as some other Latin-based alphabets such as Vietnamese and Navajo; at the request of users, recent extensions (following the enhancement of the Latin Modern collection) provide glyphs sufficient for typesetting of romanized transliterations of Arabic and Sanskrit scripts.

The Antykwa Półtawskiego family consists of 4 weights (light, normal, medium, bold), each having upright and italic forms and one of 5 design sizes: 6, 8, 10, 12 and 17pt. Altogether, the collection comprises 40 font files, containing the same repertoire of 1126 characters.

The preliminary version of Antykwa Półtawskiego (**antp** package) released in 2000 is rendered obsolete by this package.

4760 *poormanlog* – Logarithms and powers with (almost) 9 digits

Web page on CTAN <https://ctan.org/pkg/poormanlog>

name	poormanlog
caption	Logarithms and powers with (almost) 9 digits
author	Burnol, Jean-François
copyright	Jean-François Burnol (2019-2022)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.07 (2022-05-25)
last changes	2022-05-25
year	2022
description	(no language specified) This small package (usable with Plain e-TeX, LaTeX, or others) with no dependencies provides two fast expandable macros computing logarithms in base 10 and fractional powers of 10. They handle arguments of 9 digit tokens which stand for either $1 \leq d.dddddddd < 10$ (for the log) or $0.xxxxxxxxxx$ (for powers of 10). They achieve a precision of 1ulp for the logarithm and 2ulp for fractional powers of ten. Extension to other numerical ranges has to be done by user, via own macros or some math engine. The xintexpr package (at 1.3f) imports the poormanlog macros as core constituents of its log10(), pow10(), log(), exp() and pow() functions.

4761 `popupmenu` – Create popup menus in PDF files

Web page on CTAN <https://ctan.org/pkg/popupmenu>

name `popupmenu`

caption Create popup menus in PDF files

author Story, Donald P.

copyright D.P. Story (2009-2020)

license lppl = The LaTeX Project Public License (free)

version 1.2 (2020-07-26)

last changes 2020-07-26

year 2020

description (no language specified) The package is used to create a menu structure. This menu structure (an array of menu items) is passed to the Acrobat JavaScript method `app.popupMenuEx()` method to create a popup menu. Using the environments defined in the package, and the command `\popupMenu`, you can create and display hierarchical menus. The menu items can have JavaScript actions associated with them, they can be marked and disabled.

The package only requires [hyperref](#). Thus, users of pdfTeX, dvipdfm and dvips can use this package. An example is included in the distribution.

description	(no language specified) The portland package provides portrait and landscape environments, that set page dimensions but don't provide any hints to output devices. Thus, while you can sometimes read the resulting text in a previewer, special measures have to be taken to print the output. The potential user will probably be better served by the lscape package (for DVI oriented output) or pdfscape (if using pdfLaTeX).

4768 poster-mac – Make posters and banners with TeX

Web page on CTAN <https://ctan.org/pkg/poster-mac>

name	poster-mac
caption	Make posters and banners with TeX
author	Van Zandt, Timothy
copyright	Timothy Van Zandt (1993)
license	lpl = The LaTeX Project Public License (free)
version	1.1
description	(no language specified) The package offers macros for making posters and banners with TeX. It is compatible with most TeX macro formats, including Plain TeX, LaTeX, AmSTeX, and AmS-LaTeX. The package creates a poster as huge box, which is then distributed over as many printer pages as necessary. The only special requirement is that your printer not be bothered by text that lies off the page. This is true of most printers, including laser printers and PostScript printers.

Web page on CTAN <https://ctan.org/pkg/postnotes>

name	postnotes
caption	Endnotes for LaTeX
author	gusbrs
copyright	gusbrs (2022-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.5.1 (2024-12-05)
last changes	2024-12-05
year	2024
description	(no language specified) This is an endnotes package for LaTeX. Its user interface provides means to print multiple sections of notes along the document, and to subdivide them either automatically — by chapter, by section — or at manually specified places, thus being able to easily handle both numbered and unnumbered headings. The package also provides infrastructure for setting up contextual running headers for printed notes. The default is a simple but useful one, in the form "Notes to pages N-M", but more elaborate ones can be built. When hyperref is loaded, <i>postnotes</i> provides hyperlinked notes, including back links.

4776 ppmcheckpdf – Convert PDF to PNG and compare PNG files after l3build

Web page on CTAN <https://ctan.org/pkg/ppmcheckpdf>

name	ppmcheckpdf
caption	Convert PDF to PNG and compare PNG files after l3build
author	Lyu, Jianrui
copyright	Jianrui Lyu (2024-2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2025A (2025-02-20)
last changes	2025-02-20
year	2025
description	(no language specified) The build system l3build normally writes the contents of some boxes from <code>.lvt</code> files into corresponding <code>.tlg</code> files. Sometimes a dependent package adds e.g. the command <code>\kern0pt</code>, so that test files fail, even if the PDF files look the same as before and are still correct. The ppmcheckpdf tool offers an alternative option for regression testing: instead of printing the contents of boxes in <code>.lvt</code> files, PDF files are converted to PNG files and you can compare the PNG files after l3build has finished its work.

4789 **present** – **Presentations with Plain TeX**

Web page on CTAN <https://ctan.org/pkg/present>

name	present
caption	Presentations with Plain TeX
author	Meister, Matthias
copyright	Matthias Meister (2010-2019)
license	lppl = The LaTeX Project Public License (free)
version	2.2.1
description	(no language specified) The package offers a collection of simple macros for preparing presentations in Plain TeX. Slide colour and text colour may be set, links between parts of the presentation, to other files, and to web addresses may be inserted. Images may be included easily, and code is available to provide transition effects between slides or frames. The structure of the macros is not overly complex, so that users should find it easy to adapt the macros to their specific needs.
documentation	(no language specified) <i>Package documentation, as a presentation:</i> https://ctan.org/tex-archive/macros/plain/contrib/present/HowToTalkTeX.pdf

4803 *probsoln* – Generate problem sheets and their solution sheets

Web page on CTAN <https://ctan.org/pkg/probsoln>

name *probsoln*

caption Generate problem sheets and their solution sheets

author Talbot, Nicola

license lppl = The LaTeX Project Public License (free)

version 3.05 (2017-07-10)

last changes 2017-07-10

year 2017

description (no language specified) The package is designed for lecturers who have to generate new problem sheets for their students on a regular basis (e.g. yearly) by randomly selecting a specified number of problems defined in another file.

The package allows you easily to generate a new problem sheet that is different from the previous year, thus alleviating the temptation of students to seek out the previous year's students and checking out their answers. The solutions to the problems can be defined along with the problem, making it easy to generate the solution sheet from the same source code; problems may be reused within a document, so that solutions may appear in a different section of the same document as the problems they cover.

4822 `proofread` – Commands for inserting annotations

Web page on CTAN	https://ctan.org/pkg/proofread
name	<code>proofread</code>
caption	Commands for inserting annotations
author	Dekker, Wybo H.
copyright	Wybo Dekker (2017)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.04 (2019-04-25)
last changes	2019-04-25
year	2019

description	(no language specified) This package defines a few LaTeX commands that may be useful when you proofread a LaTeX document. They allow you to easily highlight text and add comments in the margin. Vim escape sequences are provided for inserting or removing these LaTeX commands in the source. Options are provided for displaying the document with extra line spacing, and for displaying it in either corrected or uncorrected state, both without margin notes. The package is based on code for a text highlighting command that was published by Antal Spector-Zabusky on https://tex.stackexchange.com/questions/5959 . The main file, <code>proofread.dtx</code> , is self-extracting, so you can generate the style file by compiling <code>proofread.dtx</code> with pdfLaTeX. This package is based on the soul package; so if you plan to highlight non-ASCII characters, you must compile your source with either XeTeX- or LuaTeX-based compilers.

4824 prooftrees – Forest-based proof trees (symbolic logic)

Web page on CTAN <https://ctan.org/pkg/prooftrees>

name	prooftrees
caption	Forest-based proof trees (symbolic logic)
author	Rees, Clea F.
copyright	Clea F. Rees (2016-2026)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.9.3 (2026-02-21)

last changes	2026-02-21
year	2026
description	(no language specified) The package supports drawing proof trees of the kind often used in introductory logic classes, especially those aimed at students without strong mathematical backgrounds. Hodges (1991) is one example of a text which uses this system. When teaching such a system it is especially useful to annotate the tree with line numbers, justifications and explanations of branch closures. <code>prooftrees</code> provides a single environment, <code>prooftree</code>, and a variety of tools for annotating, customising and highlighting such trees. A cross-referencing system is provided for trees which cite line numbers in justifications for proof lines or branch closures. <code>prooftrees</code> is based on <code>forest</code> and, hence, <code>TikZ</code>. The package requires version 2.1+ of <code>forest</code> for expected results. It will not work with versions prior to 2.1.

4826 *proposal* – A set of LaTeX classes for preparing proposals for collaborative projectsWeb page on CTAN <https://ctan.org/pkg/proposal>

name	<code>proposal</code>
caption	A set of LaTeX classes for preparing proposals for collaborative projects
author	Kohlhase, Michael
copyright	Michael Kohlhase (2010-2016)
license	lppl = The LaTeX Project Public License (free)
version	(2016-04-15)
last changes	2016-04-15
year	2016

description	(no language specified) The process of preparing a collaborative proposal, to a major funding body, involves integration of contributions of a many people at many sites. It is therefore an ideal application for a text-based document preparation system such as LaTeX, in concert with a distributed version control system such as SVN. The <code>proposal</code> class itself provides a basis for such an enterprise. The <code>dfgproposal</code> and <code>dfgproposal</code> classes provide two specialisations of the base class for (respectively) German and European research proposals. The packages depend on the author's <code>stex</code> bundle.

4827 *prosper* – LaTeX class for high quality slides

Web page on CTAN <https://ctan.org/pkg/prosper>

name	<code>prosper</code>
caption	LaTeX class for high quality slides
author	Goualard, Frederic
license	lppl1.2 = The LaTeX Project Public License 1.2 (free)
version	1.0h
description	(no language specified) Prosper is a LaTeX class for writing transparencies. It is written as an extension of the <code>seminar</code> class by Timothy Van Zandt. Prosper offers a friendly environment for creating slides for both presentations with an overhead projector and a video projector. Slides prepared for a presentation with a computer and a video projector may integrate animation

effects, incremental display, and so on. Various visual styles are supported (including some that mimic PowerPoint) and others are being contributed.

4834 *prv* – Compile, preview, and print LaTeX documents

Web page on CTAN <https://ctan.org/pkg/prv>

name	<code>prv</code>
caption	Compile, preview, and print LaTeX documents
author	Dekker, Wybo H.
license	noinfo = noinfo
version	0.7
description	(no language specified) A Perl script that automates the process of generating a LaTeX document. Essentially, it is a highly specialized relative of the general make utility. Given the source files for a document, the script issues the appropriate sequence of commands to generate a <code>.dvi</code> , <code>.ps</code> or hardcopy version of the document. Also includes <code>prvps</code> for PostScript previewing. Derived from LatexMk version 2.0. The author has declared the package obsolete, since packages mk and vpp provide the same sorts of services.
on CTAN	https://ctan.org/tex-archive/obsolete/support/prv
keyword	<code>compilation</code> (the document compilation process)

4836 *ps2eps* – Produce Encapsulated PostScript from PostScript

Web page on CTAN <https://ctan.org/pkg/ps2eps>

name	ps2eps
caption	Produce Encapsulated PostScript from PostScript
author	Bless, Roland
copyright	Roland Bless (1999-2020)
license	gpl = GNU General Public License (free)
version	1.70
description	(no language specified) Produce Encapsulated PostScript Files (EPS/EP_SF) from a one-page PostScript document, or any PostScript document. A correct Bounding Box is calculated for the EPS files and some PostScript command sequences that can produce erroneous results on printers are filtered. The input is cropped to include just the image contained in the PostScript file. The EPS files can then be included into TeX documents. Other programs like <code>ps2epsi</code> (a script distributed with <code>ghostscript</code>) don't always calculate the correct bounding box (because the values are put on the PostScript stack which may get corrupted by bad PostScript code) or they round it off, resulting in clipping the image. Therefore <code>ps2eps</code> uses a resolution of 144 dpi to get the correct bounding box. The bundle includes binaries for Linux, Solaris, Digital Unix or Windows 2000/9x/NT; for other platforms, the user needs <code>perl</code>, <code>ghostscript</code> and an ANSI-C compiler. Included in the distribution is the <code>bbox</code> program, an application to produce Bounding Box values for <code>rawppm</code> or <code>rawpbm</code> format files.

4845 *psbox* – PostScript box macros, etc

Web page on CTAN <https://ctan.org/pkg/psbox>

name	psbox
caption	PostScript box macros, etc
author	Orloff, Jean
license	noinfo = noinfo
version	1.34
description	(no language specified) The package enables incorporation of encapsulated PostScript in LaTeX or Plain TeX documents whose output is destined for a PostScript printer. This functionality is typically nowadays offered by the LaTeX graphics package and its derivatives. The package also provides a means of bundling all files of a document into a single file for transmission by Email or the like.

4847 *pseudo* – Straightforward pseudocode

Web page on CTAN	https://ctan.org/pkg/pseudo
name	<i>pseudo</i>
caption	Straightforward pseudocode
author	Hetland, Magnus Lie
copyright	Magnus Lie Hetland (2019-2023)
license	mit = MIT License (free)
version	1.2.3 (2023-03-21)
last changes	2023-03-21
year	2023
description	(no language specified) The package permits writing pseudocode without much fuss and with quite a bit of configurability. Its main environment combines aspects of <code>enumeration</code>, <code>tabbing</code> and <code>tabular</code> for nonintrusive line numbering, indentation and highlighting, and there is functionality for typesetting common syntactic elements such as keywords, identifiers, and comments. The package relies on <code>aliascnt</code>, <code>array</code>, <code>colortbl</code>, <code>expl3</code>, <code>l3keys2e</code>, <code>xcolor</code>, and <code>xparse</code>.

4849 psfig – A graphics inclusion package

Web page on CTAN <https://ctan.org/pkg/psfig>

name *psfig*
caption A graphics inclusion package
author Darrell, Trevor
license nosell = Do Not Sell Except by Arrangement (not free)
version 1.10
description (no language specified) The *psfig* package enables users to include graphics in LaTeX documents, with a choice of *dvips* and *oxtex* drivers: other output mechanisms are not supported.

The *psfig* package is largely superseded, for various reasons, including its non-free licence. For new work, users are strongly encouraged to use the [LaTeX graphics bundle](#), specifically, either the [graphicx](#) or even [epsfig](#) package. In particular, *epsfig*, which is always to be found in modern distributions, implements a close analogue of the syntax of *psfig*.

documentation (no language specified) *Readme*:

4857 *psfragx* – A *psfrag* eXtension

Web page on CTAN <https://ctan.org/pkg/psfragx>

name	psfragx
caption	A psfrag eXtension
author	Kockaert, Pascal
copyright	Pascal Kockaert (2003-2012)
license	lppl = The LaTeX Project Public License (free)
version	1.1
description	(no language specified) PSfragX offers a mechanism to embed <code>\psfrag</code> commands, as provided by the psfrag package, into the EPS file itself. Each time a graphic is included, the EPS file is scanned. If some tagged lines are found, they are used to define the psfrag replacements that should be performed automatically. In addition, a similar mechanism holds for overpic objects. These are picture objects superimposed on the included graphic. A similar mechanism is implemented in psfrag itself (but deprecated in the documentation), but psfragx offers much more flexibility. For example, if babel is used, it is possible to define different replacements corresponding to different languages. The replacements to take into account will be selected on the basis of the current language of the document. A Matlab script (LaPrint) is provided, to export an EPS file with psfragx annotations ready embedded.

4861 pslatex – Use PostScript fonts by defaultWeb page on CTAN <https://ctan.org/pkg/pslatex>

name	pslatex
caption	Use PostScript fonts by default
author	Carlisle, David
copyright	David Carlisle (1994, 1996, 2021, 2023)
license	lppl = The LaTeX Project Public License (free)
version	1.3 (2023-06-24)

last changes	2023-06-24
year	2023
description	(no language specified) A small package that makes LaTeX default to ‘standard’ PostScript fonts. It is basically a merger of the times and the (obsolete) mathptm packages from the psnfss suite. You must have installed standard LaTeX and the psnfss PostScript fonts to use this package. The main novel feature is that the pslatex package tries to compensate for the visual differences between the Adobe fonts by scaling Helvetica by 90%, and ‘condensing’ Courier (i.e. scaling horizontally) by 85%. The package is supplied with a (unix) shell file for a ‘pslatex’ command that allows standard LaTeX documents to be processed, without needing to edit the file. Note that current psnfss uses a different technique for scaling Helvetica, and treats Courier as a lost cause (there are better free fixed-width available now, than there were when pslatex was designed). As a result, pslatex is widely considered obsolete.

4863 *psnfss* – Font support for common PostScript fonts

Web page on CTAN <https://ctan.org/pkg/psnfss>

name	psnfss
caption	Font support for common PostScript fonts
author	Rahtz, Sebastian
author	Schmidt, Walter A.
author	The LaTeX Project Team
author	Harcombe, Keiran
copyright	Sebastian Rahtz, Walter Schmidt (1995-2020)
license	lppl = The LaTeX Project Public License (free)
version	9.3
description	(no language specified) Font definition files, macros and font metrics for freely-available Adobe Type 1 fonts. The font set consists of the ‘LaserWriter 35’ set (originally ‘freely available’ because embedded in PostScript printers), and a variety of other free fonts, together with some additions. Note that while many of the fonts are available in PostScript (and other) printers, most publishers require fonts <i>embedded</i> in documents, which requires that you have the fonts in your TeX system. Fortunately, there are free versions of the fonts from URW (available in the URW base5 bundle). The base set of text fonts covered by PSNFSS are: AvantGarde, Bookman, Courier, Helvetica, New Century Schoolbook, Palatino, Symbol, Times Roman and Zapf Dingbats. In addition, the fonts Bitstream Charter and Adobe Utopia are covered (those fonts were contributed to the Public Domain by their commercial foundries).

Separate packages are provided to load each font for use as main text font. The packages **helvet** (which allows Helvetica to be loaded with its size scaled to something more nearly appropriate for its use as a Sans-Serif font to match Times) and **pifont** (which provides the means to select single glyphs from symbol fonts) are tailored to special requirements of their fonts.

Mathematics are covered by the **mathptmx** package, which constructs passable mathematics from a combination of Times Roman, Symbol and some glyphs from Computer Modern, and by **Pazo Math** (optionally extended with the **fpl** small-caps and old-style figures fonts) which uses Palatino as base font, with the mathpazo fonts.

The bundle as a whole is part of the **LaTeX ‘required’** set of packages.

year	1995
description	(no language specified) This package provides LaTeX support for the 8r encoding, which is how Adobe Standard Encoding Type 1 fonts are represented within a TeX system. Normally, 8r encoding is merely the base encoding of virtual fonts that specify OT1 or T1 encoding, but when virtual fonts are undesirable (for speed reasons) or unavailable, this package will serve. Users should note that the package is unsupported, and that it is not recommended by the LaTeX team.

4889 *pst-circ* – *PSTricks* package for drawing electric circuits

Web page on CTAN <https://ctan.org/pkg/pst-circ>

name	<code>pst-circ</code>
caption	<i>PSTricks</i> package for drawing electric circuits
author	Voß, Herbert
author	Jorssen, Christophe
license	lppl = The LaTeX Project Public License (free)
version	2.20
description	(no language specified) The package is built using <i>PSTricks</i> and in particular <i>pst-node</i> . It can easily draw current 2-terminal devices and some 3- and 4-terminal devices used in electronic or electric theory. The package's macros are designed with a view to 'logical' representation of circuits, as far as possible, so as to relieve the user of purely graphical considerations when expressing a circuit.

4892 *pst-cox* – Drawing regular complex polytopes with PSTricks

Web page on CTAN <https://ctan.org/pkg/pst-cox>

name *pst-cox*

caption Drawing regular complex polytopes with PSTricks

author Luque, Jean-Gabriel

license lgpl = GNU Lesser General Public License (free)

version 0.98 Beta

description (no language specified) *Pst-cox* is a **PSTricks** package for drawing 2-dimensional projections of complex regular polytopes (after the work of Coxeter).

The package consists of a macro library for drawing the projections. The complex polytopes appear in the study of the root systems and play a crucial role in many domains related to mathematics and physics. These polytopes have been completely described by Coxeter in his book "Regular Complex Polytopes".

There exist only a finite numbers of exceptional regular complex polytopes (for example the icosahedron) and some infinite series (for example, one can construct a multi-dimensional analogue of the hypercube in any *finite* dimension).

The library contains two packages. The first, *pst-coxcoor*, is devoted to the exceptional complex regular polytopes whose coordinates have been pre-computed. The second, *pst-coxeterp*, is devoted to the infinite series.

4895 *pst-diffraction* – Print diffraction patterns from various apertures

Web page on CTAN <https://ctan.org/pkg/pst-diffraction>

name	pst-diffraction
caption	Print diffraction patterns from various apertures
author	Voß, Herbert
author	Luque, Manuel
license	lpl = The LaTeX Project Public License (free)
version	2.06a
description	(no language specified) The package enables the user to draw (using PSTricks) the diffraction patterns for different geometric forms of apertures for monochromatic light (using PSTricks). The aperture stops can have rectangular, circular or triangular openings. The view of the diffraction may be planar, or three-dimensional. Options available are the dimensions of the aperture under consideration and of the particular optical setting, e.g. the radius in case of an circular opening. Moreover one can choose the wavelength of the light (the associated color will be calculated by the package).

caption	Draw flags of countries using PSTricks
author	Manthanwar, Amit M.
copyright	Amit M. Manthanwar (2022-2023)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	(2023-01-09)
last changes	2023-01-09
year	2023
description	(no language specified) This package provides a number of macros for rendering flags of countries and their associated artefacts using PSTricks. Formatting of the resulting drawings is entirely controlled by TeX macros. A good working knowledge of LaTeX should be sufficient to design flags of sovereign countries and adapt them to create new designs. Features such as color or shape customisation and dynamic modifications are possible by cleverly adjusting the options supplied to the TeX macros, see the documentation for examples. This package requires expl3 , fp , xfp , xcolor , pstricks and pst-all .

4910 *pst-func* – **PSTricks** package for plotting mathematical functions

Web page on CTAN <https://ctan.org/pkg/pst-func>

name	pst-func
caption	PSTricks package for plotting mathematical functions
author	Voß, Herbert
license	lppl = The LaTeX Project Public License (free)
version	1.02a (2024-03-31)
last changes	2024-03-31
year	2024
description	(no language specified) The package is built for use with PSTricks . It provides macros for plotting and manipulating various mathematical functions: • polynomials and their derivatives $f(x)=a_n*x^n+a_{n-1}*x^{(n-1)}+...+a_0$ defined by the coefficients $a_0 a_1 a_2 ...$ and the derivative order; • the Fourier sum $f(x) = a_0/2+a_1\cos(\omega x)+...+b_1\sin(\omega x)+...$ defined by the coefficients $a_0 a_1 a_2 ... b_1 b_2 b_3 ...$; • the Bessel function defined by its order; • the Gauss function defined by <i>sigma</i> and <i>mu</i> ; • Bézier curves from order 1 (two control points) to order 9 (10 control points); • the superellipse function (the Lamé curve); • Chebyshev polynomials of the first and second kind; • the Thomae (or popcorn) function; • the Weierstrass function; • various integration-derived functions; • normal, binomial, poisson, gamma, chi-squared, student's t, F, beta, Cauchy and Weibull distribution functions and the Lorenz curve; • the zeroes of a function, or the intermediate point of two functions; • the Vasicek function for describing the evolution of interest rates; and • implicit functions.

4911 *pst-gantt* – Draw GANTT charts with PSTricks

The plots may be generated as volumes of rotation about the X-axis, as well.

4913 *pst-geo* – Geographical Projections

Web page on CTAN <https://ctan.org/pkg/pst-geo>

name	pst-geo
caption	Geographical Projections
author	Matarazzo, Giuseppe
author	Voß, Herbert
author	Luque, Manuel
license	lppl = The LaTeX Project Public License (free)
version	0.09
description	(no language specified) The package offers a set of PSTricks related packages for various cartographic projections of the terrestrial sphere. The package <code>pst-map2d</code> provides conventional projections such as Mercator, Lambert, cylindrical, etc. The package <code>pst-map3d</code> treats representation in three dimensions of the terrestrial sphere. Packages <code>pst-map2dII</code> and <code>pst-map3dII</code> allow use of the CIA World DataBank II. Various parameters of the packages allow for choice of the level of the detail and the layouts possible (cities, borders, rivers etc). Substantial data files are provided, in an (internally) compressed format. Decompression happens on-the-fly as a document using the data is displayed, printed or converted to PDF format. A Perl script is provided for the user to do the decompression, if the need should arise.

4932 *pst-math* – Enhancement of PostScript math operators to use with PSTricksWeb page on CTAN <https://ctan.org/pkg/pst-math>

name	<code>pst-math</code>
caption	Enhancement of PostScript math operators to use with PSTricks
author	Jorssen, Christophe
author	Voß, Herbert
copyright	Herbert Voss (2023)
license	lppl = The LaTeX Project Public License (free)
version	0.67 (2023-07-03)
last changes	2023-07-03
year	2023
description	(no language specified) PostScript lacks a lot of basic operators such as <code>tan</code>, <code>acos</code>, <code>asin</code>, <code>cosh</code>, <code>sinh</code>, <code>tanh</code>, <code>acosh</code>, <code>asinh</code>, <code>atanh</code>, <code>exp</code> (with <code>e</code> base). Also (oddly) <code>cos</code> and <code>sin</code> use arguments in degrees. <code>Pst-math</code> provides all those operators in a header file <code>pst-math.pro</code> with wrappers <code>pst-math.sty</code> and <code>pst-math.tex</code>. In addition, <code>sinc</code>, <code>gauss</code>, <code>gammaln</code> and <code>bessel</code> are implemented (only partially for the latter). The package is designed essentially to work with <code>pst-plot</code> but can be used in whatever PS code (such as <code>PSTricks SpecialCoord</code> "!", which is useful for placing labels). The package also provides a routine <code>SIMPSON</code> for numerical integration and a solver of linear equation systems.

4944 *pst-pdf* – Make PDF versions of graphics by processing between runs

Web page on CTAN <https://ctan.org/pkg/pst-pdf>

name	pst-pdf
caption	Make PDF versions of graphics by processing between runs
author	Gäblein, Hubert
author	Niepraschk, Rolf
copyright	Rolf Niepraschk, Hubert Gäblein (2004-2008)
copyright	Rolf Niepraschk (2008-2020)
license	lpl1.2 = The LaTeX Project Public License 1.2 (free)
version	1.2f
description	(no language specified) The package <i>pst-pdf</i> simplifies the use of graphics from PSTricks and other PostScript code in PDF documents. As in building a bibliography with BibTeX, additional external programmes are invoked. In this case they are used to create a PDF file (<code>\PDFcontainer</code>) that will contain all the graphics material. In the final document these contents will be inserted instead of the original PostScript code. The package works with <i>pstricks</i> and requires a recent version of the <i>preview</i> package.

4962 *pst-spectrum* – Output of a color spectrum for different color models

Web page on CTAN <https://ctan.org/pkg/pst-spectrum>

name	<code>pst-spectrum</code>
caption	Output of a color spectrum for different color models
author	Voß, Herbert
license	lppl = The LaTeX Project Public License (free)
version	1.0 (2026-04-13)
last changes	2026-04-13
year	2026

description	(no language specified) To represent the spectrum of light decomposition, we have several packages at our disposal with PSTricks : pst-spectra , xcolor , and pstricks-add . All use the same source code by Dan Bruton. This package provides an extended visible spectrum. However, it is possible to obtain the representation of the spectrum directly from the data of the »International Commission on Illumination« (CIE), and we have the choice between the data of (CIE 1931) and that of (CIE 1964}). Then we must choose a color space, sRGB, Adobe,etc.

4982 *pstdoc* – A tool for PSTricks documentation

Web page on CTAN <https://ctan.org/pkg/pstdoc>

name	pstdoc
caption	A tool for PSTricks documentation
author	Sharpe, Michael
license	lppl = The LaTeX Project Public License (free)
version	(2011-06-24)
last changes	2011-06-24
year	2011
description	(no language specified) The bundle provides an SQLite database and a Python script that provides extensive help with PSTricks commands from a terminal window. For example <code>pstdoc \psarc</code> gives the syntax of <code>\psarc</code> and all associated keywords, with short definitions. The script is known to work on Mac, Windows, and Linux systems; it requires Python 2.5 or better. The database covers pstricks itself, pst-plot, pst-node, pst-text, pstricks-add, pst-3dplot and related packages.

4985 *pstool* – Support for psfrag within pdfLaTeX

Web page on CTAN <https://ctan.org/pkg/pstool>

name	pstool
caption	Support for psfrag within pdfLaTeX
author	Robertson, Will
author	Prime, Zebb
copyright	Zebb Prime (2008-2014)
copyright	Will Robertson (2008-2018)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.5e (2018-01-20)
last changes	2018-01-20
year	2018
description	(no language specified) The package works in the same sort of way as pst-pdf , but it also processes the PostScript graphics with psfrag to add labels within the graphic, before conversion. Thus the bundle replaces two steps of an ordinary workflow. (Naturally, the package requires that <code>\write 18</code> is enabled.) Pstool ensures that each version of each graphic is compiled once only (the graphic is (re-)compiled only if it has changed since the previous compilation of the document). This drastically speeds up the running of the package in the typical case (though the first run of any document is inevitably just as slow as with any similar package).

4989 pstricks-base – PostScript macros for TeX

Web page on CTAN <https://ctan.org/pkg/pstricks-base>

Alias	pstricks
name	pstricks-base
caption	PostScript macros for TeX
author	Girou, Denis
author	Voß, Herbert
author	Van Zandt, Timothy
copyright	Herbert Voß (2006-2025)
copyright	Timothy Van Zandt (1993, 1994, 2000)
copyright	Denis Girou (2000-2003)
copyright	Herbert Voß and Rolf Niepraschk (2004-2005)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	3.22a (2025-12-13)
last changes	2025-12-13
year	2025
description	(no language specified) PSTricks offers an extensive collection of macros for generating PostScript that is usable with most TeX macro formats, including Plain TeX, LaTeX, AMS-TeX, and AMS-LaTeX. Included are macros for colour, graphics, pie charts, rotation, trees and overlays. It has many special features, including a wide variety of graphics (picture drawing) macros, with a flexible interface and with colour support. There are macros for colouring or shading the cells of tables. The package pstricks-add contains bug-fixes and additions for PSTricks (among other things). PSTricks ordinarily uses PostScript <code>\special</code> commands, which are not supported by pdf(La)TeX. This limitation may be overcome by using either the pst-pdf or the pdftricks package, to generate a PDF inclusion from a PSTricks diagram. PSTricks macros can also generate PDF output when the document is processed XeTeX, without the need for other supporting packages.

5012 *punk* – Donald Knuth’s *punk* font

Web page on CTAN <https://ctan.org/pkg/punk>

name	punk
caption	Donald Knuth’s <i>punk</i> font
author	Knuth, Donald E.
author	Grover, Rohit
license	knuth = Knuth License (free)
description	(no language specified) A response to the assertion in a lecture that “typography tends to lag behind other stylistic changes by about 10 years”. Knuth felt it was (in 1988) time to design a replacement for his designs of the 1970s, and came up with this font! The fonts are distributed as Metafont source. The package offers LaTeX support by Rohit Grover, from an original by Sebastian Rahtz, which is slightly odd in claiming that the fonts are T1-encoded. A (possibly) more rational support package is to be found in punk-latex
documentation	(no language specified) <i>TUGboat</i> paper: https://tug.org/TUGboat/Articles/tb09-2/tb21knut.pdf

5015 *purifyeps* – Make EPS work with both LaTeX/dvips and pdfLaTeX

Web page on CTAN <https://ctan.org/pkg/purifyeps>

name	purifyeps
caption	Make EPS work with both LaTeX/dvips and pdfLaTeX
author	Pakin, Scott
copyright	Scott Pakin (2009)
license	lppl = The LaTeX Project Public License (free)
version	1.1

description	(no language specified) While pdfLaTeX has a number of nice features, its primary shortcoming relative to standard LaTeX+dvips is that it is unable to read ordinary Encapsulated PostScript (EPS) files, the most common graphics format in the LaTeX world. Purifyeps converts EPS files into a ‘purified’ form that can be read by both LaTeX+dvips and pdfLaTeX. The trick is that the standard LaTeX2e graphics packages can parse MetaPost-produced EPS directly. Hence, purifyeps need only convert an arbitrary EPS file into the same stylized format that MetaPost outputs.

5017 pwebmac – Consolidated WEB macros for DVI and PDF output

Web page on CTAN <https://ctan.org/pkg/pwebmac>

name	pwebmac
caption	Consolidated WEB macros for DVI and PDF output
author	Scherer, Andreas
license	pd = Public Domain Software (free)
version	5.1 (2025-03-16)
last changes	2025-03-16
year	2025
description	(no language specified) The original WEB system by Donald Knuth has the macros <code>webmac.tex</code> that produce DVI output only; for historic reasons, it will never be modified (apart from catastrophic errors). Hàn Thế Thành has modified these macros in his <code>pdfwebmac.tex</code> for PDF output (only) with pdfTeX . Jonathan Kew's XeTeX has similar macros <code>xewebmac.tex</code> by Khaled Hosny that <i>modify</i> <code>webmac.tex</code> for PDF output; these macros can only be used with a specific "TeX engine" each.

The present `pwebmac` package integrates these three WEB macro files similar to `cwebmac.tex` in Silvio Levy’s and Don Knuth’s **CWEB** system, so `pwebmac.tex` can be used with ”plain TeX”, pdfTeX, and XeTeX alike.

Its initial application is the production of PDF files for all major WEB programs for ”TeX and friends” as distributed in **TeX Live** . For this purpose, the shell script `makeall` was whipped together; it provides various commandline options and works around several ”quirks” in the WEB sources.

WEB programmers who want to use `pwebmac.tex` instead of the default `webmac.tex` in their programs have to change the first line in the TeX file created by `weave` . From there, all depends on the ”TeX engine” you use.

5023 *pxgreek*s – Shape selection for PX fonts Greek letters

Web page on CTAN <https://ctan.org/pkg/pxgreek>

name	<code>pxgreek</code> s
caption	Shape selection for PX fonts Greek letters
author	Burnol, Jean-François
copyright	Jean-François Burnol (2011)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0
description	(no language specified) The package allows LaTeX maths users of the PX fonts to select the shapes (italic or upright) for the Greek lowercase and uppercase letters. Once the shapes for lowercase and uppercase have been selected via a package option, the <code>\other</code> prefix (e.g., <code>\otheralpha</code>) allows using the alternate glyph (as in the <code>fourier</code> package). The <code>pxgreek</code> s package does not constrain the text font that may be used in the document.

5025 `pxjodel` – Help change metrics of fonts from `japanese-otf`Web page on CTAN <https://ctan.org/pkg/pxjodel>

name	<code>pxjodel</code>
caption	Help change metrics of fonts from <code>japanese-otf</code>
author	Yato, Takayuki
copyright	Takayuki YATO (aka. “ZR”) (2019-2020)
license	mit = MIT License (free)
version	0.3 (2020-05-04)
last changes	2020-05-04
year	2020
description	(no language specified) This package changes the setup of the <code>japanese-otf</code> package so that the TFM_s for direct input are all replaced by new ones with prefixed names; for example, <code>nmlminr-h</code> will be replaced by <code>foo-nmlminr-h</code>, where <code>foo</code> is a prefix specified by the user. This function will assist users who want to use the <code>japanese-otf</code> package together with tailored TFM_s of Japanese fonts. The “jodel” part of the package name stands for “japanese-otf deluxe”. Here “deluxe” is the name of <code>japanese-otf</code>’s option for employing multi-weight Japanese font families. This option is probably the most likely reason for using <code>japanese-otf</code>. So <code>pxjodel</code> is really about <code>japanese-otf</code>’s “deluxe” option, hence the name. It is not related to yodel singing, although some sense of word-play is intended.

name	pxufont
caption	Emulate non-Unicode Japanese fonts using Unicode fonts
author	Yato, Takayuki
copyright	Takayuki YATO (2017-2023)
license	mit = MIT License (free)
version	0.7 (2023-07-07)
last changes	2023-07-07
year	2023
description	(no language specified) The set of the Japanese logical fonts (JFMs) that are used as standard fonts in pTeX and upTeX contains both Unicode JFMs and non-Unicode JFMs. This bundle provides an alternative set of non-Unicode JFMs that are tied to the virtual fonts (VFs) that refer to the glyphs in the Unicode JFMs. Moreover it provides a LaTeX package that redefines the NFSS settings of the Japanese fonts of (u)pLaTeX so that the new set of non-Unicode JFMs will be employed. As a whole, this bundle allows users to dispense with the mapping setup on non-Unicode JFMs. Such a setup is useful in particular when users want to use OpenType fonts (such as Source Han Serif) that have a glyph encoding different from Adobe-Japan1, because mapping setups from non-Unicode JFMs to such physical fonts are difficult to prepare.

5034 *pydocstrip* – Scripted version of LaTeX docstrip

description	(no language specified) Pybliographer currently supports BibTeX files for reading and writing, and can also read Ovid files (from ovid.com). Support for Refer is available. This bibliographical manager can be used for searching, editing, reformatting, etc. It provides a simple framework that provides easy to use python classes and functions, and therefore can be extended to any usage (generating HTML pages according to bibliographic searches, etc). As an example, a simple tool called pybcheck is provided with the package to check for the validity of BibTeX files. In addition to the scripting environment, a graphical GNOME interface is available, providing editing capabilities in addition to a nice hierarchical search mechanism.

last changes	2026-03-15
year	2026
description	(no language specified) The pyjupyter package provides a lightweight and elegant environment for typesetting Python code in LaTeX documents with a visual style inspired by Jupyter notebooks. It leverages the listings package for syntax highlighting and tcolorbox for structured, breakable frames. Key features include: • Full support for French accents and UTF-8 encoding. • Intelligent syntax highlighting for Python operators and keywords. • A dedicated numbered option for line numbering. • Seamless integration with TeXstudio via an included .cwl file for auto-completion. • Robust handling of Python comments (#) using an optional argument syntax. • Font selection. • Code size modification.

5037 *pyluatex* – Execute Python code on the fly in your LaTeX documents

Web page on CTAN <https://ctan.org/pkg/pyluatex>

name	PyLuaTeX
caption	Execute Python code on the fly in your LaTeX documents
author	Enderle, Tobias
copyright	Tobias Enderle (2021-2024)
license	mit = MIT License (free)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.6.3
description	(no language specified) PyLuaTeX allows you to execute Python code and to include the resulting output in your LaTeX documents in a <i>single compilation run</i>. LaTeX documents must be compiled with LuaLaTeX for this to work. PyLuaTeX runs a Python <i>InteractiveInterpreter</i> (actually several if you use different sessions) in the background for on-the-fly code execution. Python code from your LaTeX file is sent to the background interpreter through a TCP socket. This approach allows your Python code to be executed and the output to be integrated in your LaTeX file in a single compilation run. No additional processing steps are needed. No intermediate files have to be written. No placeholders have to be inserted.

description	(no language specified) Just like PerlTeX or PyLuaTeX (and unlike PythonTeX or lt3luabridge), this only requires a single run, and variables are persistent throughout the run. Unlike PerlTeX or PyLuaTeX, there is no restriction on compiler or script required to run the code. There are also debugging functionalities: TeX errors result in Python traceback, and Python errors result in TeX traceback. Errors in code executed with the <code>pycode</code> environment give the correct traceback point to the Python line of code in the TeX file. For advanced users, this package allows the user to manipulate the TeX state directly from within Python, so you don't need to write a single line of TeX code. CAUTION: In addition to this LaTeX package you need the Python <code>pythonimmediate-tex</code> package, which can be obtained from https://pypi.org/project/pythonimmediate-tex/.

5042 *pythontex* – Run Python from within a document, typesetting the results

Web page on CTAN <https://ctan.org/pkg/pythontex>

name	pythontex
caption	Run Python from within a document, typesetting the results
author	Poore, Geoffrey
copyright	Geoffrey M. Poore (2012-2026)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
license	bsd3 = 3-clause BSD License (free)
version	0.19 (2026-02-15)
last changes	2026-02-15
year	2026
description	(no language specified) The package allows you to enter Python code within a LaTeX document, execute the code, and access its output in the original document. There is also support for Bash, JavaScript, Julia, Octave, Perl, R, Raku (Perl 6), Ruby, Rust, and SageMath. Code is only executed when it has been modified, or when it meets user-specified criteria. Code may be divided into user-defined sessions, which automatically run in parallel. Errors and warnings are synchronized with the LaTeX document, so that they refer to the document's line numbers. External dependencies can be tracked, so that code is re-executed when the data it depends on is modified. PythonTeX

also provides syntax highlighting for code in LaTeX documents via the Pygments syntax highlighter.

The package provides a `depythontex` utility. This creates a copy of the document in which all Python code has been replaced by its output. This is useful for journal submissions, sharing documents, and conversion to other formats.

5043 pzccal – Zapf Chancery as calligraphic math alphabet

Web page on CTAN <https://ctan.org/pkg/pzccal>

name	pzccal
caption	Zapf Chancery as calligraphic math alphabet
author	Milde, Günter
copyright	Günter Milde (2008, 2010)
license	lpl = The LaTeX Project Public License (free)
version	0.3
description	(no language specified) The package establishes the Zapf Chancery font (<code>pzcmit</code>) as script (calligraphic) math alphabet <code>\mathpzc</code> . It provides options to scale the font and to configure the alias command name. By default, the package overwrites the predefined math alphabet command <code>\mathcal</code> . The author has now declared the package obsolete, since he believes that the urwchancal package does the job better.

5047 *qcm* – A LaTeX2e class for making multiple choice questionnaires

Web page on CTAN <https://ctan.org/pkg/qcm>

name	QCM
caption	A LaTeX2e class for making multiple choice questionnaires
author	Verna, Didier
copyright	Didier Verna (2004)
license	lpl = The LaTeX Project Public License (free)
version	2.1
description	(no language specified) QCM is a package for making multiple choices questionnaires under LaTeX2e ("QCM" is the French acronym for this style of test). A special environment allows you to define questions and possible answers. You can specify which answers are correct and which are not. QCM not only formats the questions for you, but also generates a 'form' (a grid that your students will have to fill in), and a 'mask' (the same grid, only with correct answers properly checked in). You can then print the mask on a slide and correct the questionnaires more easily by superimposing the mask on top of students' forms. QCM can also typeset exam corrections automatically, and comes with support for AUC-TeX .
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/qcm/README

5057 *qrcodetikz* – Prettier QR codes

Web page on CTAN <https://ctan.org/pkg/qrcodetikz>

name	qrcodetikz
caption	Prettier QR codes
author	Frasson, Miguel Vinícius Santini
copyright	Miguel V. S. Frasson (2025)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0 (2025-05-28)
last changes	2025-05-28
year	2025
description	(no language specified) This package improves the display of QR codes provided by qrcode . The Quick Response (QR) codes provided by package qrcode show white borders on each square (from little to very prominent, depending on the pdf viewer). This is because the QR code is printed square by square, not the connected regions of squares as such, and pdf screen viewers show these undesired borders. This package overwrites the qrcode printing functions to fill connected regions of the QR code using TikZ , allowing prettier qrcodes on screen visualization, with possibility of customization.

5060 *qstest* – Bundle for unit tests and pattern matching

Web page on CTAN <https://ctan.org/pkg/qstest>

name	qstest
caption	Bundle for unit tests and pattern matching
author	Kastrup, David
copyright	QuinScape GmbH (2006, 2007)
license	lppl = The LaTeX Project Public License (free)
version	(2007-02-23)
last changes	2007-02-23
year	2007
description	(no language specified) This is the public release of the qstest bundle (written for DocScape Publisher) (C) 2006, 2007 QuinScape GmbH. The bundle contains the packages ‘makematch’ for matching patterns to targets (with a generalization in the form of pattern lists and keyword lists), and ‘qstest’ for performing unit tests, allowing the user to run a number of logged tests ensuring the consistency of values, properties and call sequences during execution of test code. Both packages make extensive use of in their package documentation, providing illustrated examples that are automatically verified to work as expected. Check the README file for details.

5066 *quantumarticle* – Document class for submissions to the Quantum journal

Web page on CTAN <https://ctan.org/pkg/quantumarticle>

name	quantumarticle
caption	Document class for submissions to the Quantum journal
author	Quantum — the open journal for quantum science
author	Meyer, Johannes Jakob
author	Gogolin, Christian
copyright	Verein zur Förderung des Open Access Publizierens in den Quantenwissenschaften (2016-2022)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	6.1
description	(no language specified) This package provides the preferred document class for papers to be submitted to "Quantum — the open journal of quantum science". It is based on the widely used article document class and designed to allow a seamless transition from documents typeset with the article, revtex4-1, and elsarticle document classes. As a service to authors, the document class comes with a predefined bibliography style <code>quantum.bst</code> that is optimized to be used with the <code>quantumarticle</code> document class. Additionally, the <code>quantumview</code> documentclass is provided, which can be used as a proxy to typeset the HTML-only editorial pieces in Quantum Views in a LaTeX editor. The <code>quantumarticle</code> document class also offers an option to remove the Quantum-related branding. In that way, users appreciating the esthetics of this document class can use it for their notes as well.

description	(no language specified) This package provides simple LaTeX commands to draw intuitive cube-based diagrams for quantum states of one, two, or three qubits. Inspired by Prof. B. Just's educational framework, it supports amplitude-phase notation, gate transition visualizations (Hadamard, Pauli, CNOT, Toffoli). The package is ideal for teaching and documenting small quantum circuits.

5068 *quattrocento* – Quattrocento and Quattrocento Sans fonts with LaTeX supportWeb page on CTAN <https://ctan.org/pkg/quattrocento>

name	quattrocento
caption	Quattrocento and Quattrocento Sans fonts with LaTeX support
author	Tennent, Bob
license	lppl = The LaTeX Project Public License (free)

license	ofl = The SIL Open Font License (free)
version	(2022-09-13)
last changes	2022-09-13
year	2022
description	(no language specified) The package provides LaTeX, pdfLaTeX, XeLaTeX and LuaLaTeX support for the Quattrocento and Quattrocento Sans families of fonts, designed by Pablo Impallari; the fonts themselves are also provided, in both TrueType and Type1 format. Quattrocento is a classic typeface with wide and open letterforms, and great x-height, which makes it very legible for body text at small sizes. Tiny details that only show up at bigger sizes make it also great for display use. Quattrocento Sans is the perfect sans-serif companion for Quattrocento.
documentation	(no language specified) <i>Readme (the primary documentation)</i>: https://ctan.org/tex-archive/fonts/quattrocento/README

5089 *qworld* – Drawing string diagrams for monoidal categories and quantum theory in TeX

Web page on CTAN <https://ctan.org/pkg/qworld>

name	QWorld
caption	Drawing string diagrams for monoidal categories and quantum theory in TeX
author	Ryota, Niina
copyright	Niina Ryota (2025)

license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1.2
description	(no language specified) This LaTeX package has been designed for the typesetting of graphical languages grounded in monoidal category theory and its extensions. It provides a declarative, LaTeX-native interface for rendering string diagrams, eliminating the need for any external graphics software or manual image management. The package supports a wide spectrum of categorical structures frequently encountered in categorical quantum mechanics, algebraic structures, and diagrammatic reasoning, including but not limited to: • Monoidal and symmetric monoidal categories • Dual objects and pivotal / rigid categories • Dagger categories • Frobenius algebras and Hopf algebras • Braided, balanced, and ribbon categories Internally, QWorld builds upon the TikZ graphics framework, but introduces a domain-specific layer of abstraction that aligns diagram syntax closely with categorical semantics. This design facilitates accurate and transparent visual representations of morphisms, tensor products, and composition, thereby supporting both formal exposition and pedagogical use. QWorld is intended for researchers and educators working in categorical logic, quantum foundations, topological quantum field theory (TQFT), and related domains where graphical calculi constitute an essential mode of reasoning.

copyright	Qian Yuan Xue Fu (2020)
license	mit = MIT License (free)
version	3.1.0 (2020-09-11)
last changes	2020-09-11
year	2020
description	(no language specified) <code>qyxf-book</code> is a LaTeX document class (template) developed by Qian Yuan Xue Fu (QYXF), a student club of Xi'an Jiaotong University (XJTU). Up to now, this template has been applied to academic counselling material ("course helpers") written by members of QYXF, including • Solutions to University Physics: https://qyxf.site/latest/大物题解(上).pdf • Notes on Computing Methods: https://qyxf.site/latest/计算方法撷英-v1.1.pdf • Guide to Computer Programming: https://qyxf.site/latest/计算机设计程序指南.pdf

Features of the template:

- Minimalistic document style, as preferred for "course helpers".

- Several color schemes are offered, and it is easy to customize your own scheme.
- Simple interfaces for users to customize the style of preface, main part and so on.

Currently the template is only designed for *Chinese* typesetting.

description	(no language specified) <i>R2bib</i> and <i>EndNote2bib</i> read files (respectively in refer and EndNote format) and produces a BibTeX reference list on the standard output. Since refer files are inherently unstructured, <i>r2bib</i> only does a passable job (for example, it may need to invent a key for an entry, and it has to guess what BibTeX entry type to generate).

5093 *ragged* – Generic ragged left and ragged right options

EndNote tags may not always match those recognised by EndNote2bib; a further filter program EndNoteTag is provided

documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/biblio/bibtex/utils/r2bib/README
on CTAN	https://ctan.org/tex-archive/biblio/bibtex/utils/r2bib

5100 *ran_toks* – Randomise token strings

Web page on CTAN https://ctan.org/pkg/ran_toks

name	<code>ran_toks</code>
caption	Randomise token strings
author	Story, Donald P.
copyright	D. P. Story (1999-2021)
license	lpl1 = The LaTeX Project Public License 1 (free)
version	(2021-06-06)
last changes	2021-06-06
year	2021
description	(no language specified) The package provides means of randomising lists of tokens, or lists of chunks of tokens. Two mechanisms for defining chunks are provided: • the <code>\ranToks</code> command accepts an argument containing tokens to be randomised; and • the <code>\bRTVToks</code> / <code>\eRTVToks</code> commands delimit a collection of tokens for randomising; each group inside a <code>rtVw</code> constitutes one of these (typically larger) token sets.

description	(no language specified) This is a compatible rewrite of LaTeXDB (by Hans-Georg Eßer) in Ruby. It is a preprocessor which performs SQL queries on a database and creates LaTeX code for the resulting rows. Ratexdb implements a few improvements, e.g. regexp postprocessing, command-line options, some protection against SQL injection, replacement of LaTeX reserved characters. ratexdb is no longer being developed; it's replacement is nlatexdb .
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/support/ratexdb/README

5114 rawfonts – Low level font compatibility mode for LaTeX

Web page on CTAN <https://ctan.org/pkg/rawfonts>

name	rawfonts
caption	Low level font compatibility mode for LaTeX
author	Jeffrey, Alan
author	The LaTeX Project Team
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.01
description	(no language specified) A package to define the low-level font commands that existed in LaTeX 2.09, for the benefit of old documents (or packages) that used them. Since this is potentially an expensive operation (loading lots of fonts), the package allows you to chop and choose:

5115 *rawprint* – Print raw Russian text

```
\usepackage[only,tenrm,sevsf]{rawfonts}
```

will load just `\tenrm` and `\sevsf`. (This facility uses the `somedefs` package).

The package is part of the `latex-tools` bundle in the LaTeX `required` distribution.

documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/required/tools/rawfonts.pdf
– local file	<code>./4321269661-rawfonts.pdf</code>
on CTAN	https://ctan.org/tex-archive/macros/latex/required/tools
installation	https://ctan.org/tex-archive/install/macros/latex/required/latex-tools.tds.zip
keyword	<code>font-supp</code> (metrics, macro incantations and other font support)
language(s)	no language specified
year	without year
last access	2025-02-07

5115 *rawprint* – Print raw Russian text

Web page on CTAN <https://ctan.org/pkg/rawprint>

name	<code>rawprint</code>
caption	Print raw Russian text
author	Veytsman, Boris
license	lppl = The LaTeX Project Public License (free)
description	(no language specified) A package for "quick and dirty" printing of raw (i.e., non-TeX) Russian texts by persons who do not have Russian printer fonts (but have Cyrillic TeX). It makes various symbols "normal" letters and converts the "unisex" quote character <code>""</code> into Russian-style <code>«</code> and <code>»</code> quotes.

5118 *r*cs – Use RCS (revision control system) tags in LaTeX documents

Web page on CTAN <https://ctan.org/pkg/rcs>

name	<i>r</i> cs
caption	Use RCS (revision control system) tags in LaTeX documents
author	Gilbey, Julian
author	Schrod, Joachim
license	gpl = GNU General Public License (free)
version	(2007-06-06)
last changes	2007-06-06
year	2007
description	(no language specified) The <i>r</i>cs package utilizes the inclusion of RCS supplied data in LaTeX documents. It's upward compatible to <i>*all*</i> <i>r</i>cs styles I know of. In particular, you can easily • access values of every RCS field in your document • put the checkin date on the titlepage • put RCS fields in a footline You can typeset revision logs. Not in verbatim – real LaTeX text! But you need a configurable RCS for that. Refer to the user manual for more detailed information. You can also configure the <i>r</i>cs package easily to do special things for any keyword. This bundle comes with a user manual, an internal interface description, full documentation of the implementation, style information for AUC-TeX, and test cases.

5123 readarray – Read, store and recall array-formatted dataWeb page on CTAN <https://ctan.org/pkg/readarray>

name	readarray
caption	Read, store and recall array-formatted data
author	Segletes, Steven B.
copyright	Steven B. Segletes (2013-2021)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	3.1 (2021-09-17)
last changes	2021-09-17
year	2021
description	(no language specified) The package allows the user to input formatted data into elements of a 2-D or 3-D array and to recall that data at will by individual cell number. The data can be but need not be numerical in nature. It can be, for example, formatted text. While the package can be used for any application where indexed data is called for, the package proves particularly useful when elements of multiple arrays must be recallable and dynamically combined at time of compilation, rather than in advance.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/readarray/README

5124 readprov – Provides `GetFileInfo` without the need to load the file

Web page on CTAN <https://ctan.org/pkg/readprov>

name	readprov
caption	Provides <code>GetFileInfo</code> without the need to load the file
author	Lück, Uwe
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.5
description	(no language specified) The package provides a <code>\GetFileInfo</code> command (as in the LaTeX standard <code>doc</code> package, but without the need to load the <code>doc</code> package). The package also provides new robust (expandable) variants of <code>\GetFileInfo</code>, even without loading the file itself (reading the file is stopped when the requisite information is found). So, for exaple, you can describe packages that are incompatible with each other or with packages that your document uses, or even report about class files (that are plainly not loadable). Files examined in this way also enter the output of <code>\listfiles</code>. The package is part of the <code>fileinfo</code> bundle.
documentation	(no language specified) <i>Bundle readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/fileinfo/README.pdf

5125 *realboxes* – Variants of common box-commands that read their content as real box and not as macro argument

Web page on CTAN <https://ctan.org/pkg/realboxes>

name	realboxes
caption	Variants of common box-commands that read their content as real box and not as macro argument
author	Scharrer, Martin
copyright	Martin Scharrer (2011)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.2
description	(no language specified) The package uses the author's package collectbox to define variants of common box related macros which read the content as real box and not as macro argument. This enables the use of verbatim or other special material as part of this content. The provided macros have the same names as the original versions but start with an upper-case letter instead. The "long-form" macros, like <code>\Makebox</code>, can also be used as environments, but not the "short-form" macros, like <code>\Mbox</code>. However, normally the long form uses the short form anyway when no optional arguments are used.

5133 *recipebook* – Typeset 5.5” x 8” recipes for browsing or printing

Web page on CTAN	https://ctan.org/pkg/recipebook
name	<i>recipebook</i>
caption	Typeset 5.5” x 8” recipes for browsing or printing
author	Granger, Brad
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	(2015-02-13)
last changes	2015-02-13
year	2015
description	(no language specified) This is a LaTeX2e class for typesetting recipes. It is designed for typesetting one or two recipes per page, with dimensions of 5.5” x 8.5”. The hyperlinked table of contents (ToC) and page numbers make browsing recipes convenient, and the pages can be joined together or printed two per sheet to normal letterpaper easily. The size was chosen to work in half-page 3-ring binder cover sheets.

5153 *register* – Typeset programmable elements in digital hardware (registers)

Web page on CTAN <https://ctan.org/pkg/register>

name	register
caption	Typeset programmable elements in digital hardware (registers)
author	Lovell, Matthew
copyright	Matthew B. Lovell (2001-2020)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.0 (2020-03-22)
last changes	2020-03-22
year	2020
description	(no language specified) This package is designed for typesetting the programmable elements in digital hardware, i.e., registers. Such registers typically have many fields and can be quite wide; they are thus a challenge to typeset in a consistent manner. Register is similar in some aspects to the bytefield and bitpattern packages. Anyone doing hardware documentation using LaTeX should examine those packages. Register requires version 2001/07/25 or newer of the float package. An example Perl module and script are provided, to convert the register specifications into structures suitable for, say, a pre-silicon test environment.

5170 reptheorem – Repetition of theorem environments

Web page on CTAN <https://ctan.org/pkg/reptheorem>

name reptheorem
caption Repetition of theorem environments
author Straat, Jesse
copyright Jesse Straat (2024)
license lpl1.3c = The LaTeX Project Public License 1.3c (free)
version 1.3 (2024-10-07)
last changes 2024-10-07
year 2024
description (no language specified) When writing a large manuscript, it is sometimes beneficial to repeat a theorem (or lemma or...) at an earlier or later point for didactical purposes. However, **thmtools**'s built-in `restatable` only allows replicating theorems *after* they have been stated, and only in the same document.
This package solves the issue by making use of the `.aux` file, and also introduces its own file extension, `.thm`, to replicate theorems in other files.

name required

caption Packages "required" of a LaTeX distribution

author Schmidt, Walter A.

author Rahtz, Sebastian

author The LaTeX Project Team

author Volovich, Vladimir

license lppl = The LaTeX Project Public License (free)

description (no language specified) These are packages that the LaTeX team have declared are 'required' of any LaTeX distribution—in the sense that any package writer is entitled to assume the presence of these packages in support of her package.

The set comprises:

- [AmsLaTeX](#) , mathematical support from the AMS;
- The [babel](#) package for multilingual typesetting;
- Standard LaTeX support for [using Cyrillic alphabet fonts](#) ;
- The standard LaTeX [graphics and colour packages](#) ;
- Basic support for using common Adobe Type 1 fonts with LaTeX—the "[psnfss](#)" ; and
- Basic "LaTeX [latex-tools](#) ".

For distribution details, see the individual packages' catalogue entries.

5175 *resizgather* – Automatically resize overly large equations

Web page on CTAN <https://ctan.org/pkg/resizgather>

name	resizgather
caption	Automatically resize overly large equations
author	Oberdiek, Heiko
copyright	Heiko Oberdiek (2009, 2010)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.3 (2016-05-16)
last changes	2016-05-16
year	2016
description	(no language specified) Equations that are too large are resized to fit the available space. The environment ‘gather’ of package amsmath is supported. Also the environments ‘equation’ and ‘displaymath’ are redefined using ‘gather’ and its starred version. The package is part of the oberdiek bundle.

5183 `retosmatematicos` – LaTeX template for the Telegram group “Retos Matemáticos”

Web page on CTAN	https://ctan.org/pkg/retosmatematicos
name	RetosMatematicos
caption	LaTeX template for the Telegram group “Retos Matemáticos”
author	Díaz Bordón, Henry
author	Muñoz, José Manuel Sánchez
copyright	Henry Díaz Bordón, José Manuel Sánchez Muñoz (2025)
license	cc-by-sa-4 = CC BY-SA 4.0 (free)
version	1.1.1
description	(no language specified) This package provides the class <code>RetoMatematico.cls</code>, which is used to typeset the final solutions of the mathematical challenges published in the Telegram group Retos Matemáticos (by José Manuel Sánchez Muñoz). Among its features, the class sets the document size to letter paper, switches the font to Palatino Linotype (via the <code>mathpazo</code> package), and places information such as the group’s ISSN and link in the page margins. Further details and usage examples are available in the package documentation.
documentation	(Spanish) <i>Example of use (RetoMatematico class)</i>: https://ctan.org/tex-archive/macros/latex/contrib/retosmatematicos/retomatematico-ejemplo.pdf

version	1.3
description	(no language specified) This package combines several other packages and defines additional macros and environments for documenting LaTeX code. The package mainly serves the purpose of combining the preferences used in the author’s own package documentations. However, others can use the package as well. Compatibility between versions cannot be guaranteed, however.

5195 *ribbonproofs* – Drawing ribbon proofs

Web page on CTAN <https://ctan.org/pkg/ribbonproofs>

name	ribbonproofs
caption	Drawing ribbon proofs
author	Wickerson, John
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0
description	(no language specified) The package provides a way to draw "ribbon proofs" in LaTeX. A ribbon proof is a diagrammatic representation of a mathematical proof that a computer program meets its specification. These diagrams are more human-readable, more scalable, and more easily modified than the corresponding textual proofs.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/ribbonproofs/README

last changes	2023-06-12
year	2023
description	(no language specified) The RIT font collection provides versions of ten font families in Malayalam (the language spoken in the southern Indian state of Kerala) script in TrueType and WOFF2 formats. The fonts are:

- RIT Rachana
- RIT Panmana
- RIT MeeraNew
- RIT TN Joy
- RIT Karuna
- RIT Keralayeeam
- RIT Sundar
- RIT Uroob
- RIT Ezhuthu
- RIT Kutty

A LaTeX package `rit-fonts.sty` that will help users to make use of these Unicode-compliant fonts in LaTeX documents with XeTeX or LuaTeX is also provided.

5203 *rmligs* – Remove incorrect ligatures in German documentsWeb page on CTAN <https://ctan.org/pkg/rmligs>

name	rmligs
caption	Remove incorrect ligatures in German documents
author	Jacke, Björn
copyright	Björn Jacke (1999-2002)
license	gpl = GNU General Public License (free)
version	0.84
description	(no language specified) Ligatures, which are a pleasing feature of TeX's use of fonts, should not be placed in German words between the word stem and the rest of the word. The rmligs package is a perl script that takes input in ISO 8859-1 or -15, UTF-8 or LaTeX-style umlaut encodings ("a , "u , etc.), and inserts a break where an inappropriate ligature would appear. So, for example, 'Auflage' will be changed to 'Auf"llage', which typesets in a typographically correct fashion.
documentation	(German) <i>Package README</i>: https://ctan.org/tex-archive/support/rmligs/README
on CTAN	https://ctan.org/tex-archive/support/rmligs
keyword	inputenc (input encoding support for TeX engines)
language(s)	German
year	2002

5204 *rmpage* – A package to help change page layout parameters in LaTeXWeb page on CTAN <https://ctan.org/pkg/rmpage>

name	rmpage
caption	A package to help change page layout parameters in LaTeX
author	McDonnell, Rowland
copyright	R.J.M. McDonnell (1995-1997)
license	gpl = GNU General Public License (free)
version	0.92

5205 *rmthm* – Use a roman font for theorem statements

description	(no language specified) The package lets you change page layout parameters in small steps over a range of values using options. It can set <code>\textwidth</code> appropriately for the main font, and ensure that the text fits inside the printable area of a printer. An <code>rmpage</code> -formatted document can be typeset identically without <code>rmpage</code> after a single cut and paste operation. Local configuration can set defaults: for all documents; and by class, by printer, and by paper size. The <code>geometry</code> package is better if you want to set page layout parameters to particular measurements.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/rmpage/rmpage-doc.pdf

5214 *romanbar* – Write roman number with "bars"

Web page on CTAN <https://ctan.org/pkg/romanbar>

name	<i>romanbar</i>
caption	Write roman number with "bars"
author	Münch, Hans-Martin
copyright	H.-Martin Münch (2011-2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0g
description	(no language specified) ‘Bars’, in the present context, are lines above and below text that abut with the text. Barred roman numerals are sometimes found in publications. The package provides a function that prints barred roman numerals (converting arabic numerals if necessary). The package also provides a predicate <code>\ifnumeric</code>.

5216 romandeadf – Romande ADF fonts and LaTeX support

Web page on CTAN <https://ctan.org/pkg/romandeadf>

name	romandeadf
caption	Romande ADF fonts and LaTeX support
author	Rees, Clea F.
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
license	gpl2 = GNU General Public License, version 2 (free)
version	2.1
description	(no language specified) Romande ADF is a serif font family with oldstyle figures, designed as a substitute for Times, Tiffany or Caslon. The family currently includes upright, italic and small-caps shapes in each of regular and demi-bold weights and an italic script in regular. The support package renames the fonts according to the Karl Berry fontname scheme and defines four families. Two of these primarily provide access to the "standard" or default characters while the "alternate" families support alternate characters, additional ligatures and the long s. The included package files provide access to these features in LaTeX as explained in the documentation. The LaTeX support requires the nfssexst-cfr and the xkeyval packages.

5224 rotating – Rotation tools, including rotated full-page floats

Web page on CTAN <https://ctan.org/pkg/rotating>

name	rotating
caption	Rotation tools, including rotated full-page floats
author	The LaTeX Project Team
author	Fairbairns, Robin
author	Rahtz, Sebastian
copyright	Sebastian Rahtz and Leonor Barroca (1995-1999)
copyright	Robin Fairbairns (2001-2003, 2007-2009)
copyright	LaTeX3 Project (2016-2021)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.16d (2016-08-11)
last changes	2016-08-11
year	2016
description	(no language specified) A package built on the standard LaTeX graphics package to perform all the different sorts of rotation one might like, including complete figures and tables with their captions. If you want continuous text (i.e., more than one page) set in landscape mode, use the lscape package instead. The rotating packages only deals in rotated boxes (or floats, which are themselves boxes), and boxes always stay on one page.

5225 *rotchiffre* – Perform simple rotation cyphers

If you need to use the facilities of the **float** in the same document, load `rotating.sty` via **rotfloat**, which smooths the path between the rotating and float packages.

The package is now part of the **latex-graphics** bundle, which is one of the collections in the **LaTeX ‘required’** set of packages.

documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/required/graphics/rotating.pdf

5226 *rotfloat* – Rotate floats

Web page on CTAN	https://ctan.org/pkg/rotfloat
name	rotfloat
caption	Rotate floats
author	Sommerfeldt, Axel
copyright	Axel Sommerfeldt (1995-2004)
license	lppl = The LaTeX Project Public License (free)
version	1.2
description	(no language specified) The float package provides commands to define new floats of various styles (plain, boxed, ruled, and userdefined ones); the rotating package provides new environments (sidewaysfigure and sidewaysstable) which are rotated by 90 or 270 degrees. But what about new rotated floats, e.g. a rotated ruled one? This package makes this possible; it builds a bridge between the two packages and extends the commands from the float package to define rotated versions of the new floats, too.

5235 **rputover** – Place text over PSTricks objects without obscuring background colors

Web page on CTAN <https://ctan.org/pkg/rputover>

name	rputover
caption	Place text over PSTricks objects without obscuring background colors
author	Osborne, Martin J.
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0 (2017-03-25)

last changes	2017-03-25
year	2017
description	(no language specified) You create a PSTricks figure with regions filled with various colors. You add some lines over the colors. Now you want to add some labels. You'd like these labels to cover the lines but not the background colors. This style provides a way of doing that. The package is now superseded by package pst-rputover by the same author and Thomas Söll

5236 *rrgtrees* – Linguistic tree diagrams for Role and Reference Grammar (RRG) with LaTeX

Web page on CTAN <https://ctan.org/pkg/rrgtrees>

name	RRGtrees
caption	Linguistic tree diagrams for Role and Reference Grammar (RRG) with LaTeX
author	Gardner, David
copyright	D. J. Gardner (2001-2004)
license	lppl = The LaTeX Project Public License (free)
version	1.1

description	(no language specified) A set of LaTeX macros that makes it easy to produce linguistic tree diagrams suitable for Role and Reference Grammar (RRG). This package allows the construction of trees with crossing lines, as is required by this theory for many languages. There is no known limit on number of tree nodes or levels. Requires the pst-node and pst-tree LaTeX packages.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/rrgtrees/rrgtrees.pdf

5240 *rst* – Drawing rhetorical structure analysis diagrams in LaTeX

Web page on CTAN <https://ctan.org/pkg/rst>

name	RST
caption	Drawing rhetorical structure analysis diagrams in LaTeX
author	Reitter, David
license	other-nonfree = License that prevents distribution (not free)
version	1.3

description	(no language specified) This package is of interest for people working in linguistics and language technology. Drawing rhetorical analyses is no fun when you need to change and update diagrams as you refine your work, or, more importantly, if a lot of analyses are to be drawn. Voila, there we go: This package enables us to typeset beautiful diagrams with no hassle. It is oriented towards the style of the diagrams shown in Mann&Thompson's Rhetorical Structure Theory and subsequent works. This package works perfectly with (LaTeX) and pdfLaTeX and does not require any special PostScript capabilities in the output side.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/rst/rst-package.pdf

5244 rtkinenc – Input encoding with fallback procedures

Web page on CTAN <https://ctan.org/pkg/rtkinenc>

name	rtkinenc
caption	Input encoding with fallback procedures
author	Hellström, Lars
license	lppl = The LaTeX Project Public License (free)
version	1.0

description	(no language specified) The <code>rtkinenc</code> package is functionally similar to the standard LaTeX package <code>inputenc</code> : both set up active characters so that an input character outside the range of 7-bit visible ASCII is converted into one or more corresponding LaTeX commands. The main difference lies in that <code>rtkinenc</code> allows the user to specify a fallback procedure to use when the text command corresponding to some input character isn't available. Names of commands in <code>rtkinenc</code> have been selected so that it can read <code>inputenc</code> encoding definition files, and the aim is that <code>rtkinenc</code> should be backwards compatible with <code>inputenc</code>. <code>rtkinenc</code> is not a new version of <code>inputenc</code> though, nor is it part of standard LaTeX. For an example of how <code>rtkinenc</code> is used, the user may look at the <code>tcldoc</code> class.
documentation	(no language specified) <i>Package documentation</i>: https://ctan.org/tex-archive/macros/latex/contrib/rtkinenc/rtkinenc-doc.pdf

copyright	Haim Bar and HaiYing Wang (2020-2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.4

description	(no language specified) This LaTeX package executes programming source codes (including all command line tools) from within LaTeX and embeds the output in the resulting .pdf file. Many programming languages can be easily used and any command-line executable can be invoked when preparing the .pdf file from a .tex file. It is however recommended to use this package in server-mode together with the Python talk2stat package. Currently, this server-mode supports Julia, MatLab, Python, and R. More languages will be added. For more details and usage examples, refer to the package's github repository .

5263 *runtexshebang* – A Lua script running LaTeX document files with TeX-style shebang

Web page on CTAN <https://ctan.org/pkg/runtexshebang>

name	runtexshebang
caption	A Lua script running LaTeX document files with TeX-style shebang
author	Yamamoto, Munehiro
copyright	Munehiro Yamamoto (2021-2023)
license	mit = MIT License (free)
version	0.5 (2023-11-17)
last changes	2023-11-17
year	2023
description	(no language specified) In short, a TeX-style shebang (<code>%#!</code>) is a special kind of TeX comment that you include in your TeX/LaTeX document file to tell the operating system's shell how to run the file for the rest of the file:

5264 *ruscap* – A Metafont for rustic capitals

```
%#!lualatex foo.tex
\documentclass{article}
\begin{document}
Hello, {\LaTeX} World!

Happy {\TeX}ing.
\end{document}
```

If you are using a TeX-style shebang, it must appear on the line that matched 20 lines or less in your LaTeX document, and it has to start with a TeX comment symbol (%) followed by a hash sign (#) and an exclamation mark (!), colloquially known as the bang, hence the name shebang for TeX/LaTeX.

5270 `rvwrite` – Increase the number of available output streams in LaTeX

version	1.0
description	(no language specified) Package <code>graphicx</code> provides a useful keyword <code>viewport</code> which allows to show just a part of an image. However, one needs to put there the actual coordinates of the viewport window. Sometimes it is useful to have relative coordinates as fractions of natural size. For example, one may want to print a large image on a spread, putting a half on a verso page, and another half on the next recto page. For this one would need a viewport occupying exactly one half of the file's bounding box, whatever the actual width of the image may be. This package adds a new keyword <code>rviewport</code> to the <code>graphicx</code> package specifying Relative Viewport for graphics inclusion: a window defined by the given fractions of the natural width and height of the image.

5270 `rvwrite` – Increase the number of available output streams in LaTeX

Web page on CTAN <https://ctan.org/pkg/rvwrite>

name	<code>rvwrite</code>
caption	Increase the number of available output streams in LaTeX
author	Radhakrishnan, C. V.
copyright	C. V. Radhakrishnan (2010)
license	lppl = The LaTeX Project Public License (free)
version	1.2

description	(no language specified) The package addresses, for LaTeX documents, the severe limitation on the number of output streams that TeX provides. The package uses a single TeX output stream, and writes "marked-up" output to this stream. The user may then post-process the marked-up output file, using LaTeX, and the document's output appears as separate files, according to the calls made to the package. The output to be post-processed uses macros from the widely-available ProTeX package.

5281 *sam2p* – Convert bitmap formats to compact PS/PDF

Web page on CTAN <https://ctan.org/pkg/sam2p>

name	<code>sam2p</code>
caption	Convert bitmap formats to compact PS/PDF
author	Szabó, Péter
license	gpl = GNU General Public License (free)
version	0.49.4

description	(no language specified) Sam2p is a UNIX command line utility written in ANSI C++ that converts many raster (bitmap) image formats into Adobe PostScript or PDF files and several other formats. The images are not vectorized. sam2p gives full control to the user to specify standards-compliance, compression, and bit depths. In some cases sam2p can compress an image 100 times smaller than the PostScript output of many other common image converters. Sam2p provides ZIP, RLE and LZW (de)compression filters even on output destined for PostScript Level 1 devices. The author provides a script bundle, a2ping , that uses sam2p as part of a generic format conversion mechanism.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/graphics/sam2p/README
contact	<i>bugs</i> : https://github.com/pts/sam2p/issues
contact	<i>repository</i> : https://github.com/pts/sam2p

5293 sarabian – Archaic South Arabian script font

Web page on CTAN <https://ctan.org/pkg/sarabian>

name	sarabian
caption	Archaic South Arabian script font
author	Stanier, Alan
author	Wilson, Peter R.
copyright	Peter R. Wilson (1999-2005)
license	lppl = The LaTeX Project Public License (free)
version	1.0
description	(no language specified) The sarabian bundle provides PostScript Type 1 fonts for the South Arabian script which was in use for about 1000 years from roughly 600BC. The original glyphs were the work of Alan Stanier . This is one of a series of fonts reproducing ancient scripts.

5301 *savetrees* – Optimise the use of each page of a LaTeX document

Web page on CTAN <https://ctan.org/pkg/savetrees>

name	savetrees
caption	Optimise the use of each page of a LaTeX document
author	Pakin, Scott
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.4 (2016-04-14)
last changes	2016-04-14
year	2016
description	(no language specified) The goal of the <i>savetrees</i> package is to pack as much text as possible onto each page of a LaTeX document. Admittedly, this makes the document far less attractive. Nevertheless, <i>savetrees</i> is a simple way to save paper when printing draft copies of a document. It can also be useful when trying to meet a tight page-length requirement for a conference or journal submission. Most of the package options cover specific modifications to typesetting rules, but there are also options <code>subtle</code>, <code>moderate</code> and <code>extreme</code> options for the "broad brush" approach.

5313 *scalere1* – Constrained scaling and stretching of objects

Web page on CTAN <https://ctan.org/pkg/scalere1>

name	scalere1
caption	Constrained scaling and stretching of objects
author	Segletes, Steven B.
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.8 (2016-12-29)
last changes	2016-12-29
year	2016
description	(no language specified) The package provides four commands for vertically scaling and stretching objects. Its primary function is the ability to scale/stretch and shift one object to conform to the size of a specified second object. This feature can be useful in both equations and schematic diagrams. Additionally, the scaling and stretching commands offer constraints on maximum width and/or minimum aspect ratio, which are often used to preserve legibility or for the sake of general appearance.

5316 *schedule* – Weekly schedules

Web page on CTAN <https://ctan.org/pkg/schedule>

name	<code>schedule</code>
caption	Weekly schedules
author	Alexander, Jason
author	Deneault, Ethan
copyright	Jason Alexander (1997-2001)
copyright	Ethan Deneault (2019)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.20 (2019-07-31)
last changes	2019-07-31
year	2019
description	(no language specified) Automatically format weekly schedules using LaTeX's picture environment. It requires the packages <code>calc</code> and <code>color</code> . Its main feature is the accuracy with which appointments are represented: boxes drawn to represent a particular appointment are accurate to the minute — i.e., a 31-minute appointment will have a box 1/30th longer than a 30-minute appointment. A number of features are included to allow the user to customize the output.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/schedule/README.md
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/schedule/schedule.pdf

caption	Mark research contributions in scientific documents and embed them in PDF metadata
author	Bless, Christof
copyright	Christof Bless (2022)
license	mit = MIT License (free)
version	2.2.0 (2023-04-03)
last changes	2023-04-03
year	2023
description	(no language specified) Scientific Knowledge Graph TeX (SciKgTeX) is a LuaLaTeX package which makes it possible to annotate specific research contributions in scientific documents. SciKGT _E X will enrich the document by adding the marked contributions to PDF metadata in a structured XMP format which can be picked up by search engines and knowledge graphs.

5335 sciposter – Make posters of ISO A3 size and largerWeb page on CTAN <https://ctan.org/pkg/sciposter>

name	sciposter
caption	Make posters of ISO A3 size and larger
author	Wilkinson, Michael
license	lppl = The LaTeX Project Public License (free)
version	1.18
description	(no language specified) This collection of files contains LaTeX packages for posters of ISO A3 size and larger (ISO A0 is the default size). American paper sizes and custom paper are supported. In particular, <code>sciposter.cls</code> defines a document class which allows cutting and pasting most of an article to a poster without any editing (save reducing the size) — see the manual. Sciposter does work for LaTeX, not just pdfLaTeX. However, <code>xdvi</code> produces strange results, though a recent version of <code>dvips</code> does create good ps-files from the dvi files. Also note that logos must either be put in the current working directory or in the directories of your LaTeX distribution. For some reason <code>graphicspath</code> settings are ignored.

5343 *scrambledenvs* – Create and print scrambled environments

Web page on CTAN	https://ctan.org/pkg/scrambledenvs
name	<code>scrambledenvs</code>
caption	Create and print scrambled environments
author	Chen, Dennis
copyright	Dennis Chen (2021)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.1.0 (2021-09-26)

last changes	2021-09-26
year	2021
description	(no language specified) This package allows you to create and print scrambled environments for purposes such as randomized hint environments. You can mark a location with a series of hints, and then print the hints at the end in a pseudo-random order. The general structure follows: there is an outer environment which creates the label, an inner environment that creates the references, and a print command that prints out all of the hints. This generalizes beyond hints; one can create scrambled solutions as well, etc.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/scrambledenvs/README.md

name	scrhack
caption	Compatibility package to emulate the former KOMA-Script package scrhack
author	Kohm, Markus
copyright	Markus Kohm (2008-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	3.42 (2024-09-04)
last changes	2024-09-04

year	2024
description	(no language specified) Up to version 3.41, the scrhack package was part of KOMA-Script . It was originally intended to improve the compatibility of third-party packages with KOMA-Script. However, most of the so-called hacks also added additional functionality to the corresponding third-party package. On the other hand, it was sometimes urgent to react to a change in such a third-party package, which was difficult to do from within a large collection like KOMA-Script. Therefore, the scrhack part of KOMA-Script was split into several independent packages. And the scrhack spin-off was made to emulate the former KOMA-Script package of the same name.

5390 sectionbreak – LaTeX support for section breaks

Web page on CTAN <https://ctan.org/pkg/sectionbreak>

name	sectionbreak
caption	LaTeX support for section breaks
author	Hoftich, Michal
copyright	Michal Hoftich (2017-2018)

license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.1d (2019-03-11)
last changes	2019-03-11
year	2019
description	(no language specified) This package provides LaTeX support for section breaks, used mainly in fiction books to signal changes in a story, like changes in time, location, etc. It supports the asterism symbol, text content, or custom macros as the section break mark symbol.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/sectionbreak/sectionbreak-doc.pdf
– local file	<code>./7957255358-sectionbreak-doc.pdf</code>

5397 *selsnolig* – Selectively disable typographic ligatures

Web page on CTAN <https://ctan.org/pkg/selsnolig>

name	<code>selsnolig</code>
caption	Selectively disable typographic ligatures
author	Loretan, Mico
copyright	Mico Loretan (2013-2015)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.302 (2015-10-26)
last changes	2015-10-26
year	2015
description	(no language specified) The package suppresses typographic ligatures selectively, i.e., based on predefined search patterns. The search patterns focus on ligatures deemed inappropriate because they span morpheme boundaries. For example, the word <code>shelfful</code>, which is mentioned in the TeXbook as a word for which the <code>ff</code> ligature might be inappropriate, is automatically typeset as <code>shelf\ful</code> rather than as <code>shelf{ff}ul</code>. For English and German language documents, the package provides extensive rules for the selective suppression of so-called "common" ligatures. These comprise the <code>ff</code>, <code>fi</code>, <code>fl</code>, <code>ffi</code>, and <code>ffl</code> ligatures as well as the <code>ft</code> and <code>fft</code> ligatures. Other f-ligatures, such as <code>fb</code>, <code>fh</code>, <code>fj</code> and <code>fk</code>, are suppressed globally, while exceptions are made for names and words of non-English/German origin, such as <code>Kafka</code> and <code>fjord</code>. For English language documents, the package further provides ligature suppression macros for a number of so-called "discretionary" or "rare" ligatures such as <code>ct</code>, <code>st</code>, and <code>sp</code>. The package requires use of a recent LuaLaTeX format (for example those from TeX Live 2012 or 2013, or MiKTeX 2.9).
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/luatex/latex/selsnolig/selsnolig.pdf

5398 *semantex* – Semantic, keyval-based mathematics

Web page on CTAN <https://ctan.org/pkg/semantex>

name	SemanTeX
caption	Semantic, keyval-based mathematics
author	Ørsted, Sebastian
copyright	Sebastian Ørsted (2020-2023)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.525 (2023-01-23)
last changes	2023-01-23
year	2023
description	(no language specified) The SemaTeX package for LaTeX delivers a more semantic, systematized way of writing mathematics, compared to the classical math syntax in LaTeX. The system uses keyval syntax, and the user can define their own keys and customize the system down to the last detail. At the same time, care has been taken to make the syntax as simple, natural, practical, and lightweight as possible. Furthermore, the package has a companion package, called stripsemantex, which allows you to completely strip your documents of SemaTeX markup to prepare them e.g. for publication. The package is still in beta, but is considered feature-complete and more or less stable, so using it at this point should be safe. Still, suggestions, ideas, and bug reports are more than welcome!

---------	--

version	(2020-01-29)
---------	--------------

last changes	2020-01-29
--------------	------------

year	2020
------	------

description	(no language specified) The package provides simple commands to allow authors (especially scholars in the humanities) to write with a focus on content rather than presentation. The commands are inspired by the XML elements of the Text Encoding Initiative. Commands like <code>\term</code> and <code>\foreign</code> are aliases for <code>\emph</code>. <code>\quoted</code> and <code>\soCalled</code> are aliases for quoting commands. These commands could be easily redefined for different formats.
-------------	--

The package also provides a footnote environment so that long footnotes can be more cleanly separated from the main text.

Because the author is a music scholar, the package also includes some macros for musical symbols and other basic notations for musical analysis.

version 0.45 (2020-10-03)

last changes 2020-10-03

year 2020

description (no language specified) This package is a small LaTeX package that adds a collection of simple macros for parentheses and bullets. It exists for one purpose only: To be loaded by documents which were originally typeset using the package **SemanTeX**, but which have been stripped of *SemanTeX* markup using the package `stripsemanTeX` which is part of **SemanTeX**. Therefore, unless your document is one of those, simply **don't use this package**.

And even if your document is one of those, there is a good chance you will not have to load it after all. In most cases, you will be able to replace the macros it provides by macros from other packages.

5410 *sepfootnotes* – Support footnotes and endnotes from separate files

Web page on CTAN <https://ctan.org/pkg/sepfootnotes>

name	sepfootnotes
caption	Support footnotes and endnotes from separate files
author	Lourenço de Lima, Eduardo C.
copyright	Eduardo C. Lourenço de Lima (2013-2024)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.3d (2024-07-05)
last changes	2024-07-05
year	2024
description	(no language specified) The package supports footnotes and endnotes from separate files. This is achieved with commands <code>\sepfootnotecontent</code> and <code>\sepfootnote</code> ; the former defines the content of a note, while the latter typesets that note.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/sepfootnotes/sepfootnotes.pdf

5411 *sepnum* – Print numbers in a "friendly" format

Web page on CTAN <https://ctan.org/pkg/sepnum>

name *sepnum*
caption Print numbers in a "friendly" format
author Raichle, Bernd
copyright Bernd Raichle (1995, 1996, 2001)
license lpl = The LaTeX Project Public License (free)
version 2.0
description (no language specified) Provides a command to print a number with (potentially different) separators every three digits in the parts either side of the decimal point (the point itself is also configurable). The macro is fully expandable and not fragile (unless one of the separators is). There is also a command `\sepnumform`, that may be used when defining `\the<counter>` macros.
documentation (no language specified) *Package documentation*: <https://ctan.org/tex-archive/macros/latex/contrib/sepnum/sepnum-doc.pdf>

5412 seqcalc – A package for declarative sequent-calculus proofsWeb page on CTAN <https://ctan.org/pkg/seqcalc>

name	seqcalc
caption	A package for declarative sequent-calculus proofs
author	Julian
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0 (2026-01-31)
last changes	2026-01-31
year	2026
description	(no language specified) This package provides a structured wrapper around the bussproofs package. It provides a declarative interface for sequent calculus proofs, including rule declaration, rule application, formula normalization, shortcuts, and optional standard rule sets. The goal is to simplify the construction of proof trees while keeping the underlying bussproofs layout untouched.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/seqcalc/README.md
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/seqcalc/doc/seqcalc-doc.pdf

5413 seqsplit – Split long sequences of characters in a neutral wayWeb page on CTAN <https://ctan.org/pkg/seqsplit>

name	seqsplit
caption	Split long sequences of characters in a neutral way
author	Veytsman, Boris
copyright	Boris Veytsman (2006)
license	lppl = The LaTeX Project Public License (free)
version	0.1
description	(no language specified) When one needs to type long sequences of letters (such as in base-sequences in genes) or of numbers (such as calculations of transcendental numbers), there's no obvious break points to be found. The package provides a command <code>\seqsplit</code>, which makes its argument splittable anywhere, and then leaves the TeX paragraph-maker to do the splitting. While the package may obviously be used to typeset DNA sequences, the user may consider the dnaseq as a rather more powerful alternative.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/seqsplit/seqsplit.pdf

5429 `settosize` – Scale text to given width

Web page on CTAN <https://ctan.org/pkg/settosize>

name	<code>settosize</code>
caption	Scale text to given width
author	Taylor, Philip
license	<code>noinfo = noinfo</code>
version	(1993-02-04)
last changes	1993-02-04
year	1993
description	(no language specified) The package defines a command

```
\set <text> \in <font> \to <size>
```

that chooses the "best" magstep that will fit the given text into the width, and typesets the text accordingly.

on CTAN	https://ctan.org/tex-archive/macros/plain/contrib/misc/settosize.tex
---------	---

5430 *settosize-ltx* – Scale text to make it fit a given width

keyword	font-sel (font selection schemes)
language(s)	no language specified
last access	2025-02-07

5430 *settosize-ltx* – Scale text to make it fit a given width

Web page on CTAN <https://ctan.org/pkg/settosize-ltx>

name	settosize-ltx
caption	Scale text to make it fit a given width
author	Rahtz, Sebastian
license	noinfo = noinfo
version	(1993-02-18)
last changes	1993-02-18
year	1993
description	(no language specified) The command <code>\scaleto</code> decides on a scale for the current font such that the text will fit the given width. This package is an adaptation for LaTeX of the settosize package for plain TeX; it is now superseded by textfit , which is a development for current LaTeX.
on CTAN	https://ctan.org/tex-archive/macros/latex209/contrib/misc/settosize.sty
keyword	latex209 (package only known to work with LaTeX 2.09)

5443 *sgame* – LaTeX style for typesetting strategic games

Web page on CTAN <https://ctan.org/pkg/sgame>

name *sgame*
caption LaTeX style for typesetting strategic games
author Osborne, Martin J.
license lppl = The LaTeX Project Public License (free)
version 2.15
description (no language specified) Formats strategic games. For a 2x2 game, for example, the input:

5444 `sgmlcmpt` – Support for LaTeX formulae as SGML PCDATA

```
\begin{game}{2}{2}
&$L$ &$M$\\
$T$ &$2, 2$ &$2, 0$\\
$B$ &$3, 0$ &$0, 9$
\end{game}
```

produces output with (a) boxes around the payoffs, (b) payoff columns of equal width, and (c) payoffs vertically centered within the boxes.

Note that the game environment will not work in the argument of another command.

5448 *shadethm* – Theorem environments that are shaded

Web page on CTAN <https://ctan.org/pkg/shadethm>

name	Shaded theorems
caption	Theorem environments that are shaded
author	Hefferon, Jim
copyright	Jim Hefferon (1999-2020)
license	lppl = The LaTeX Project Public License (free)
version	(2020-01-08)
last changes	2020-01-08
year	2020
description	(no language specified) Extends the <code>\newtheorem</code> command. If you say <code>\newshadetheorem{theorem}{Theorem}</code> in the preamble then your regular <code>\begin{theorem} .. \end{theorem}</code> will produce a theorem statement in a shaded box. It supports all the options of <code>\newtheorem</code>, including forms <code>\newshadetheorem{..}[..]{..}</code> and <code>\newshadetheorem{..}{..}[..]</code>. Environments declared using the package require their body to remain on one page; the <i>mdframed</i> package can frame and shade theorems, and <i>its</i> environments break at the end of a page; users are generally recommended, therefore, to use <i>mdframed</i>.

In the same spirit, the author told us in January 2020: "These materials are obsolete. There are a number of more recent, more powerful packages that have capabilities that greatly extend the simple ones here. A new project should use one of those. These files only continue to be available to help people who are working with an old project."

5453 shapepar – A macro to typeset paragraphs in specific shapesWeb page on CTAN <https://ctan.org/pkg/shapepar>

name	shapepar
caption	A macro to typeset paragraphs in specific shapes
author	Arseneau, Donald
copyright	Donald Arseneau (1993, 2002, 2006)
license	other-free = Free license not otherwise listed (free)
version	2.2
description	(no language specified) <code>\shapepar</code> is a macro to typeset paragraphs in a specific shape. The size is adjusted automatically so that the entire shape is filled with text. There may not be displayed maths or ‘<code>\vadjust</code>’ material (no <code>\vspace</code>) in the argument of <code>\shapepar</code>. The macros work for both LaTeX and plain TeX. For LaTeX, specify <code>\usepackage{shapepar}</code>; for Plain, <code>\input shapepar.sty</code>. <code>\shapepar</code> works in terms of user-defined shapes, though the package does provide some predefined shapes: so you can form any paragraph into the form of a heart by putting <code>\heartpar{sometext...}</code> inside your document. The tedium of creating these polygon definitions may be alleviated by using the shapepatch extension to transfig which will convert xfig output to <code>\shapepar</code> polygon form.
documentation	(no language specified) <i>Package README</i>: https://ctan.org/tex-archive/macros/latex/contrib/shapepar/README.shapepar
documentation	(no language specified) <i>Package documentation</i>: https://ctan.org/tex-archive/macros/latex/contrib/shapepar/shapepar.pdf

keyword	micro-layout (paragraph shapes, margin adjustments, etc.)
language(s)	no language specified
year	2006

last access 2025-02-07

5454 *shapepatch* – Transfig patch supporting shapepar

Web page on CTAN <https://ctan.org/pkg/shapepatch>

name	shapepatch
caption	Transfig patch supporting shapepar
author	Gollwitzer, Christian
license	bsd = BSD Style License (free)
version	1.1
description	(no language specified) ShapePatch is a patch against Transfig , which adds the capability to export XFig figures to shape definitions for shapepar . Shapepar itself will form a paragraph into a specified shape, and the size of the shape is automatically adjusted so that the given paragraph completely fills the shape. ShapePatch effort: one simply draws the required shape with XFig and then convert it to a shape definition for shapepar, either by calling fig2dev manually or by choosing "Export/Shape" in XFig (if you install the additional XFig patch).

5457 *shavian* – A Shavian spelling alphabet font

description	(no language specified) This package provides a robust and flexible solution for typesetting shared lines in dramatic verse, such as in the plays of Shakespeare. It allows a single line of verse to be split across multiple speakers while maintaining perfect horizontal alignment, creating the visual effect of a single, continuous line of iambic pentameter.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/sharedline/README.md

5460 *shhyph1* – Serbo-Croatian hyphenation (Latin alphabet)

Web page on CTAN <https://ctan.org/pkg/shhyph1>

name	shhyph1
caption	Serbo-Croatian hyphenation (Latin alphabet)
author	Muhamedagić, Dejan
copyright	Dejan Muhamedagić (1990, 1998)
license	nocommercial = No Commercial Use (not free)
description	(no language specified) Serbo-Croatian may be written in either Cyrillic or Latin alphabets. These patterns deal with Latin-alphabet writing.
on CTAN	https://ctan.org/tex-archive/language/hyphenation/shhyph1.tex
keyword	hyphenation (macros or tables for hyphenation)
keyword	serbian (documentation in, and support for typesetting Serbian)
language(s)	no language specified
year	1998
last access	2025-02-07

5461 *shipunov* – A collection of LaTeX packages and classes

Web page on CTAN <https://ctan.org/pkg/shipunov>

name	shipunov
caption	A collection of LaTeX packages and classes
author	Shipunov, Alexey
copyright	Alexey Shipunov (2010-2019)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.2
description	(no language specified) The bundle collects packages and classes, along with one bibliography style and examples and scripts for converting TeX files. Many of the files in the collection are designed to support field biologists and/or Russian writers, while others have wider application. The collection includes: • add2 – Save trees. Quick way to fit as many as possible into one page. Good for handouts.

- **altverse** – Typesetting verses. Straightforward typesetting, using the **xtab** package to aid layout.
- **autolist** – More lists. A means to define various sorts of list.
- **biokey** – Flexible identification key tables in LaTeX. The package provides straightforward macros to typeset sets of biological identification keys. Layout is flexible, and the macros will be useful in other disciplines.
- **biolist** – List observed species. Pretty formatting of species lists of flora and fauna.
- **boldline** – Heavier lines in tables. The package provides commands replacing `\hline` and `\cline`, as well as a table preamble element that generates heavy lines.
- **cassete** (with one ‘t’) – Print labels for audio cassettes. This is a LaTeX2e class file (the only other cassette package on CTAN is **cassette** (with two ‘t’), written for Plain TeX).
- **classif2** – Biological classification tables. The package defines an environment `classif` that simplifies the process of typesetting classification tables.
- **dline** – Double line on the left of text.
- **drocaps** – Simple dropped capitals. The package offers simple macros for dropped capitals, in a couple of forms.
- **etiketka** – Class for typesetting business-card-sized information (including business cards).
- **flower** – Typesetting lists of flower formulas.
- **isyntax** – Interactively check LaTeX file syntax.
- **numerus** – Spell numbers in Russian words.
- **punct** – Within italicized text, punctuation is still straight, this is typographically more aesthetic.
- **qqru** – Universal quotation marks, for Russian and English. It is able also to convert uniform typewriter ”quotes” into left or right typographic quotes.
- **rusnat** – Bibliography style file, now deprecated.
- **sltables** – Simplified tables for LaTeX. These macros develop the concepts of the `stables`, which are designed to offer table macros whose use is ”as simple as one might hope”. Some would claim that LaTeX’s built-in table specifications are as simple as one might hope, but this package offers many short-cuts and optimization of the mechanisms of tables.
- **starfn** – Stars as footnote marks.
- **textfrac** – Simple slanted fractions.

5462 *shlatex* – *LaTeX* compilation script for Linux (written in Bash)

5462 *shlatex* – *LaTeX* compilation script for Linux (written in Bash)

Web page on CTAN <https://ctan.org/pkg/shlatex>

name	shlatex
caption	LaTeX compilation script for Linux (written in Bash)
author	Hilléreau, Mael
license	gpl = GNU General Public License (free)
version	1.2b
description	(no language specified) This script permits centralization of the many program calls necessary to completely compile a LaTeX document. In particular, the multiple calls of the LaTeX command necessary in order to create a table of contents, a bibliography or an index are carried out automatically. Are also managed the calls of the programs BibTeX and makeindex as well as the vizualisation of the resulting file (in DVI, PostScript or PDF format) by calling an external program. It is possible to stress characters in documents wich use the \input and \include commands to make references to some external files, and that in a transparent way by compiling only the main source file. Available in English and French languages.

5463 shobhika – An OpenType Devanāgarī font designed for scholars

Web page on CTAN <https://ctan.org/pkg/shobhika>

name shobhika

caption An OpenType Devanāgarī font designed for scholars

author Kolachana, Aditya

license ofl = The SIL Open Font License (free)

version 1.05

description (no language specified) This package provides a free, open source, Unicode compliant, OpenType font with support for Devanāgarī, Latin, and Cyrillic scripts. It is available in two weights—regular and bold. The font is designed with over 1600 Devanāgarī glyphs, including support for over 1100 conjunct consonants, as well as vedic accents.

The Latin component of the font not only supports a wide range of characters required for Roman transliteration of Sanskrit, but also provides a subset of regularly used mathematical symbols for scholars working with scientific and technical documents.

The project has been launched under the auspices of the Science and Heritage Initiative (SandHI) at [IIT Bombay](#), and builds upon the following two fonts for its Devanāgarī and Latin components respectively: (i) [Yashomudra](#) by [Rājya Marāṭhī Vikās Saṁsthā](#), and (ii) [PT Serif](#) by [ParaType](#). We would like to thank both these organisations for releasing their fonts under the SIL Open Font Licence, which has enabled us to create Shobhika.

language(s)	no language specified
last access	2025-02-07

5476 *showhyphenation* – Marking of hyphenation points

Web page on CTAN <https://ctan.org/pkg/showhyphenation>

name	showhyphenation
caption	Marking of hyphenation points
author	Kelkel, Thomas
copyright	Thomas Kelkel (2022-2023)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.3 (2023-07-08)
last changes	2023-07-08
year	2023

description	(no language specified) The package shows the hyphenation points in the document by either inserting small triangles below the baseline or by typesetting explicit hyphens. The markers are correctly placed even within ligatures and their size adjusts to the font size. By option the markers can be placed behind or in front of the glyphs. The package requires LuaLaTeX.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/luatex/latex/showhyphenation/README.md

5479 *showkeys* – Show label, ref, cite and bib keys

Web page on CTAN	https://ctan.org/pkg/showkeys
name	showkeys
caption	Show label, ref, cite and bib keys
author	Carlisle, David
copyright	LaTeX3 Project et al. (1993-2023)
copyright	David Carlisle, LaTeX3 Project (2006-2022)
copyright	David Carlisle (1992-1997)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	3.21 (2024-05-23)
last changes	2024-05-23
year	2024

description	(no language specified) The <code>showkeys</code> package modifies the <code>\label</code> , <code>\ref</code> , <code>\pageref</code> , <code>\cite</code> and <code>\bibitem</code> commands so that the ‘internal’ key is printed, without affecting the appearance of the rest of the text, so far as is possible (the keys typically appear in the margin). The package is part of the latex-tools bundle in the LaTeX required distribution.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/required/tools/showkeys.pdf
– local file	<code>./8139976188-showkeys.pdf</code>

5480 `showlabels` – Show label commands in the margin

Web page on CTAN <https://ctan.org/pkg/showlabels>

name	<code>showlabels</code>
caption	Show label commands in the margin
author	Gray, Norman
copyright	Norman Gray (1999, 2001-2009, 2013-2022)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.9.2
description	(no language specified) This package helps you keep track of all the labels you define, by putting the name of new labels into the margin whenever the <code>\label</code> command is used. The package allows you to do the same thing for other commands. The only one for which this is obviously useful is the <code>\cite</code> command, but it’s easy to do it for others, such as the <code>\ref</code> or <code>\begin</code> commands.

5481 *showtags* – Print the tags of bibliography entries

documentation	(no language specified) <i>Package documentation (PDF)</i> : https://ctan.org/tex-archive/macros/latex/contrib/showlabels/showlabels.pdf

5490 ***sidenotesplus* – Place referenced notes, alerts, figures and tables into the document margin**

Web page on CTAN <https://ctan.org/pkg/sidenotesplus>

name	<code>sidenotesplus</code>
caption	Place referenced notes, alerts, figures and tables into the document margin
author	Vrba, Anton
copyright	Anton Vrba (2022-2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.05 (2025-02-18)
last changes	2025-02-18
year	2025
description	(no language specified) Sidenotesplus is a comprehensive package for placing labeled or referenced notes, temporary alerts, bibliography references, figures and tables into the margin. Marginals can be either floated or at fixed positions relative to the text. Twoside symmetry is preserved. For BibLaTeX users, macros for side references are provided. Three margin styles are provided. Two-page symmetric layouts either as (i) Ragged outer with note reverences in the margin separator or (ii) justified with last line ragged outer. And (iii) a classic look, justified with last line ragged right and note reference to the left of the note, but two-page symmetry is lost. The command <code>\sidenote</code> mimics the <code>\footnote</code> command and provides labelled (numbers, alphabetic, roman) references. However, un-numbered and custom symbols can also be specified. Temporary sidealerts are rendered only if the package option <code>alerton</code> is specified. Alerts are useful as to do reminders during document development. Furthermore, captions for figures and tables can also be placed into margin. Also, full width environments for figures, tables and text are provided. The text environment can be partially widened, suitable if that extra space for an equation is required.

description	(no language specified) The package allows the user to filter out unwanted warnings and error messages issued by LaTeX, packages and classes, so they won't pop out when there's nothing one can do about them. Filtering goes from the very broad ("avoid all messages by such and such") to the fine-grained ("avoid messages that begin with..."). Messages may be saved to an external file for later reference.

author	Lee, Jay
copyright	Jay Lee (2019-2023)
license	mit = MIT License (free)
version	1.0.0 (2023-11-25)
last changes	2023-11-25
year	2023
description	(no language specified) This package provides a simple way for typesetting grammars in Backus-Naur form (BNF). The included <code>bnf</code> environment parses BNF expressions (possibly annotated), so users can write readable BNF expressions in their documents. It features a flexible configuration system, allowing for the customization of the domain-specific language (DSL) used in typesetting the grammar. Additionally, the package comes with sensible defaults. The package requires <code>expl3</code> , <code>xparse</code> , <code>mathtools</code> , and <code>tabularray</code> .

Web page on CTAN <https://ctan.org/pkg/simplenodes>

name	simplenodes
caption	Simple nodes in four colors written in TikZ for LaTeX
author	Vergauwen, Bob
copyright	Bob Vergauwen (2022)
license	mit = MIT License (free)
version	(2022-03-31)
last changes	2022-03-31
year	2022
description	(no language specified) This is a LaTeX macro package for generating simple node-based flow graphs or diagrams built upon the TikZ package. The package provides two basic commands, one to generate a node and one to create links between nodes. The positioning of the nodes is not handled by the package itself but is preferably done in a tabular environment. In total, four simple node types are defined, loosely based on the nomenclature and color patterns of the popular Java script Bootstrap.

5508 simpler-wick – Simpler Wick contractions

Web page on CTAN <https://ctan.org/pkg/simpler-wick>

name simpler-wick

caption Simpler Wick contractions

author Ellis, Joshua

copyright Joshua Ellis (2014-2015)

license lpl1.3 = The LaTeX Project Public License 1.3 (free)

version 1.0.0 (2015-12-11)

last changes 2015-12-11

year 2015

description (no language specified) In every quantum field theory course, there will be a chapter about Wick's theorem and how it can be used to convert a very large product of many creation and annihilation operators into something more tractable and normal ordered.

The contractions are denoted with a square bracket over the operators which are being contracted, which used to be rather annoying to typeset in LaTeX as the only other package available was [simplewick](#), which is rather unwieldy.

This package provides a simpler syntax for Wick contractions.

5510 **simplesystemtex** – An automated file & block management system for large-scale LaTeX

Web page on CTAN <https://ctan.org/pkg/simplesystemtex>

name SimpleSystemTeX
caption An automated file & block management system for large-scale LaTeX
author Zhou, KeXin
license lpl1.3c = The LaTeX Project Public License 1.3c (free)
version 1.0.0 (2026-03-24)
last changes 2026-03-24
year 2026
description (no language specified) This LaTeX3 package has been specifically designed for large-scale, integrated typesetting tasks such as books, theses, or extensive lecture notes.

The core design philosophy of this package is to maximize the separation of content and structure. It provides an automated file and block management system that frees content creators from constantly managing global document structure and stylistic details.

Key features include:

- Automated subfile management: Section files are automatically added to the TOC upon import.
- A flexible Block System for theorems, definitions, and proofs.
- Dynamic cross-referencing that generates and manages anchors automatically.
- Automated generation of block indexes (e.g., List of Theorems).
- Highly customizable styling via dynamic display arguments and conditional statements.

year	2024
description	(no language specified) This package provides a LaTeX class for typesetting books with a simple and clear design. Currently, it has native support for Chinese (simplified and traditional), English, French, German, Italian, Japanese, Portuguese (European and Brazilian), Russian and Spanish typesetting. It compiles with either XeLaTeX or LuaLaTeX. This is part of the minimalist class series and depends on <code>minimalist.sty</code> from the minimalist package. The package name "simplivre" is taken from the French words "simple" and "livre" (= "book").

5523 *siunitx* – A comprehensive (SI) units package

Web page on CTAN <https://ctan.org/pkg/siunitx>

name	siunitx
caption	A comprehensive (SI) units package
author	Wright, Joseph
copyright	Joseph Wright (2008-2026)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	3.5.4 (2026-04-15)
last changes	2026-04-15
year	2026
description	(no language specified) Physical quantities have both numbers and units, and each physical quantity should be expressed as the product of a number and a unit. Typesetting physical quantities requires care to ensure that the combined mathematical meaning of the number-unit combination is clear. In particular, the SI units system lays down a consistent set of units with rules on how these are to be used. However, different countries and publishers have differing conventions on the exact appearance of numbers (and units). The <i>siunitx</i> package provides a set of tools for authors to typeset quantities in a consistent way. The package has an extended set of configuration options which make it possible to follow varying typographic conventions with the same input syntax. The package includes automated processing of numbers and units, and the ability to control tabular alignment of numbers.

5525 skak – Fonts and macros for typesetting chess games

Web page on CTAN <https://ctan.org/pkg/skak>

name	skak
caption	Fonts and macros for typesetting chess games
author	Hoffmann, Torben
license	lppl = The LaTeX Project Public License (free)
version	1.5.3
description	(no language specified) This package provides macros and fonts in Metafont format which can be used to typeset chess games using PGN, and to show diagrams of the current board in a document. The package builds on work by Piet Tutelaers — the main novelty is the use of PGN for input instead of the more cumbersome coordinate notation (<code>g1f3</code> becomes the more readable <code>Nf3</code> in PGN). An Adobe Type 1 implementation of skak’s fonts is available as package skaknew ; an alternative chess notational scheme is available in package texmate , and a general mechanism for selecting chess fonts is provided in chessfss .

5527 *skb* – Tools for a repository of long-living documents

Web page on CTAN <https://ctan.org/pkg/skb>

name	skb
caption	Tools for a repository of long-living documents
author	van der Meer, Sven
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.52
description	(no language specified) The package provides macros that help to build a document repository for long living documents. It focuses on structure and re-use of text, code, figures etc. The basic concept is first to separate structure from content (i.e., text about a topic from the structure it is presented by) and then separating the content from the actual published document, thus enabling easy re-use of text blocks in different publications (i.e., text about a protocol in a short article about this protocol as well as in a book about many protocols); all without constantly copying or changing text. As a side effect, using the document classes provided, it hides a lot of LaTeX from someone who just wants to write articles and books.

5530 *sketch* – A 3d sketch language translator

Web page on CTAN <https://ctan.org/pkg/sketch>

name	sketch
caption	A 3d sketch language translator
author	Ressler, Eugene K.
license	gpl = GNU General Public License (free)
version	0.2
description	(no language specified) Sketch is a small, simple system for producing line drawings of two- or three-dimensional objects and scenes. It began as a way to make illustrations for a textbook after we could find no suitable tool for this purpose. Existing scene processors emphasized GUIs and/or photo-realism, neither of which was useful to us. We wanted to produce finely wrought, mathematically-based illustrations with no extraneous detail. The input language is reminiscent of PSTricks , so will be easy for current PSTricks users to learn; output is for use either by pstricks itself, or by pgf .

version	1.0.0 (2020-10-21)
last changes	2020-10-21
year	2020

description	(no language specified) This package attempts to make it easy for even a LaTeX novice to prepare proficiency tests, especially in combination with the exam document class. Thus, almost all command names are very similar. After defining skills in the preamble or in an external file, they are declared using labels, and can optionally be set as global skills. A skills table is generated to summarize the evaluated competencies and to allow for writing down the resulting proficiency level. A user's guide attempts to explain all of the possibilities in a readable way, with many examples.

5555 `smart-eqn` – Automatic math symbol styling for LaTeX documents

Web page on CTAN <https://ctan.org/pkg/smart-eqn>

name	<code>smart-eqn</code>
caption	Automatic math symbol styling for LaTeX documents
author	Xiang, Ziyue
copyright	Ziyue “Alan” Xiang (2021)
license	lpp1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0

description	(no language specified) In LaTeX typesetting, one usually needs to use different variants of a math symbol to clarify the meanings. For example, in linear algebra literature, it is common to use boldfaced symbols to represent vectors, and normal symbols to represent scalars. However, applying these variants by typing <code>\mathbf</code> , <code>\mathrm</code> commands manually can be daunting. This package aims to provide an automatic and customizable approach for math symbol styling which eliminates the need to enter style commands repeatedly.

5558 smartnotes – Visually anchored margin notes with connector lines and dynamic placementWeb page on CTAN <https://ctan.org/pkg/smartnotes>

name	smartnotes
caption	Visually anchored margin notes with connector lines and dynamic placement
author	Ranna, Abhishek
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.1 (2026-04-05)
last changes	2026-04-05
year	2026
description	(no language specified) This package provides margin notes that automatically choose the left or right margin based on the note position, so connector lines remain as short and direct as possible. Its main focus is clear visual anchoring: notes can point precisely to the relevant place in a sentence while avoiding unnecessarily long cross-page margin lines. The package also supports forced side placement, basic overlap avoidance, selectable box shapes, and an easy global disable option for drafting.

5559 smartref – Extend LaTeX’s \ref capabilityWeb page on CTAN <https://ctan.org/pkg/smartref>

name smartref

caption Extend LaTeX’s \ref capability

author Bilotta, Giuseppe

license lpl = The LaTeX Project Public License (free)

version 1.9

description (no language specified) The package extends the LaTeX labelling system: whenever a label is set, the values of counters (selected by the user) are recorded, along with the label. The value of these counters can be recalled with a command similar to `\pageref`.

The package also adds commands `\s[name]ref` (for each counter `[name]` that the user has selected); these commands display something only if the value of the `[name]` counter is changed from when the label was set. Many commands are provided to serve as a macro programming environment for using the extended labels.

5563 snapshot – List the external dependencies of a LaTeX documentWeb page on CTAN <https://ctan.org/pkg/snapshot>

name	snapshot
caption	List the external dependencies of a LaTeX document
author	Downes, Michael J.
author	The American Mathematical Society
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.14

description	(no language specified) The snapshot package helps the owner of a LaTeX document obtain a list of the external dependencies of the document, in a form that can be embedded at the top of the document. It provides a snapshot of the current processing context of the document, insofar as it can be determined from inside LaTeX. If a document contains such a dependency list, then it becomes possible to arrange that the document be processed always with the same versions of everything, in order to ensure the same output. This could be useful for someone wanting to keep a LaTeX document on hand and consistently reproduce an identical DVI file from it, on the fly; or for someone wanting to shield a document during the final stages of its production cycle from unexpected side effects of routine upgrades to the TeX system.

5601 softmakerfreefont – Support files for SoftMaker free fonts

Web page on CTAN <https://ctan.org/pkg/softmakerfreefont>

Alias `softmaker-freefont`

name `softmakerfreefont`

caption Support files for SoftMaker free fonts

author Kleber, Josef

copyright Josef Kleber (2010)

license lppl = The LaTeX Project Public License (free)

version 1.1

description (no language specified) In June 2009 **SoftMaker** offered a handwriting font for free download: The Softmaker Stone Handwriting. As handwriting fonts are a quite limited resource in the LaTeX world, the author decided to create support files for the font. Since then, the author has added support files for the fonts Alte Schwabacher, Artistic (regular), Baskerville-Nova (regular + bold + italic + bold italic), Bonita (regular), Broadway (regular + engraved), Canossa (regular + bold + light), Congress (regular + bold + italic), Delano-Caps, Digital (regular + bold + italic + bold italic), EgyptienneStd (light + bold + light italic + bold italic), Flagstaff (regular), Grenoble (regular + bold + italic + bold italic), Helium (regular + bold), Heliumtwo (regular + bold + shadow), Henderson (regular), Iceberg (regular + bold), Inverserif (regular), Jugendstil (regular), Marseille (regular + bold + italic + bold italic), Moab (regular), Nevada (regular + bold), Newcastle (regular + demibold + bold), Old Blackletter, Quadrat (regular + bold + italic + bold italic), Stone Handwriting, Sunset (regular + bold), Tampa (regular), VAGRounded (regular), Velo (regular), Veracruz (regular + bold + italic + bold italic).

This is the base package for all other softmakerfreefont packages, namely:

- **Alte Schwabacher**
- **Artistic**
- **Baskerville-Nova**
- **Bonita**
- **Broadway**
- **Canossa**
- **Congress**
- **Delano Caps**
- **Digital**

5603 songbook – Package for typesetting song lyrics and chord booksWeb page on CTAN <https://ctan.org/pkg/songbook>

name	songbook
caption	Package for typesetting song lyrics and chord books
author	Rath, Christopher
license	lgpl2.1 = GNU Lesser General Public License 2.1 (free)
version	4.5
description	(no language specified) The package provides an all purpose songbook style. Three types of output may be created from a single input file: "words and chords" books for the musicians to play from, "words only" songbooks for the congregation to sing from, and overhead transparency masters for congregational use. The package will also print a table of contents, an index sorted by title and first line, and an index sorted by key, or by artist/composer. The package attempts to handle songs in multiple keys, as well as songs in multiple languages.

5604 *songproj* – Generate Beamer slideshows with song lyrics

Web page on CTAN <https://ctan.org/pkg/songproj>

name	songproj
caption	Generate Beamer slideshows with song lyrics
author	Ortolo, Tanguy
copyright	Tanguy Ortolo (2022)
license	bsd3 = 3-clause BSD License (free)
version	1.2.0 (2023-03-29)
last changes	2023-03-29
year	2023
description	(no language specified) This package, together with the Beamer class, is used to generate slideshows with song lyrics. This is typically used in religious services in churches equipped with a projector, for which this package has been written, but it can be useful for any type of singing assembly. It provides environments to describe a song in a natural way, and formatting it into slides with overlays. The package comes with an additional Python script that can be used to convert plain-text song lyrics to the expected LaTeX markup.

5605 *songs* – Produce song books for church or fellowship

Web page on CTAN <https://ctan.org/pkg/songs>

name	songs
caption	Produce song books for church or fellowship
author	Hamlen, Kevin W.
copyright	Kevin W. Hamlen (2009-2018)
license	gpl2 = GNU General Public License, version 2 (free)
version	3.1 (2018-09-12)
last changes	2018-09-12
year	2018
description	(no language specified) The package provides a means of producing beautiful song books for church or fellowship. It offers: • a very easy chord-entry syntax; • multiple modes (words-only; words+chords; slides; handouts); • measure bars; • guitar tablatures; • automatic transposition; • scripture quotations; • multiple indexes (sorted by title, author, important lyrics, or scripture references); and • projector-style output generation, for interactive use. A set of example documents is provided.

5609 *soul* – Hyphenation for letterspacing, underlining, and more

Web page on CTAN	https://ctan.org/pkg/soul
Alias	<code>soulutf8</code>
name	<code>soul</code>
caption	Hyphenation for letterspacing, underlining, and more
author	Oberdiek, Heiko
copyright	Oberdiek Package Support Group (2016-2026)
copyright	Heiko Oberdiek (2007)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	3.2 (2026-03-06)
last changes	2026-03-06
year	2026
description	(no language specified) The package provides hyphenable spacing out (letterspacing), underlining, striking out, etc., using the TeX hyphenation algorithm to find the proper hyphens automatically. It also provides a mechanism that can be used to implement similar tasks, that have to treat text syllable by syllable. This is shown in two examples. This version is a merge of the original <code>soul</code> package from Melchior Franz and the <code>soulutf8</code> package from Heiko Oberdiek and supports also UTF8.

5612 *source2e* – LaTeX2e kernel documentation for the entire system as one document

Web page on CTAN	https://ctan.org/pkg/source2e
name	source2e
caption	LaTeX2e kernel documentation for the entire system as one document
author	The LaTeX Project Team
copyright	The LaTeX3 Project (1993-2014)
license	lppl = The LaTeX Project Public License (free)
version	(2009-09-24)
last changes	2009-09-24
year	2009
description	(no language specified) The LaTeX system is provided as a large number of separate modules. The interested user may process each module separately, to produce formatted documentation. Formatted documentation of the entire system, however, is a more substantial undertaking; <code>source2e.tex</code> provides what the user needs to produce a complete listing of the LaTeX kernel. It not only includes the relevant modules in the ‘correct’ order, but it also guides the user through the rather complex compilation process (by writing messages to the terminal and log). The document also includes a command index. A formatted copy of <code>source2e</code> is provided in the latex-tds bundle; the file itself is part of the LaTeX base distribution.
documentation	(no language specified) <i>The document itself (PDF)</i>: https://ctan.org/tex-archive/macros/latex/base/source2e.pdf

5621 *spalign* – Typeset matrices and arrays with spaces and semicolons as delimiters

Web page on CTAN <https://ctan.org/pkg/spalign>

name *spalign*
caption Typeset matrices and arrays with spaces and semicolons as delimiters
author Rabinoff, Joseph
copyright Joseph Rabinoff (2016)
license lppl1.3 = The LaTeX Project Public License 1.3 (free)
version (2016-10-05)
last changes 2016-10-05

year	2016
description	(no language specified) Typeset matrices and arrays with spaces and semicolons as delimiters. The purpose of this package is to decrease the number of keystrokes needed to typeset small amounts of aligned material (matrices, arrays, etc.). It provides a facility for typing alignment environments and macros with spaces as the alignment delimiter and semicolons (by default) as the end-of-row indicator. For instance, typeset a matrix using <code>\spalignmat{1 12 -3; 24 -2 2; 0 0 1}</code>, or a vector using <code>\spalignvector{22 \frac{1}{2} -14}</code>. This package also contains utility macros for typesetting augmented matrices, vectors, arrays, systems of equations, and more, and is easily extendable to other situations that use alignments. People who have to typeset a large number of matrices (like linear algebra teachers) should find this package to be a real time saver.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/macros/latex/contrib/spalign/README.md

5622 *spanish-mx* – Typeset Spanish as in Mexico

Web page on CTAN <https://ctan.org/pkg/spanish-mx>

name	spanish-mx
caption	Typeset Spanish as in Mexico
author	Rivera, Luis
copyright	J. Luis Rivera N. (2008)
license	lppl = The LaTeX Project Public License (free)
version	1.1a
description	(no language specified) The bundle provides files to support typesetting of texts in Spanish according to Mexican current practices, using babel. The files merge earlier work on a <code>mexican.ldf</code>, or may be used to define a configuration that will typeset all documents (that request babel's <code>spanish</code> option) to use the Mexican language facilities. (Note that this facility is only available with version $\geq 4.2b$ releases of the Spanish option.) However, according to the author, the purpose of this package is nowadays better served by the babel package with option <code>spanish.mexico</code>.

5628 spectralsequences – Print spectral sequence diagrams using PGF/TikZ

Web page on CTAN <https://ctan.org/pkg/spectralsequences>

name	spectralsequences
caption	Print spectral sequence diagrams using PGF/TikZ
author	Chatham, Hood
license	lppl = The LaTeX Project Public License (free)
version	1.3.3 (2023-01-28)
last changes	2023-01-28
year	2023
description	(no language specified) The package is a specialized tool built on top of PGF/TikZ for drawing spectral sequences. It provides a powerful, concise syntax for specifying the data of a spectral sequence, and then allows the user to print various pages of spectral sequences, automatically choosing which subset of the classes, differentials, and structure lines to display on each page. It also handles most of the details of the layout. At the same time, it is extremely flexible. <code>spectralsequences</code> is closely integrated with TikZ to ensure that users can take advantage of as much as possible of its expressive power. It is possible to turn off most of the automated layout features and draw replacements using TikZ commands. The package also provides a carefully designed error reporting system intended to ensure that it is as clear as possible what is going wrong.

5629 *spelatex* – Create PDF documents with hyperlinks to audiofragments

Web page on CTAN <https://ctan.org/pkg/spelatex>

name	SpeLaTeX
caption	Create PDF documents with hyperlinks to audiofragments
author	Daems, Walter
copyright	Walter Daems and Paul Levrie (2024-2025)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.95 (2025-01-31)
last changes	2025-01-31
year	2025
description	(no language specified) This package equips the PDF that is generated with LaTeX with hyperlinks to audio files that contain the spoken equivalent of the original text, equations, figures and tables. The audio files can be automatically generated using a Perl-script called <code>spel-wizard.pl</code> (part of the <code>SpeL: :Wizard</code> module available on CPAN). This script interfaces with locally installed text-to-speech software or with online available (paying) cloud services to generate the audio files. To this end, the LaTeX chunks of your text are parsed and translated to "natural language". SpeLaTeX is babel-enabled such that your text is read with the correct pronunciation corresponding to your language. So far, it provides the languages English and Dutch, but it will be extended in the future. You can package your PDF together with the audio-files (in your favorite archive format) and make it available to your users, such that the only requirements to read your text and listen to the audio are a suited PDF reader and media player. For the text-to-speech conversion, one can use free options (festival, balabolka, ...) or paying services (e.g. AWS polly).

5634 spiderweb – A tool for building WEB systems

Web page on CTAN <https://ctan.org/pkg/spiderweb>

name	spiderweb
caption	A tool for building WEB systems
author	Ramsey, Norman
copyright	Norman Ramsey (1989-1992)
license	other-free = Free license not otherwise listed (free)

description	(no language specified) Spidery WEB is built around the tool Spider, that reads a description of a programming language, and writes source code for a Weave and a Tangle which support that language. The base sources derive from CWEB , so that the resulting programs inherit some properties of that system (e.g., the ability to read multiple files). Spider itself is written in Awk, and the Weave and Tangle output is in C. Spidery WEB is no longer supported: its author used lessons learned from the development to produce the still more compact noweb system.

5636 *spim-phdthesisthemes* – Classes, styles and configuration files for writing PhD dissertations

Web page on CTAN <https://ctan.org/pkg/spim-phdthesisthemes>

name	spim-phdthesisthemes
caption	Classes, styles and configuration files for writing PhD dissertations
author	Galland, Stéphane
copyright	Stéphane Galland (2012-2026)
license	other-nonfree = License that prevents distribution (not free)
license	lgpl3 = GNU Lesser General Public License 3 (free)
version	20260420
description	(no language specified) LaTeX classes, packages and configuration files for typesetting a PhD dissertation following the SPIM doctoral school template and recommandations.

Built on top of the powerful [UPmethodology](#) suite, it provides a professional, ready-to-use structure with advanced formatting macros.

These classes packages and configuration files could be easily extended and adapted to the style for your own institution.

spim-phdthesisthemes is part of the larger project [TeX-templates](#) .

Note on Licensing

The package contains two distinct types of material:

1. LaTeX source code (all files that are under the `src/` directory and any documentation source files).
2. University and institutions logo images (all files under the `logos/` directory).

The LaTeX source code is free software: you can redistribute it and/or modify it under the terms of the GNU Lesser General Public License as published by the Free Software Foundation, either version 3 of the License, or (at your option) any later version. A copy of the GNU Lesser General Public License (LGPLv3) is provided in the file 'LICENSE.LGPLv3'.

The logo files are not licensed under the LGPLv3. They are the property of their respective university or institution and are included with permission for redistribution only as part of this complete package. They may NOT be modified, altered, or extracted and used separately without explicit written permission from the owning university or institution. The exact terms governing the logos are set forth in the file `logos/LICENSE.logos`. By redistributing this package, you agree to abide by those terms.

5639 *splines* – MetaPost macros for drawing cubic spline interpolants

Web page on CTAN <https://ctan.org/pkg/splines>

name	splines
caption	MetaPost macros for drawing cubic spline interpolants
author	Luecking, Daniel H.
copyright	Daniel H. Luecking (2002-2005)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.2
description	(no language specified) This is a small package of macros for creating cubic spline interpolants in MetaPost or Metafont. Given a list of points the macros can produce a closed or a relaxed spline joining them. Given a list of function values y_j at x_j , the result would define the graph of a cubic spline interpolating function $y=f(x)$, which is either periodic or relaxed.

5643 *splitindex* – Unlimited number of indexes

Web page on CTAN <https://ctan.org/pkg/splitindex>

name	<code>splitindex</code>
caption	Unlimited number of indexes
author	Kohm, Markus
copyright	Markus Kohm (2002-2013)
license	lppl = The LaTeX Project Public License (free)
version	1.2c
description	(no language specified) SplitIndex consists of a LaTeX package, <code>splitidx</code> , and a small program, <code>splitindex</code> . The package may be used to produce one index or several indexes. Without <code>splitindex</code> (for example, using the <code>index</code> package), the number of indexes is limited by the number of TeX's output streams. But using the program you may use even more than 16 indexes: <code>splitidx</code> outputs only a single file <code>\jobname.idx</code> and the program splits that file into several raw index files and calls your favorite index processor for each of the files.

author	van Eijk, Oscar
copyright	Oscar van Eijk (2001-2024)
license	lppl = The LaTeX Project Public License (free)
version	3.0 (2024-09-20)
last changes	2024-09-20
year	2024
description	(no language specified) SQLTeX is a preprocessor that enables the use of SQL statements in LaTeX. The SQLTeX perl script reads an input file containing the LaTeX source with SQL commands, and writes a LaTeX file in which the SQL commands have been replaced by the values from their execution. It is possible to select a field for substitution in your LaTeX document, or to be used as input in another SQL command. (When an SQL command returns multiple fields and/or rows, the values can only be used within the document.) The default is to use MySQL databases, but Pg, Sybase, Oracle, Ingres, mSQL and PostgreSQL are also supported.

5664 *sshrc-insight* – A LaTeX class for SSHRC Insight Grant proposals

Web page on CTAN <https://ctan.org/pkg/sshrc-insight>

name	sshrc-insight
caption	A LaTeX class for SSHRC Insight Grant proposals
author	Miller, Tristan
copyright	Tristan Miller (2024)
copyright	Steven B. Segletes (2021)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2024.1.0 (2024-10-21)
last changes	2024-10-21
year	2024
description	(no language specified) The <i>sshrc-insight</i> LaTeX class facilitates the preparation of funding proposals for the Insight Grants program of Canada's Social Sciences and Humanities Research Council (SSHRC). It has the following key features: • Formats the proposal according to the SSHRC's specifications. • Allows parts of the proposal to be compiled into separate PDFs to attach to the appropriate places in the online application form. • Alternatively, allows the proposal to be compiled into a single PDF in order to facilitate the writing and pre-submission reviewing process. • Ensures that citation numbering remains consistent regardless whether the proposal is compiled as separate PDFs or a single PDF. • Provides character counts for long-answer form fields. • Supports preparation of proposals in either English or French. • Compatible with pdfLaTeX, XeLaTeX, and LuaLaTeX.

description	(no language specified) A class and package is provided which allows TeX pictures or other TeX code to be compiled standalone or as part of a main document. Special support for pictures with beamer overlays is also provided. The package is used in the main document and skips extra preambles in sub-files. The class may be used to simplify the preamble in sub-files. By default the preview package is used to display the typeset code without margins. The behaviour in standalone mode may adjusted using a configuration file <code>standalone.cfg</code> to redefine the <code>standalone</code> environment.

version	3.0 (2016-12-21)
last changes	2016-12-21
year	2016
description	(no language specified) <i>stanli</i> is a SStructural ANalysis LIBrary based on PGF/TikZ. Creating new assignments and tests, at university, is usually a very time-consuming task, especially when this includes drawing graphics. In the field of structural engineering, those small structures are a key part for teaching. This package permits to create such 2D and 3D structures in a very fast and simple way.

5680 *statementsp* – Theorem and proposition boxes with preview and recall functionsWeb page on CTAN <https://ctan.org/pkg/statementsp>

name	<code>statementsp</code>
caption	Theorem and proposition boxes with preview and recall functions
author	Ikeda, Rirai
copyright	Rirai Ikeda (2026)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0
description	(no language specified) This package provides a convenient way to create customizable theorem and proposition boxes using <code>tcolorbox</code> . Its most distinctive feature is the automatic Preview and Recall mechanism. By using a single command (<code>\refcallsp</code>), you can display a statement box anywhere in your document. The package automatically determines its position relative to the main definition: if placed before, it generates a "Preview" box; if placed after, it generates a "Recall" box. Both automatically include hyperlinks jumping directly to the main definition.

5683 *statistics* – Compute and typeset statistics tables and graphics

Web page on CTAN <https://ctan.org/pkg/statistics>

name	<i>statistics</i>
caption	Compute and typeset statistics tables and graphics
author	Rivaud, Julien
copyright	RIVAUD Julien (2014-2019)
license	gpl3+ = GNU General Public License, version 3 or newer (free)
version	2.2 (2019-09-29)
last changes	2019-09-29
year	2019
description	(no language specified) The 'statistics' package can compute and typeset statistics like frequency tables, cumulative distribution functions (increasing or decreasing, in frequency or absolute count domain), from the counts of individual values, or ranges, or even the raw value list with repetitions. It can also compute and draw a bar diagram in case of individual values, or, when the data repartition is known from ranges, an histogram or the continuous cumulative distribution function.

You can ask 'statistics' to display no result, selective results or all of them. Similarly 'statistics' can draw only some parts of the graphs. Every part of the generated tables or graphics is customizable.

5690 *stealcaps* – “Steal” small capitals

Web page on CTAN <https://ctan.org/pkg/stealcaps>

name *stealcaps*

caption “Steal” small capitals

author Giannotti, Ruben

copyright Ruben Giannotti (2018-2022)

license lpl1.3c = The LaTeX Project Public License 1.3c (free)

version 1.1 (2022-11-07)

last changes 2022-11-07

year 2022

description (no language specified) This little package is mainly meant to be used when there is a (TrueType or OpenType) font that does not provide real small capitals. As a workaround, this package helps to borrow, or “steal”, the small capitals from another font. This might also be useful in the rare case that someone does not like the present small capitals, and wants to change them, or likes those from another font better.

To achieve the borrowing, one only needs to load the package and specify the name of the target font via the `from` option.

Package dependencies: *pgfplots* , *iftex* , *fontspec* .

5692 *stellenbosch* – Stellenbosch thesis bundle (legacy version)

Web page on CTAN <https://ctan.org/pkg/stellenbosch>

name	stellenbosch
caption	Stellenbosch thesis bundle (legacy version)
author	Els, Daniel
copyright	Danie Els (2003-2015)
license	lpl = The LaTeX Project Public License (free)
version	1.1a
description	(no language specified) Note: This bundle should only be used for typesetting legacy documents. For new documents, its successor stellenbosch-2 is available. The <i>usthesis</i> class/style files are provided to typeset reports, theses and dissertations that conform to the requirements of the Engineering Faculty of the University of Stellenbosch. The class file <code>usthesis.cls</code> is based on the standard LaTeX book class, while <code>usthesis.sty</code> is a style file to be loaded on top of the very powerful memoir class. Both options give identical output, but the benefit of the using <i>memoir</i> is that it has many additional command and environments for formatting and processing of a document. <i>Ustthesis</i> is primarily concerned with the formatting of the front matter such as the title page, abstract, etc. and a decent page layout on A4 paper. It also works together with the <i>babel</i> package to provide language options to typeset documents in Afrikaans or in English. Additional packages are provided for bibliographic matter, note title pages, lists of symbols, as well as various graphic files for logos.

5701 *stix2-type1* – Type1 versions of the STIX Two OpenType fontsWeb page on CTAN <https://ctan.org/pkg/stix2-type1>

name	stix2-type1
caption	Type1 versions of the STIX Two OpenType fonts
author	The STI Pub Companies
author	Jones, David M.
copyright	STI Pub Companies (2001-2018, 2021)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
license	ofl = The SIL Open Font License (free)
version	2.0.2
description	(no language specified) The stix2 package provides minimal support for using the STIX Two fonts with versions of TeX that are limited to TFM files, Type 1 PostScript fonts, and 8-bit font encodings. Version 2.0.0 of the STIX fonts are being released in this format in hopes of easing the transition from legacy TeX engines to modern fully Unicode-compatible systems. The Type 1 versions are merely a repackaging of the original OpenType versions and should not be viewed as independent entities. Some glyphs that are traditionally available in TeX math fonts are not yet available in the STIX Two OpenType fonts. In such cases, we have chosen to omit them from the stix2 package rather than create incompatibilities between the OpenType and Type 1 versions. In addition, while development of the OpenType versions is ongoing, no further updates are planned to the Type 1 versions of the fonts.

5713 stringstrings – String manipulation for cosmetic and programming applicationWeb page on CTAN <https://ctan.org/pkg/stringstrings>

name	stringstrings
caption	String manipulation for cosmetic and programming application
author	Segletes, Steven B.
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.24
description	(no language specified) The package provides a large and sundry set of macros for the manipulation of strings. The macros are developed not merely for cosmetic application (such as changing the case of letters and string substitution), but also for programming applications such as character look-ahead, argument parsing, conditional tests on various string conditions, etc. The macros were designed all to be expandable (note that things such as <code>\uppercase</code> and <code>\lowercase</code> are not expandable), so that the macros may be strung together sequentially and nested (after a fashion) to achieve rather complex manipulations.
documentation	(no language specified) <i>Package documentation</i>: https://ctan.org/tex-archive/macros/latex/contrib/stringstrings/stringstrings.pdf

5719 studenthandouts – Management and styling of student handout projects

Web page on CTAN <https://ctan.org/pkg/studenthandouts>

name	Student Handouts
caption	Management and styling of student handout projects
author	Fennell, James
copyright	James Fennell (2017)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)

version	1.0 (2017-03-15)
last changes	2017-03-15
year	2017
description	(no language specified) This package can be used to generate a single master document that contains a set of individual student handouts. The package has two main functions. First, it provides a simple framework for organizing handout source code, and supplies a set of import management tools for selectively importing a subset of the handouts into the master document. Selective import is convenient when compilation of all of the handouts is unnecessary, for example when working on a new handout. As a secondary feature, the package defines a basic visual style for handouts. This style can be easily changed.

5721 sty2dtx – Create a .dtx file from a .sty file

Web page on CTAN <https://ctan.org/pkg/sty2dtx>

name	<code>sty2dtx</code>
caption	Create a .dtx file from a .sty file
author	Scharrer, Martin
copyright	Martin Scharrer (2010-2022)
license	gpl3 = GNU General Public License, version 3 (free)
version	2.4 (2022-10-18)
last changes	2022-10-18
year	2022
description	(no language specified) The package provides a Perl script that converts a .sty file (LaTeX package) to .dtx format (documented LaTeX source), by surrounding macro definitions with <code>macro</code> and <code>macrocode</code> environments. The macro name is automatically inserted as an argument to the <code>macro</code> environment. Code lines outside macro definitions are wrapped only in <code>macrocode</code> environments. Empty lines are removed.

The script should not be thought to be fool proof and 100% accurate but rather as a good start to the business of making a `.dtx` file from an undocumented style file.

Full `.dtx` files are generated. A template based on the skeleton file from [dtxtut](https://ctan.org/tex-archive/support/dtxtut) is used. User level macros are added automatically to the "Usage" section of the `.dtx` file. A corresponding `.ins` file can be generated as well.

5724 *styleitems* – Independent auto-numbered list labels drawn with TikZ

Web page on CTAN <https://ctan.org/pkg/styleitems>

name	styleitems
caption	Independent auto-numbered list labels drawn with TikZ
author	Hameed, Faris
copyright	Faris Hameed (null)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.0
description	(no language specified) The package provides a fully self-contained auto-numbering system for decorative list labels based on TikZ. Unlike packages such as <code>enumitem</code>, each label is rendered as a live TikZ node, allowing full control over shape, colour, stroke, and numbering style. Each list instance maintains its own counter using an internal stack mechanism, ensuring that nested lists at any depth remain independent and never interfere with their parent counters. Available label shapes (16 total): Circle, Square, Rectangle, Diamond, Triangle, Pentagon, Hexagon, Octagon, Star (5-point), Star (12-point), Ellipse Callout (left/right), Cloud Callout (left/right), and four arrow directions (right, left, up, down). Every shape is available in two modes: vertical and inline. Numbering styles (8): arabic, indic (Arabic-Indic digits), alph, Alph, roman, Roman, aralph (Hijai order), aralphabjad (Abjad order). All environments accept optional arguments for colour, numbering style, text rotation, and text scale. The package fully supports bidirectional (Arabic/RTL) documents alongside standard LTR typesetting.

5726 *suanpan-13* – Traditional Chinese 7-bids suanpan (abacus) package based on l3drawWeb page on CTAN <https://ctan.org/pkg/suanpan-13>

name	suanpan-13
caption	Traditional Chinese 7-bids suanpan (abacus) package based on l3draw
author	Geng, Nan
copyright	Nan Geng (2020-2024)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.2.4 (2024-10-13)
last changes	2024-10-13
year	2024
description	(no language specified) This traditional Chinese 7-bids abacus drawing package utilizes <code>l3draw</code> and is developed with expl3. It can effectively manage both upper and lower bids, while also considering bottom bid, top bid, and hanging bid. The package offers a unique environment for drawing abacuses, denoted as <code>suanpan</code>. Within this environment, 7 specialized macros are available for the creation of abacuses. The <code>\rod</code> macro is used to lay out a single rod, while the <code>\rod*</code> macro draws a counting point on this rod's beam. The <code>\rods</code> macro is capable of laying out a set of rods. The <code>\bid</code> macro colors the specified bid. The <code>\bids</code> macro colors all inner bids that are near the beam, while the <code>\bids*</code> macro colors all outer bids that are far from the beam. Lastly, the <code>\lrframe</code> macro is used to lay out the left and right frames of an abacus. At the same time, the package offers customization options for abacus, including line width, draw color, fill color, bid space, rod space, etc. These can be configured through package options, <code>suanpan</code> environment options, or the <code>\suanpanset</code> macro.

5729 subdocs – Multifile documents

Web page on CTAN <https://ctan.org/pkg/subdocs>

name	subdocs
caption	Multifile documents
author	Bezos López, Javier
copyright	Javier Bezos (2009-2019)
license	mit = MIT License (free)
version	0.1
description	(no language specified) This is an experimental package aiming to provide a different approach for multidocument works (mainly, books with a document per chapter). Unlike the <code>\include</code> mechanism, every subdocument is a complete normal LaTeX document and may be typeset separately. What the package does is sharing the <code>.aux</code> files. The present release is an alpha version, and no attempt has yet been made to allow it to work with, say, hyperref.

5730 *subeqn* – Package for subequation numbering

Web page on CTAN <https://ctan.org/pkg/subeqn>

name	subeqn
caption	Package for subequation numbering
author	Arseneau, Donald
author	Braams, Johannes L.
copyright	Johannes L. Braams (1999-2024)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.0c
description	(no language specified) Sometimes it is necessary to be able to refer to subexpressions of an equation. In order to do that these subexpressions should be numbered. In standard LaTeX there is no provision for this. To solve this problem Stephen Gildea once wrote <code>subeqn.sty</code> for LaTeX 2.09 ; Donald Arseneau rewrote the macros and Johannes Braams made them available for LaTeX2e . Note that this package is not compatible with the package subeqnarray (written by Johannes Braams), but it can be used together with the LaTeX class options <code>leqno</code> and <code>fleqn</code> .

version	2.1e (2024-07-20)
last changes	2024-07-20
year	2024
description	(no language specified) This package defines the <code>subeqnarray</code> and <code>subeqnarray*</code> environments, which behave like the corresponding <code>eqnarray</code> and <code>eqnarray*</code> environments, except that the individual lines are numbered like 1a, 1b, 1c, etc. To refer to these numbers an extra label command <code>\slabel</code> is provided. Users are urged to consider the alignment capabilities of the amsmath bundle, which produce better results than <code>eqnarray</code>-related macros.

5732 *subfig* – Figures broken into subfigures

Web page on CTAN <https://ctan.org/pkg/subfig>

name	<code>subfig</code>
caption	Figures broken into subfigures
author	Cochran, Steven Douglas
author	bidi-tex GitHub Organisation
author	Khalighi, Vafa
copyright	Steven Douglas Cochran (2003-2005)
license	lppl = The LaTeX Project Public License (free)
version	1.3
description	(no language specified) The package provides support for the manipulation and reference of small or ‘sub’ figures and tables within a single figure or table environment. It is convenient to use this package when your subfigures are to be separately captioned, referenced, or are to be included in the List-of-Figures. A new <code>\subfigure</code> command is introduced which can be used inside a figure environment for each subfigure. An optional first argument is used as the caption for that subfigure. This package supersedes the subfigure package (which is no longer maintained). The name was changed since the package is not completely backward compatible with the older package. The major advantage of the new package is that the user interface is keyword/value driven and easier to use. To ease the transition from the subfigure package, the distribution includes a configuration file (<code>subfig.cfg</code>) which nearly emulates the subfigure package. The functionality of the package is provided by the (more recent still) subcaption package.

5738 subscript – Provides the \textsubscript command

Web page on CTAN <https://ctan.org/pkg/subscript>

name	subscript
caption	Provides the \textsubscript command
author	Carlisle, David
author	Fairbairns, Robin
license	lppl = The LaTeX Project Public License (free)

description	(no language specified) Provides a command <code>\textsubscript</code> , which is the counterpart to LaTeX's <code>\textsuperscript</code> command. From 2006 on this command was made available by the fixltx2e package distributed with LaTeX itself, and starting with the LaTeX 2015 releases it became part of the LaTeX kernel. Thus, these days this code is only necessary if you run on a <i>very</i> old LaTeX distribution and want to make use of this command. Subscript is one of a series of fragments designed for use by package writers and others.

5744 *sudoku* – Create sudoku grids

Web page on CTAN <https://ctan.org/pkg/sudoku>

name	sudoku
caption	Create sudoku grids
author	Abraham, Paul
copyright	Paul Abraham (2005)
license	lppl = The LaTeX Project Public License (free)
version	1.0
description	(no language specified) The sudoku package provides an environment for typesetting sudoku grids. A sudoku puzzle is a 9x9 grid where some of the squares in the grid contain numbers. The rules are simple: every column can only contain the digits 1 to 9, every row can only contain the digits 1 to 9 and every 3x3 box can only contain the digits 1 to 9. More information, including help and example puzzles, can be found at sudoku.org.uk. This site also has blank sudoku grids (or worksheets), but you will not need to print them from there if you have this package installed.

author	Hanisch, Falk
copyright	Falk Hanisch (2017-2020)
copyright	Philip Ilten (2012-2016)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	2.02k (2020-11-26)
last changes	2020-11-26
year	2020
description	(no language specified) This bundle contains the two packages <code>svg</code> and <code>svg-extract</code>. The <code>svg</code> package is intended for the automated integration of SVG graphics into LaTeX documents. Therefore the capabilities provided by <code>Inkscape</code> — or more precisely its command line tool — are used to export the text within an SVG graphic to a separate file, which is then rendered by LaTeX. For this purpose the two commands <code>\includesvg</code> and <code>\includeinkscape</code> are provided which are very similar to the <code>\includegraphics</code> command of the <code>graphicx</code> package.

In addition, the package `svg-extract` allows the extraction of these graphics into independent files in different graphic formats, exactly as it is rendered within the LaTeX document, using either `ImageMagick` or `Ghostscript`.

5758 `svg-animate` – Generate animated SVG diagrams with TikZ

Web page on CTAN	https://ctan.org/pkg/svg-animate
name	<code>svg-animate</code>
caption	Generate animated SVG diagrams with TikZ
author	Gross, Sébastien
copyright	Sébastien Gross (2026)
license	agpl3 = GNU Affero General Public License, version 3 (free)
version	1.0 (2026-03-16)
last changes	2026-03-16
year	2026

description	(no language specified) This package provides step-by-step animations for TikZ diagrams in SVG format. The resulting animations run natively in web browsers and do not require JavaScript or plugins. From a single source file, both an animated SVG and a static PDF can be generated. In the PDF output, steps may be stacked or collapsed into a single frame. The animation model is based on discrete <i>steps</i>. A TikZ picture is enclosed in <code>\begin{animate}</code>, material to be shown at a given step is marked with <code>\reveal{...}</code>, and <code>\animstep</code> is used to advance to the next step. Additional features include per-step durations, visibility over multiple steps or step ranges, blinking elements, one-shot or looping playback, and a <code>\noanimate</code> fallback for PDF output. In SVG output, visibility changes are implemented by means of SMIL animations with instantaneous opacity transitions.

5759 *svg-inkscape* – How to include an SVG image in LaTeX using Inkscape

Web page on CTAN <https://ctan.org/pkg/svg-inkscape>

name	svg-inkscape
caption	How to include an SVG image in LaTeX using Inkscape
author	Engelen, Johan B. C.
copyright	J.B.C. Engelen (2010)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	(2013-11-21)
last changes	2013-11-21
year	2013
description	(no language specified) The document demonstrates the use of SVG images in LaTeX documents. Using the "PDF+LaTeX output" option of Inkscape, it is possible to include SVG in documents, in which LaTeX typesets the text. This results in uniform text style throughout the document, including text in images; moreover, LaTeX commands may be used in the image's text, providing such things as mathematics and references. The document also describes how to automate the conversion from SVG to PDF+LaTeX using Inkscape.

5762 `svn-multi` – Subversion keywords in multi-file LaTeX documents

Web page on CTAN <https://ctan.org/pkg/svn-multi>

name	<code>svn-multi</code>
caption	Subversion keywords in multi-file LaTeX documents
author	Scharrer, Martin
copyright	Martin Scharrer (2006-2009)
license	lppl = The LaTeX Project Public License (free)
version	2.4d
description	(no language specified) This package lets you typeset keywords of the version control system Subversion inside your LaTeX files anywhere you like. Unlike the otherwise similar package <code>svn</code> the use of multiple files for one LaTeX document is well supported. The package uses the author’s <code>filehook</code> and <code>currfile</code> packages. The package interacts with an external Perl script, to retrieve information necessary for the required output.

5769 swiftextex – Edit doc.sty and normal LaTeX files with GNU Emacs

Web page on CTAN <https://ctan.org/pkg/swiftextex>

name swiftextex
 caption Edit doc.sty and normal LaTeX files with GNU Emacs
 author Swift, Matt
 license gpl = GNU General Public License (free)
 version 1.35
 description (no language specified) DocTeX mode is for editing buffers containing self-documenting LaTeX code that uses the **doc** package, including the **ltxdoc** document class. DocTeX mode was designed to be significantly more useful than the alternatives provided by standard Emacs and **AUC TeX** (AUC TeX has since caught up in this regard). SwiftTeX mode is for editing buffers containing normal LaTeX files and provides an alternative to the LaTeX modes in the standard Emacs distribution and in **AUC TeX**.

5770 swimgraf – Graphical/textual representations of swimming performances

Web page on CTAN <https://ctan.org/pkg/swimgraf>

name Swimgraf
 caption Graphical/textual representations of swimming performances
 author Osborne, Martin J.
 license lppl = The LaTeX Project Public License (free)
 version (2002-05-30)
 last changes 2002-05-30

5771 *swimch* – A constant time/expandable switch/case

year	2002
description	(no language specified) The package provides two macros that produce representations of a swimmer's performances. The user records data in a text file and specifies as arguments of the macros the date range of interest. The macros extract the relevant information from the file and process it: <code>\swimgraph</code> produces a graph of the times in a single swimming event (specified as an argument), plotting long course and short course times in separate lines. Records and qualifying times, stored in text files, may optionally be included on the graph. <code>\swimtext</code> produces a written record of the times in all events. Files of current world and Canadian records are included. The package requires the PSTricks and keyval packages. For attractive output it also requires a colour output device.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/swimgraf/swimgraf.pdf
– local file	<code>./3094298529-swimgraf.pdf</code>

5788 *syntonly* – Run a document through LaTeX for syntax checking

version	0.2 (2025-10-26)
last changes	2025-10-26
year	2025
description	(no language specified) This package allows to slant (“shear”) short pieces of text to the left or to the right by an arbitrary angle, thus creating for example “fake italics” or upright italics. Several back-ends that do the actual shearing are supported, though currently the pdfLaTeX back-end works best concerning output quality and processing speed.

5796 t1-fraktur – A pair of fraktur font families in T1 encodingWeb page on CTAN <https://ctan.org/pkg/t1-fraktur>

name	t1-fraktur
caption	A pair of fraktur font families in T1 encoding
author	Taupin, Daniel
author	Kurz, Vladislav
license	noinfo = noinfo
version	(2002-11-07)
last changes	2002-11-07
year	2002
description	(no language specified) These fonts were (it seems) originally developed for use with Czech and other Eastern European languages, and then extended for more general use. They don't, in fact, cover the entire T1 encoding, but they come pretty close. The fonts are distributed as Metafont source. Both font families come in both upright and "slanted" shape, and in both medium and bold weight (an interesting choice, given that the "medium" is already pretty heavy).
documentation	(no language specified) <i>Font sample</i>: https://ctan.org/tex-archive/fonts/t1-fraktur/testfrak.pdf
– local file	./7566151650-testfrak.pdf
on CTAN	https://ctan.org/tex-archive/fonts/t1-fraktur
on MikTeX	t1-fraktur
keyword	font-gothic (font for gothic or blackletter shapes)
keyword	font-mf (fonts distributed as Metafont source)
keyword	font (fonts themselves)

Web page on CTAN <https://ctan.org/pkg/t1enc>

name	t1enc
caption	Standard package for activating ec fonts
author	The LaTeX Project Team
license	lppl = The LaTeX Project Public License (free)
version	(1994-06-01)
last changes	1994-06-01
year	1994
description	(no language specified) Obsolete package for activating T1 font encoding. The replacement fontenc package with (optional) argument T1 does this task more satisfactorily.
on MikTeX	ltxbase
on TeXLive	latex
keyword	inputenc (input encoding support for TeX engines)
keyword	obsolete (package declared obsolete)
language(s)	no language specified
last access	2025-02-07

5798 **t1infos** – Utilities for PostScript fonts

Web page on CTAN <https://ctan.org/pkg/t1infos>

name	t1infos
caption	Utilities for PostScript fonts
author	Baruchel, Thomas
license	bsd = BSD Style License (free)
version	1.0

description	(no language specified) There are here two little programs written in C (using <code>t1lib</code>) for scanning Type 1 fonts, and doing: – compute the ‘black area’ of each glyph, with how much percent of the square containing the glyph is black, and – checking if the ‘extremas’ (see Adobe Type 1 specifications) of the outline are correct, and tell which one are missing. There is also here a PostScript dictionary containing three algorithms for automatic kerning (the kerning is computed ‘on the fly’ instead of being pre-computed by external software like TeX, groff or lout; very useful for some PostScript hacking). Two of these algorithms are quite classical; the third is original and is PostScript-optimized. The PostScript file in the distribution contains both demonstration code and the dictionary itself.
documentation	(no language specified) <i>README file</i> : https://ctan.org/tex-archive/fonts/utilities/t1infos/README
on CTAN	https://ctan.org/tex-archive/fonts/utilities/t1infos
keyword	<code>ps-manip</code> (manipulate PostScript files)

5806 *tabfigures* – Maintain vertical alignment of figures

Web page on CTAN	https://ctan.org/pkg/tabfigures
name	<code>tabfigures</code>
caption	Maintain vertical alignment of figures
author	Ummels, Michael
copyright	Michael Ummels (2011)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.1
description	(no language specified) Knuth designed his original fonts with tabular figures (figures whose width is uniform); this makes some layout problems rather simple. In more recent times, fonts (such as Minion Pro), which offer proportionally spaced figures, are increasingly being used. The package provides mechanisms whereby such proportional figures may still be aligned in tabular style (for example, in the table of contents).

5815 *tablists* – Tabulated lists of short items

version	0.1 (2014-06-27)
last changes	2014-06-27
year	2014
description	(no language specified) This package tries to introduce a separation of text and style in tables by defining reusable table commands and a simple interface to define a style for a table. Furthermore the package defines commonly used column styles and a bugfix command for lists in tables. However, the author told us in March 2023: "I wrote [this package] about ten years ago, [...] since at that time no package with layout options for tabulars was available. [...] However since nowadays much better packages are available that do the same job, but are much more professional in code base, usability and results, I want to remove my package from CTAN."

5816 `tablor` – Create tables of signs and of variations

Web page on CTAN <https://ctan.org/pkg/tablor>

name	<code>tablor</code>
caption	Create tables of signs and of variations
author	Connan, Guillaume
copyright	Guillaume Connan (2008)
license	lppl = The LaTeX Project Public License (free)
version	4.07-g
description	(no language specified) The package allows the user to use the computer algebra system <code>XCAS</code> to generate tables of signs and of variations (the actual plotting of the tables uses the MetaPost macro package <code>tableauVariations</code>). Tables with forbidden regions may be developed using the package. A configuration file permits some configuration of the language to be used in the diagrams. The <code>tablor</code> package requires that shell escape be enabled.

5817 `tabls` – Better vertical spacing in tables and arrays

5818 `tblvar` – Typesetting pretty tables of signs and variations according to French usage

Web page on CTAN <https://ctan.org/pkg/tblvar>

name	<code>tblvar</code>
caption	Typesetting pretty tables of signs and variations according to French usage
author	Missier, Antoine
copyright	Antoine Missier (2018-2024)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.1 (2024-08-09)
last changes	2024-08-09
year	2024
description	(no language specified) This is a complete and easy-to-use package for typesetting pretty tables of signs and variations according to French usage. • The syntax is similar to that of the <code>array</code> environment and uses intuitive position commands. • Arrows are automatically drawn (with <code>PSTricks</code> or <code>TikZ</code>).

- Macros are provided for drawing double bars, single bars crossing zero values, intervals where the function is not defined, or for placing special values.
- Many features of variations tables can be customized.

5824 *tabu* – Flexible LaTeX tabulars

Web page on CTAN <https://ctan.org/pkg/tabu>

name	<code>tabu</code>
caption	Flexible LaTeX tabulars
author	Chervet, Florent
copyright	Florent Chervet (2010)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.9 (2019-01-11)
last changes	2019-01-11
year	2019

description	(no language specified) The package provides an environment, <code>tabu</code>, which will make any sort of tabular (that doesn't need to split across pages), and an environment <code>longtabu</code> which provides the facilities of <code>tabu</code> in a modified <code>longtable</code> environment. (Note that this latter offers an enhancement of <code>ltxtable</code>.) The package requires the <code>array</code> package, and needs e-TeX to run (since <code>array.sty</code> is present in every conforming distribution of LaTeX, and since every publicly available LaTeX format is built using e-TeX, the requirements are provided by default on any reasonable system). The package also requires <code>xcolor</code> for coloured rules in tables, and <code>colortbl</code> for coloured cells. The <code>longtabu</code> environment further requires that <code>longtable</code> be loaded. The package itself does not load any of these packages for the user. The <code>tabu</code> environment may be used in place of <code>tabular</code>, <code>tabular*</code> and <code>tabularx</code> environments, as well as the <code>array</code> environment in maths mode. It overloads <code>tabularx</code>'s X-column specification, allowing a width specification, alignment (<code>l</code>, <code>r</code>, <code>c</code> and <code>j</code>) and column type indication (<code>p</code>, <code>m</code> and <code>b</code>). <code>\begin{tabu}</code> to <code><dimen></code> specifies a target width, and <code>\begin{tabu}</code> spread <code><dimen></code> enlarges the environment's "natural" width.

5825 `tabular2` – Table typesetting with expl3 syntax

Web page on CTAN <https://ctan.org/pkg/tabular2>

name	tabular2
caption	Table typesetting with expl3 syntax
author	Ms_yam
copyright	Ms_yam (2023-2025)
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.4 (2026-03-16)
last changes	2026-03-16
year	2026
description	(no language specified) This package offers an experimental solution for table typesetting. It features a completely new set of input and output interfaces for tables, which diversifies the methods of input and output and enhances readability. At the code level, it is written using the expl3 syntax, completely eliminating any reliance on traditional low-level table commands.

name	tabularht
caption	Tabular environments with height specified
author	Oberdiek, Heiko
copyright	Oberdiek Package Support Group (2016-2019)
copyright	Heiko Oberdiek (2005-2007)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.7 (2019-12-29)
last changes	2019-12-29
year	2019
description	(no language specified) The tabularht package defines some environments that add a height specification to tabular and array environments. The default set of new environments take a value for their height in the first argument: defined environments are: <code>tabularht</code>, <code>tabularht*</code> and <code>arrayht</code>. If package tabularx is also loaded, the package also defines environments <code>tabularxht</code> and <code>tabularxht*</code>. The places where stretching is to happen are signalled by <code>\noalign{\vfill}</code> immediately after the <code>\\</code> that ends a row of the table or array.

5831 *tabularray* – Typeset tabulars and arrays with LaTeX3

Web page on CTAN <https://ctan.org/pkg/tabularray>

name	tabularray
caption	Typeset tabulars and arrays with LaTeX3
author	Lyu, Jianrui
license	lpl1.3c = The LaTeX Project Public License 1.3c (free)
version	2025C (2025-11-27)
last changes	2025-11-27
year	2025
description	(no language specified) LaTeX tables are implemented using TeX commands such as <code>\halign</code>, <code>\noalign</code>, <code>\span</code>, and <code>\omit</code>. In order to implement new features, many macro packages have modified the inner table commands inside LaTeX. This makes package code complicated, difficult to maintain, and often conflicts with each other. At present, the LaTeX3 programming layer is basically mature. This <i>tabularray</i> package will discard the old <code>\halign</code> commands and directly use LaTeX3 functions to parse the table, and then typeset the entire table. Under the premise of being compatible with the basic syntax of LaTeX2 tables, this macro package will completely separate the content and style of the table, and the style of the table can be completely set in keyval way.

5835 *tabulary* – Tabular with variable width columns balanced

Web page on CTAN <https://ctan.org/pkg/tabulary>

name	<code>tabulary</code>
caption	Tabular with variable width columns balanced
author	Carlisle, David
copyright	David Carlisle (1995, 1996, 2003, 2008, 2024)
license	lppl = The LaTeX Project Public License (free)

version	0.11 (2024-06-04)
last changes	2024-06-04
year	2024
description	(no language specified) The package defines a <code>tabular*</code> -like environment, <code>tabulary</code> , taking a ‘total width’ argument as well as the column specifications. The environment uses column types <code>L</code> , <code>C</code> , <code>R</code> and <code>J</code> for variable width columns (<code>\raggedright</code> , <code>\centering</code> , <code>\raggedleft</code> , and normally justified). In contrast to <code>tabularx</code> ’s <code>X</code> columns, the width of each column is weighted according to the natural width of the widest cell in the column.

5841 *talk* – A LaTeX class for presentations

Web page on CTAN <https://ctan.org/pkg/talk>

name *talk*

caption A LaTeX class for presentations

author Wiebusch, Martin

license lpl = The LaTeX Project Public License (free)

version 2.0

description (no language specified) The *talk* document class allows you to create slides for screen presentations or printing on transparencies. It also allows you to print personal notes for your talk. You can create overlays and display structure information (current section / subsection, table of contents) on your slides. The main feature that distinguishes *talk* from other presentation classes like *beamer* or *prosper* is that it allows the user to define an arbitrary number of slide styles and switch between these styles from slide to slide. This way the slide layout can be adapted to the slide content. For example, the title or contents page of a talk can be given a slightly different layout than the other slides.

The *talk* class makes no restrictions on the slide design whatsoever. The entire look and feel of the presentation can be defined by the user. The style definitions should be put in a separate sty file. Currently the package comes with two sets of pre-defined slide styles (*talk-simple.sty* and *talk-sidebars.sty*). Contributions from people who are artistically more gifted than the author are more than welcome!

5843 *tamefloats* – Experimentally use `\holdinginserts` with LaTeX floats

Web page on CTAN <https://ctan.org/pkg/tamefloats>

name tamefloats
 caption Experimentally use `\holdinginserts` with LaTeX floats
 author Lück, Uwe
 copyright Uwe Lück (2005)
 license lpl1.3 = The LaTeX Project Public License 1.3 (free)
 version 0.42
 description (no language specified) LaTeX's figures, tables, and `\marginpar s` are dangerous for footnotes (and probably also `\enlargethispage`). Here is a proposal (a 'patch' package) to help, by using `\holdinginserts` in a simple way. It replaces the original problem with a new one — it is an experiment to find out whether the new problem is less bad (or it is just a contribution to the discussion, maybe just a summary of previous work). The files provide further information.
 documentation (no language specified) *Readme*: <https://ctan.org/tex-archive/macros/latex/contrib/tamefloats/README.txt>

Web page on CTAN <https://ctan.org/pkg/tcolorbox>

name *tcolorbox*
 caption Coloured boxes, for LaTeX examples and theorems, etc
 author Sturm, Thomas F.
 copyright Prof. Dr. Dr. Thomas F. Sturm (2006-2025)
 license lpl1.3 = The LaTeX Project Public License 1.3 (free)
 version 6.8.0 (2025-09-09)
 last changes 2025-09-09
 year 2025

description	(no language specified) This package provides an environment for coloured and framed text boxes with a heading line. Optionally, such a box may be split in an upper and a lower part; thus the package may be used for the setting of LaTeX examples where one part of the box displays the source code and the other part shows the output. Another common use case is the setting of theorems. The package supports saving and reuse of source code and text parts. The package depends on the <code>pgf</code>, <code>verbatim</code>, <code>environ</code>, and <code>etoolbox</code> packages.

5872 *ted* – A (primitive) token list editor

Web page on CTAN <https://ctan.org/pkg/ted>

name	ted
caption	A (primitive) token list editor
author	Pégourié-Gonnard, Manuel
license	lppl = The LaTeX Project Public License (free)
version	1.06
description	(no language specified) Just like sed is a stream editor, ted is a token list editor. Actually, it is not as powerfull as sed, but its main feature is that it really works with tokens, not only characters. The ted package provides two user macros: <code>\Substitute</code> and <code>\ShowTokens</code> . The first is maybe the most useful: it performs substitutions in token lists (even inside braces). The second displays each token of the list (one per line) with its catcode (in the list, not just the current one), and can be useful for debugging or for TeX learners. Ted is designed to work well even if strange tokens (that is, unusual {charcode, catcode} pairs or tokens with a confusing meaning) occur in the list.

documentation	<i>Package documentation (French)</i> : https://ctan.org/tex-archive/macros/latex/contrib/ted/ted-fr.pdf

5887 termcal – Print a class calendar

Web page on CTAN <https://ctan.org/pkg/termcal>

name	termcal
caption	Print a class calendar
author	Mitchell, Bill
license	lpl1 = The LaTeX Project Public License 1 (free)
version	1.8
description	(no language specified) This package is intended to print a term calendar for use in planning a class. It has a flexible mechanism for specifying which days of the week are to be included and for inserting text either regularly on the same day each week, or on selected days, or for a series of consecutive days. It also has a flexible mechanism for specifying class and nonclass days. Text may be inserted into consecutive days so that it automatically flows around nonclass days.

5895 *testeq* – An equality test for use in MetaPost

Web page on CTAN <https://ctan.org/pkg/testeq>

name	testeq
caption	An equality test for use in MetaPost
author	Vieth, Ulrik
license	noinfo = noinfo
version	1.05
description	(no language specified) This file provides a general equality test macro for objects of any type based on code from Appendix D of The Metafont book, but adapted for MetaPost. Unfortunately it is no longer fully general, because MetaPost lacks the bitmap-oriented operations like cull and totalweight, which are needed when testing for the equality of two pictures. A particular useful feature of this package is the patheq macro to test for equality of two paths. This might prove handy when processing data files with the MetaPost graph package, that contain data for an unknown number of paths separated by blank lines. In that case one might use patheq to check whether the last path read is actually the same as the first one, having started over from the beginning.
on CTAN	https://ctan.org/tex-archive/graphics/metapost/contrib/macros/misc/testeq.mp
keyword	mp-supp (support tools and macros for MetaPost programming)

5904 *tex* – A sophisticated typesetting engine

Web page on CTAN <https://ctan.org/pkg/tex>

name	TeX
caption	A sophisticated typesetting engine
author	Knuth, Donald E.
copyright	D. E. Knuth (null)
license	knuth = Knuth License (free)
version	3.141592653 (2021-02-05)
last changes	2021-02-05
year	2021
description	(no language specified) TeX is a typesetting system that incorporates a macro processor. A TeX source document specifies or incorporates a number of macro definitions that instruct the TeX engine how to typeset the document. The TeX engine also uses font metrics generated by Metafont , or by any of several other mechanisms that incorporate fonts from other sources into an environment suitable for TeX. TeX has been, and continues, a basis and an inspiration for several other programs, including e-TeX and PDFTeX . The distribution includes the source of Knuth’s <i>TeX book</i> ; this source is there to read, as an example of writing TeX — it should not be processed without Knuth’s direct permission.

5906 *tex-converter* – Windows front-end to various LaTeX to HTML converters

Web page on CTAN <https://ctan.org/pkg/tex-converter>

Alias	TeX Converter
name	TeX Converter
caption	Windows front-end to various LaTeX to HTML converters
author	Mayer, Steve
copyright	Steve Mayer (1999)
license	other-free = Free license not otherwise listed (free)
version	2.6
description	(no language specified) TeX Converter is a Windows front-end to 4 programs that convert TeX to HTML — HeVeA, TtH, TeX4ht and LaTeX2HTML. These programs run in DOS and require complicated command lines. The purpose of TeX Converter is to make these programs easy to run.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/support/tex-converter/README
on CTAN	https://ctan.org/tex-archive/support/tex-converter
keyword	cvt-html (generate HTML from TeX-ish sources)

5908 *tex-extensions* – Proposals for extensions to TeX

Web page on CTAN <https://ctan.org/pkg/tex-extensions>

name	tex-extensions
caption	Proposals for extensions to TeX
author	Clasen, Matthias
license	noinfo = noinfo
version	(2003-02-07)
last changes	2003-02-07
year	2003
description	(no language specified) A bundle of proposals for extensions to TeX, implemented as change files to web2c v7.2. The extensions cover: • replacing floating point by integer arithmetic, in glue calculations; • introducing hyphenation classes (with a corresponding change to <code>patgen</code>); • implementing demerits for more than 2 consecutive hyphens; • providing ‘nestable’ and ‘under’ math accents; a primitive to switch to ‘cramped’ styles; provides generalised radicals with a left- and right-delimiter; implementation work for using the hz algorithm; • marginal tokens for hanging punctuation and hyphens.

Several files offering examples of use are also provided.

5912 *tex-gyre* – TeX Fonts extending freely available URW fonts

Web page on CTAN <https://ctan.org/pkg/tex-gyre>

name *tex-gyre*

caption TeX Fonts extending freely available URW fonts

author Jackowski, Bogusław

author Nowacki, Janusz Marian

license gfl = The GUST Font License (GFL) (free)

version 2.501

description (no language specified) The TeX-GYRE bundle consists of six font families:

TeX Gyre Adventor is based on the URW Gothic L family of fonts (which is derived from ITC Avant Garde Gothic, designed by Herb Lubalin and Tom Carnase).

TeX Gyre Bonum is based on the URW Bookman L family (from Bookman Old Style, designed by Alexander Phemister).

TeX Gyre Chorus is based on URW Chancery L Medium Italic (from ITC Zapf Chancery, designed by Hermann Zapf in 1979).

TeX-Gyre Cursor is based on URW Nimbus Mono L (based on Courier, designed by Howard G. Kettler in 1955, for IBM).

TeX Gyre Heros is based on URW Nimbus Sans L (from Helvetica, prepared by Max Miedinger, with Eduard Hoffmann in 1957).

TeX Gyre Pagella is based on URW Palladio L (from Palatino, designed by Hermann Zapf in the 1940s).

TeX Gyre Schola is based on the URW Century Schoolbook L family (from Century Schoolbook, designed by Morris Fuller Benton for the American Type Founders).

TeX Gyre Termes is based on the URW Nimbus Roman No9 L family of fonts (from Times New Roman, designed by Stanley Morison together with Starling Burgess and Victor Lardent and first offered by Monotype).

The constituent standard faces of each family have been greatly extended (though Chorus omits Greek support and has no small-caps family). Each family is available in Adobe Type 1 and Open Type formats, and LaTeX support (for use with a variety of encodings) is provided. Vietnamese characters were added by Han The Thanh.

There are companion maths fonts for several of these designs, listed in the **TeX Gyre Math** package.

5923 tex-gyre-math-terms – Maths fonts to match TeX Gyre Terms

Web page on CTAN <https://ctan.org/pkg/tex-gyre-math-terms>

name	tex-gyre-math-terms
caption	Maths fonts to match TeX Gyre Terms
author	Jackowski, Bogusław
author	Pianowski, Piotr
author	Strzelczyk, Piotr
copyright	B. Jackowski, P. Strzelczyk and P. Pianowski (2012-2014)
license	gfl = The GUST Font License (GFL) (free)
version	1.543 (2014-09-05)
last changes	2014-09-05
year	2014
description	(no language specified) The font provides maths support for users of the tex-gyre-terms fonts. The font is available in OpenType format, only; the fonts conform to the developing standards for OpenType maths fonts. For use with LuaLaTeX or XeLaTeX, support is available from the unicode-math package. The fonts are part of the TeX-Gyre-Math collection of fonts.

description	(no language specified) TeX2page makes Web pages from TeX manuscripts. It reads an input document that is marked up in a TeX format (viz, plain TeX, LaTeX, Texinfo), and produces an output document with the functionally equivalent HTML markup. TeX2page uses the same input file syntax, calling conventions, and error-recovery mechanisms as TeX, and thus demands no additional expertise of a user already familiar with TeX. TeX2page runs on modern instances of Scheme (e.g., mzscheme, where it is included as part of the install package on Debian GNU/Linux) and Common Lisp. The package does not appear on CTAN.

5950 *tex4ht* – Convert (La)TeX to HTML/XML

Web page on CTAN <https://ctan.org/pkg/tex4ht>

name TeX4ht

caption Convert (La)TeX to HTML/XML

author The TeX4ht Team

author Gurari, Eitan M.

license lpl = The LaTeX Project Public License (free)

description (no language specified) A converter from TeX and LaTeX to SGML-based formats such as (X)HTML, MathML, OpenDocument, and Docbook, providing a configurable (La)TeX-based authoring system for hypertext.

TeX4ht does not independently parse (La)TeX source (so it avoids the difficulties encountered by many other converters, arising from the irregularity of (La)TeX syntax). Instead, TeX4ht uses (La)TeX itself (with myriad macro modifications) to produce a helper DVI file that it can then process. This technique allows TeX4ht to approach the robustness characteristic of restricted-syntax systems such as [gellmu](#).

Full releases of TeX4ht are no longer made, both because it is technically difficult to do so and because their utility is questionable. Nevertheless, TeX4ht is actively maintained. So, current source files are held on CTAN, and updated from the development repository frequently. Creating the myriad derived files from them is nontrivial, and generally done with the Makefile in development, from which the TeX4ht package in TeX Live is updated.

version	2.0 (2018-12-08)
last changes	2018-12-08
year	2018
description	(no language specified) TeX and LaTeX provide few facilities for dates by default, though many packages have filled this gap. This package fills it, as well, with a pure TeX-primitive implementation. It can print dates, advance them by numbers of days, weeks, or months, determine the weekday automatically (with an algorithm cribbed from the <code>dayofweek.tex</code> file written by Martin Minow), and print them in (mostly) arbitrary format. It can also print calendars (monthly and yearly) automatically, and can be easily localized for non-English languages.

5962 *texdef* – Display the definitions of TeX commandsWeb page on CTAN <https://ctan.org/pkg/texdef>

name	texdef
caption	Display the definitions of TeX commands
author	Scharrer, Martin
copyright	Martin Scharrer (2011-2025)
license	gpl3 = GNU General Public License, version 3 (free)
version	1.10 (2025-02-17)
last changes	2025-02-17
year	2025
description	(no language specified) This (Perl) script displays the definitions of (La)TeX command sequences/macros. Various options allow the selection of the used class as well as package files and other factors that may influence the definition (before/after the preamble, inside an environment, ...). The script creates a temporary TeX file which is then compiled using (La)TeX to find the ‘<code>\meaning</code>’ of the command sequence. The result is formatted and presented to the user. Length or number command sequences (dimensions, <code>\char...</code>, count registers, ...) are recognized and the contained value is also shown (using <code>\the</code>). Special definitions like protected macros are also recognized and the underlying macros are shown as well. The script will show plain TeX definitions by default. LaTeX and ConTeXt are supported, including flavours (pdf(La)TeX, Lua(La)TeX, Xe(La)TeX, ...). The flavour can be selected using a command line option, or via the script name: <code>latexdef</code> will use LaTeX as default, etc.

5969 *texdoctk* – Easy access to package documentation

Web page on CTAN <https://ctan.org/pkg/texdoctk>

name *texdoctk*
caption Easy access to package documentation
author Ruedas, Thomas
author Harcombe, Keiran
copyright Thomas Ruedas (2000-2004)
license gpl = GNU General Public License (free)
version 0.6.0
description (no language specified) A Perl/Tk-based GUI for easy access to package documentation for TeX on Unix platforms; the databases it uses are based on the texmf/doc subtrees of **teTeX**, but database files for local configurations with modified/extended directories can be derived from them. Note that *texdoctk* is not a viewer itself, but an interface for finding documentation files and opening them with the appropriate viewer; so it relies on appropriate programs to be installed on the system. However, the choice of these programs can be configured by the sysadmin or user.

Now only distributed as part of **TeX Live**, which includes a Windows executable.

on **TeXLive** *texdoc*
keyword *view-doc* (application for viewing documentation)

5970 *texdraw* – Graphical macros, using embedded PostScript

Web page on CTAN <https://ctan.org/pkg/texdraw>

name	texdraw
caption	Graphical macros, using embedded PostScript
author	Kabal, Peter
copyright	Peter Kabal (1991-2019)
license	cc-by-4 = CC BY 4.0 (free)
version	v2r3 (2019-04-18)
last changes	2019-04-18
year	2019
description	(no language specified) TeXdraw is a set of macro definitions for TeX, which allow the user to produce PostScript drawings from within TeX and LaTeX. TeXdraw has been designed to be extensible. Drawing ‘segments’ are relocatable, self-contained units. Using a combination of TeX’s grouping mechanism and the gsave/grestore mechanism in PostScript, drawing segments allow for local changes to the scaling and line parameters. Using TeX’s macro definition capability, new drawing commands can be constructed from drawing segments.

5977 *texgit* – Download, access, and potentially execute files from git

Web page on CTAN <https://ctan.org/pkg/texgit>

name	texgit
caption	Download, access, and potentially execute files from git
author	Weise, Thomas
copyright	Thomas Weise (2023-2025)
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	0.9.6 (2025-06-20)
last changes	2025-06-20
year	2025
description	(no language specified) This package allows you to do the following things: • download files from a <code>git</code> repository and access them from LaTeX, • apply some post-processor to the downloaded files (e.g., strip comments and type hints from Python code) and access the post-processed files instead, • execute scripts or programs — either locally or downloaded from <code>git</code> repositories — and fetch their output into local files accessible from LaTeX,

- create local paths accessible from LaTeX which can be passed as arguments to the scripts or programs that are executed, e.g., as argument to a Python script that creates and stores a "matplotlib" plot under the path that it received as argument, allowing you to programmatically create figures and include them in LaTeX documents.

The package works a bit like **BibTeX** : Let's say your document is named `document.tex` . During the first `pdflatex` run, executed as `pdflatex document` , all the requests mentioned above, say, to download files from git repositories, are stored in the `aux` file. The paths corresponding to the requests point to an empty file at this stage. Then you would apply the `texgit` post-processor by calling `python3 -m texgit.run document` . This Python program executes all the requests and caches their results locally. During the second run of `pdflatex document` , the paths corresponding to the requests then point to the actual downloaded or generated files. All downloaded or generated files will be locally cached in a folder named `__git__` in your document's directory. You can delete this folder to refresh the files.

5992 *texlist* – Typeset program listings

Web page on CTAN <https://ctan.org/pkg/texlist>

name	texlist
caption	Typeset program listings
author	Forkosh, John
copyright	John Forkosh Associates, Inc (1999)
license	gpl = GNU General Public License (free)
version	(1999-01-30)
last changes	1999-01-30
year	1999
description	(no language specified) Texlist is a C program that produces LaTeX-typesettable listing of other C programs. The program acts as a filter, taking filenames on <code>stdin</code> and generating LaTeX2e output on <code>stdout</code> ; it is normally expected that the output will be redirected to a file. The output is a stand-alone LaTeX document; there is no provision made for including it in other LaTeX documents.

5993 *texlive* – A comprehensive distribution of TeX and friends

Web page on CTAN <https://ctan.org/pkg/texlive>

name	texlive
caption	A comprehensive distribution of TeX and friends
author	The TeX Live Team
license	other-free = Free license not otherwise listed (free)
version	2024
description	(no language specified) A comprehensive TeX system that you can install on your hard disk. It includes support for most Unix system architectures, including GNU/Linux and MacOS, and for Windows. The MacTeX distribution is an unchanged TeX Live plus some Mac-specific software, but is distributed in a separate archive. The TeX, PDF(e)TeX, XeTeX, LuaTeX, and other engines are provided in the distribution, with several different running formats each; a wide range of support programs and macro packages is also included. Beware: the download from CTAN is large (several GB); it comes in the form of an ISO image, and is available from CTAN mirrors through the 'Sources' link below. Other ways to acquire TeX Live include network installation, tarballs, and mirroring.

5999 texlive-dummy-opensuse – Dummy TeX Live RPM for use with Open SUSE

Web page on CTAN <https://ctan.org/pkg/texlive-dummy-opensuse>

name	texlive-dummy-opensuse
caption	Dummy TeX Live RPM for use with Open SUSE
author	Niepraschk, Rolf
license	lppl1.3 = The LaTeX Project Public License 1.3 (free)
version	2024.9999-2 (2024-11-14)
last changes	2024-11-14
year	2024
description	(no language specified) The package solves a problem relating to use of TeX Live under a Linux distribution: Linux distributions typically require LaTeX by default, but only distribute a rather out-of-date version. So, by default, the user who wants to use current TeX Live has to undertake "dirty tricks" to override the default Linux TeX. The solution is to declare that LaTeX is already installed; a later installation of TeX Live will therefore have no problem running on the system. The present package solves the problem for openSUSE Linux distributions.

6007 *texlogsieve* – Filter and summarize LaTeX log files

Web page on CTAN <https://ctan.org/pkg/texlogsieve>

name	<code>texlogsieve</code>
caption	Filter and summarize LaTeX log files
author	Lago, Nelson
copyright	Nelson Lago (2021-2025)
license	gpl3+ = GNU General Public License, version 3 or newer (free)
version	1.6.0 (2025-03-11)
last changes	2025-03-11
year	2025
description	(no language specified) <i>texlogsieve</i> reads a LaTeX log file (or the standard input if no file is specified), filters out less relevant messages, and displays a summary report. It is a texlua script, similar in spirit to tools such as texfot , texloganalyser , rubber-info , textlog-extract , texlogparser , texlogfilter , pulp , and others. Highlights: • Two reports: the most important messages from the log file followed by a summary of repeated messages, undefined references etc.; • The program goes to great lengths to correctly handle TeX line wrapping and does a much better job at that than existing tools; • Multiline messages are treated as a single entity; • Several options to control which messages should be filtered out; • No messages are accidentally removed; • The summary report is currently simple, but useful.

6008 *texmacs* – Structured text editor for TeX

Web page on CTAN <https://ctan.org/pkg/texmacs>

name	TeXmacs
caption	Structured text editor for TeX
author	van der Hoeven, Joris
license	gpl = GNU General Public License (free)
version	1.0.7.20
description	(no language specified) TeXmacs is a "structured text editor" with special support for mathematical expressions. The typesetting quality of the produced documents is intended to be as high as possible, i.e., comparable to the quality of documents produced with TeX; The user interface aims to be as natural and powerful as possible. In particular, the text you see on the screen corresponds exactly to what you get after printing. TeXmacs comes with a typed lisp extension language. Like emacs, this allows you for instance to redefine keyboard and menu actions. TeXmacs can also be used as an interface for computer algebra systems. In particular, automatically generated mathematical formulas are typeset in a satisfactory way. It is possible to generate LaTeX and PostScript output from TeXmacs. After compilation, the LaTeX output will resemble the PostScript output, although we guarantee no complete compatibility between TeXmacs and TeX. It is also possible to import "well written" LaTeX documents. The present release includes an interface with Ghostscript, which enables you to include PostScript (and some other formats) of images.

6010 *texmate* – Comprehensive chess annotation in LaTeX

Web page on CTAN <https://ctan.org/pkg/texmate>
name *TeXmate*
caption Comprehensive chess annotation in LaTeX
author Garcia-De Castro, Federico
copyright Federico Garcia (2005, 2006)
license *lppl* = The LaTeX Project Public License (free)
version 2

description	(no language specified) TeXmate formats chess games from very simple ascii input. The clean "1. e4 e5; 2. Nf3 Nc6; 3. Bb5 a6" will produce the same results as the sloppier "1 e4 e5; Nf3 Nc6 3.. Bb5 a6". The resulting format is fully customizable. There are 4 levels of commentary: 1 is the main game, 2-3 are commentaries. Each has its fonts, punctuation marks, etc., and these are also customizable. The package includes a tool for the creation of diagrams. The package works in conjunction with <i>skak</i> to produce diagrams of the current position automatically. For chess fonts, the package uses the <i>chessfss</i> system.

6013 *texnegar* – Kashida justification in XeLaTeX and LuaLaTeX

Web page on CTAN <https://ctan.org/pkg/texnegar>

name	<code>texnegar</code>
caption	Kashida justification in XeLaTeX and LuaLaTeX
author	Movahhedian, Hossein
copyright	Hossein Movahhedian (2020-2021)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	0.1e (2021-02-09)
last changes	2021-02-09
year	2021
description	(no language specified) In some cursive scripts such as Persian or Arabic, kashida is used to create justification. In this type of justification characters are elongated rather than expanding spaces between words. The kashida justification in <code>xepersian</code> has many bugs. Also it has problems with some fonts. The <code>xepersian-hm</code> package was the first attempt to fix these bugs in <code>xepersian</code>, which uses the <code>XeTeX</code> engine. This package extends the kashida justification to be used with the <code>LuaTeX</code> engine, too. Explanation of the package name: <i>Negar</i>, in Persian, is the present stem of <i>negaashtan</i> meaning to design, to paint, to write; and as a noun it means "sweetheart, idol, beloved, figuratively referring to a beautiful woman, pattern, painting, and artistic design".

6014 *texniccenter* – An IDE for LaTeX on MSWindows

Web page on CTAN	https://ctan.org/pkg/texniccenter
name	TeXnicCenter
caption	An IDE for LaTeX on MSWindows
author	Wiegand, Sven
license	gpl = GNU General Public License (free)
description	(no language specified) TeXnicCenter is an integrated development environment (IDE) for developing LaTeX documents on MS Windows (Windows 9x/ME, NT/2000/XP/Vista/7). Features include: • Project orientated integrated development environment for LaTeX documents; • Definition of unlimited ‘output types’ (i.e. DVI, PostScript, PDF);

- Fully customizable editor;
- Structure View that shows the structure of the whole LaTeX document, even if it is split into several files using `\input` or `\include`;
- Simple insertion of LaTeX constructs by menu or toolbar;
- Compilation of the project in the IDE: simple jumping to errors, warnings and bad boxes;
- Support for document templates;
- Fully customizable menu and toolbars in modern look and feel;
- Support for English and German languages.

6016 *texosquery* – Cross-platform Java application to query OS information

Web page on CTAN	https://ctan.org/pkg/texosquery
name	texosquery
caption	Cross-platform Java application to query OS information
author	Talbot, Nicola
copyright	Nicola Talbot (2016-2020)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.7 (2020-02-04)
last changes	2020-02-04
year	2020
description	(no language specified) This package provides a cross-platform Java application to query OS information designed for use in TeX’s shell escape mechanism. The application can query the following: • locale and codeset • current working directory • user home directory • temporary directory • OS name, arch and version

- Current date and time in PDF format (for TeX formats that don't provide `\pdfcreationdate`)
- Date-time stamp of a file in PDF format (for TeX formats that don't provide `\pdffilemoddate`)
- Size of a file in bytes (for TeX formats that don't provide `\pdffilesize`)
- Contents of a directory (captured as a list)
- Directory contents filtered by regular expression (captured as a list)
- URI of a file
- Canonical path of a file

All paths use a forward slash as directory divider so results can be used, for example, in commands like `\includegraphics`.

There are files provided for easy access in TeX documents:

- `texosquery.tex`: generic TeX code
- `texosquery.sty`: LaTeX package

This provides commands to run `texosquery` using TeX's shell escape mechanism and capture the result in a control sequence. The category code of most of TeX's default special characters (and some other potentially problematic characters) is temporarily changed to 12 while reading the result.

6017 *texpack* – Create documented LaTeX classes, packages and docs in a Unix environment

Web page on CTAN <https://ctan.org/pkg/texpack>

name	texpack
caption	Create documented LaTeX classes, packages and docs in a Unix environment
author	Lulli, Paolo
license	gpl = GNU General Public License (free)
description	(no language specified) Texpack is a little bundle of scripts to create documented LaTeX style, class files and docs. Texpack provides useful scripts for the automated creation of the skeleton required by *.dtx documented TeX files. It is useful both for creating packages (*.sty) and new classes (*.cls). Texpack also provides a command to automate the creation of commonly needed LaTeX skeleton files. This feature is mostly useful for the Italian author, but also provides the fast creation of a conditional preamble for handling dvi / pdf compilation.

6021 *texplate* – A tool for creating document structures based on templatesWeb page on CTAN <https://ctan.org/pkg/texplate>

name	texplate
caption	A tool for creating document structures based on templates
author	Cereda, Paulo Roberto Massa
copyright	Island of TeX (2021)
license	bsd3 = 3-clause BSD License (free)
version	1.0.6
description	(no language specified) TeXplate is a tool for creating document structures based on templates. The application name is a word play on <i>TeX</i> and <i>template</i> , so the purpose seems quite obvious: we want to provide an easy and straightforward framework for reducing the typical code boilerplate when writing TeX documents. Also note that one can easily extrapolate the use beyond articles and theses: the application is powerful enough to generate <i>any</i> text-based structure, given that a corresponding template exists.

last changes	2017-02-04
year	2017

description	(no language specified) This package contains the original source code and necessary attachment of the document "Proposal for Offering TeX Courses and Relevant Resources in Chongqing University". This proposal could be helpful if one is considering to suggest his/her university or company to use TeX (or LaTeX, or XeLaTeX) as a typesetting system, especially for Chinese universities and companies. The present proposal mainly explains the importance and necessity of introducing TeX, a typesetting system often used in academic writing, to students and teachers. This proposal starts from a brief introduction of TeX, then steps further into its fascinating application to academic writing and dissertation formatting. Finally, a set of possible implementation strategies with regard to the proper introduction of TeX and relevant resources to our university, is proposed.

caption	Package for setting nucleotide and peptide alignments
author	Beitz, Eric
copyright	Eric Beitz (1999-2025)
license	gpl2 = GNU General Public License, version 2 (free)
version	1.29 (2025-10-16)
last changes	2025-10-16
year	2025
description	(no language specified) TeXshade is alignment shading software completely written in TeX/LaTeX; it can process multiple sequence alignments in the .MSF and the .ALN file formats. In addition to common shading algorithms, it provides special shading modes showing functional aspects, e.g. charge or hydropathy, and a wide range of commands for handling shading colours, text styles, labels, legends; it even allows the user to define completely new shading modes. TeXshade combines highest flexibility with TeX output quality — all in a bundle that does not demand excessive development time of the user.

6031 *texsis* – Plain TeX macros for Physicists

Web page on CTAN <https://ctan.org/pkg/texsis>

name	TeXsis
caption	Plain TeX macros for Physicists
author	Myers, Eric
author	Paige, Frank
license	lppl = The LaTeX Project Public License (free)
version	2.18

description	(no language specified) TeXsis is a TeX macro package which provides useful features for typesetting research papers and related documents. For example, it includes support specifically for: Automatic numbering of equations, figures, tables and references; Simplified control of type sizes, line spacing, footnotes, running headlines and footlines, and tables of contents, figures and tables; Specialized document formats for research papers, preprints and "e-prints", conference proceedings, theses, books, referee reports, letters, and memoranda; Simplified means of constructing an index for a book or thesis; Easy to use double column formatting; Specialized environments for lists, theorems and proofs, centered or non-justified text, and listing computer code; Specialized macros for easily constructing ruled tables. TeXsis was originally developed for physicists, but others may also find it useful. It is completely compatible with Plain TeX.

6038 *textcase* – Case conversion ignoring mathematics, etcWeb page on CTAN <https://ctan.org/pkg/textcase>

name	textcase
caption	Case conversion ignoring mathematics, etc
author	Carlisle, David
copyright	David Carlisle (1997, 1998, 2019, 2022, 2023, 2025)
license	lppl = The LaTeX Project Public License (free)
version	1.05 (2025-02-16)
last changes	2025-02-16

year	2025
description	(no language specified) The <code>textcase</code> package offers commands <code>\MakeTextUppercase</code> and <code>\MakeTextLowercase</code> which are similar to the standard <code>\MakeUppercase</code> and <code>\MakeLowercase</code>, but they do not change the case of any sections of mathematics, or the arguments of <code>\cite</code>, <code>\label</code> and <code>\ref</code> commands within the argument. A further command <code>\NoCaseChange</code> does nothing but suppress case change within its argument, so to force uppercase of a section including an environment, one might say: <pre>\MakeTextUppercase{... \NoCaseChange{\begin{foo}} ... \NoCaseChange{\end{foo}} ...}</pre> In current LaTeX this package is obsolete. You can use the standard <code>\MakeUppercase</code> and <code>\MakeLowercase</code>, but it defines legacy names <code>\MakeTextUppercase</code> and <code>\MakeTextLowercase</code>.
documentation	(no language specified) <i>Package documentation</i> : https://ctan.org/tex-archive/macros/latex/contrib/textcase/textcase.pdf

6066 theanodidot – TheanoDidot fonts with LaTeX support

Web page on CTAN <https://ctan.org/pkg/theanodidot>

name	theanodidot
caption	TheanoDidot fonts with LaTeX support
author	Tennent, Bob
license	lppl = The LaTeX Project Public License (free)
license	ofl = The SIL Open Font License (free)

version	(2022-09-26)
last changes	2022-09-26
year	2022
description	(no language specified) This package provides the TheanoDidot font designed by Alexey Kryukov, in both TrueType and Type1 formats, with support for both traditional and modern LaTeX processors. An artificially-emboldened variant has been provided but there are no italic variants. The package is named after Theano, a famous Ancient Greek woman philosopher, who was first a student of Pythagoras, and supposedly became his wife. The Didot family were active as designers for about 100 years in the 18th and 19th centuries. They were printers, publishers, typeface designers, inventors and intellectuals. Around 1800 the Didot family owned the most important print shop and font foundry in France. Pierre Didot, the printer, published a document with the typefaces of his brother, Firmin Didot, the typeface designer. The strong clear forms of this alphabet display objective, rational characteristics and are representative of the time and philosophy of the Enlightenment.

6075 thermodynamics – Macros for multicomponent thermodynamics documentsWeb page on CTAN <https://ctan.org/pkg/thermodynamics>

name	thermodynamics
caption	Macros for multicomponent thermodynamics documents
author	Hammond, Karl D.
copyright	Karl D. Hammond (2022-2024)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	2.04 (2026-03-22)
last changes	2026-03-22
year	2026
description	(no language specified) This package makes typesetting quantities found in thermodynamics texts relatively simple. The commands are flexible and intended to be relatively intuitive. It handles several sets of notation for total, specific, and molar quantities; allows changes between symbols (e.g., A vs. F for Helmholtz free energy); and greatly simplifies the typesetting of symbols and partial derivatives commonly encountered in mixture thermodynamics. Changes of one's notes from one textbook to another can be achieved relatively easily by changing package options. The package offers a collection of macros and environments which are intended to make typesetting thermodynamics documents faster, more convenient, and more reliable. Macros include symbols for extensive, molar, specific, and partial molar properties; excess and residual (departure) properties; partial derivatives; heat capacities, compressibilities, and expansivities; saturation, mixture, and pure-component properties; Henry's Law parameters and activity coefficients; changes on mixing, fusion, reaction, sublimation, and vaporization; and sets of all moles/mole fractions/masses/etc. being held constant in derivatives. Conversion of notes between textbooks is trivial for textbooks supported by the package, and more general changes in notation are also possible through package options.

description	(no language specified) The bundle provides several packages for commonly-needed support for typesetting theorems. The packages should work with kernel theorems (theorems ‘out of the box’ with LaTeX), and the <code>theorem</code> and <code>amsthm</code> packages. Features of the bundle include: • a key-value interface to <code>\newtheorem</code>; • a <code>\listoftheorems</code> command; • <code>hyperref</code> and <code>autoref</code> compatibility; • a mechanism for restating entire theorems in a single macro call.

Web page on CTAN <https://ctan.org/pkg/thorshammer>

name	thorshammer
caption	Assessment based on AcroTeX quizzes
author	Story, Donald P.
copyright	D. P. Story (2020-2021)
license	lpl1.2 = The LaTeX Project Public License 1.2 (free)
version	(2021-06-24)
last changes	2021-06-24
year	2021
description	(no language specified) This package implements an idea by Thorsten G. for assessment using PDF quizzes produced by the exerquiz package. Thorsten not only wanted to pose multiple choice, multiple selection, and fill-in type questions, but also wanted to ask extended response questions that would be manually evaluated. Once the quiz is graded, the instructor may optionally pass the quizzes through an Acrobat action sequence to extract the student's name and grade from the quizzes. The extracted information is saved to a tab-delimited TXT file. The instructor can later merge this file into a larger spreadsheet. WARNING: Adobe Acrobat DC or Adobe Acrobat XI is required for post PDF-creation. Any PDF-creator application is supported.

6088 *threadcol* – Organize document columns into PDF “article thread”

Web page on CTAN	https://ctan.org/pkg/threadcol
name	threadcol
caption	Organize document columns into PDF “article thread”
author	Pakin, Scott
copyright	Scott Pakin (2013)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	1.0
description	(no language specified) The package combines a document’s columns into a PDF “article thread”. PDF readers that support this mechanism (probably Adobe Acrobat/Reader only) can be instructed to scroll automatically from column to column, which facilitates on-screen reading of two-column documents. Even for single-column documents, threadcol supports the creation of multiple article threads, which help organize discontinuous but logically related regions of text into a form that the user can scroll through as if its contents were contiguous.

6102 thumbs – Create thumb indexes

Web page on CTAN <https://ctan.org/pkg/thumbs>

name	thumbs
caption	Create thumb indexes
author	Münch, Hans-Martin
copyright	H.-Martin Münch (2010-2026)
license	lppl1.3c = The LaTeX Project Public License 1.3c (free)
version	1.1d (2026-01-18)
last changes	2026-01-18
year	2026

description	(no language specified) The package puts running, customizable thumb marks in the outer margin, moving downward as the chapter number (or whatever shall be marked by the thumb marks) increases. Additionally an overview page/table of thumb marks can be added automatically, which gives the names of the thumb objects, the page where the object/thumb mark first appears, and the thumb mark itself at its correct position. The thumb marks are useful for large documents (such as reference guides, anthologies, etc.), where a quick and easy way to find (for example) a chapter is needed.
documentation	(no language specified) <i>Package documentation:</i> https://ctan.org/tex-archive/macros/latex/contrib/thumbs/thumbs.pdf

6105 *tib* – A bibliographic preprocessor

Web page on CTAN <https://ctan.org/pkg/tib>

name	<code>tib</code>
caption	A bibliographic preprocessor
author	Kolb, Hans-Peter
author	Alexander, James
author	Kremer, Sebastian
license	noinfo = noinfo
version	(1989-12-11)
last changes	1989-12-11
year	1989
description	(no language specified) Tib is a collection of four programs for making citations and reference lists in TeX documents. The main program, Tib, operates on a TeX file with incomplete or keyed citations, looks up the reference in a database, makes the complete citation and on command, makes a list of the references. The citations in the source document are enclosed in (non-TeX) escape characters which Tib recognizes. The output of Tib is another TeX file with complete citations and reference list formatted with a number of TeX control sequences and with definitions for these control sequences, ready to be processed by Plain TeX, LaTeX, or whatever.
documentation	(no language specified) <i>Readme</i> : https://ctan.org/tex-archive/biblio/tib/README.1st

Web page on CTAN <https://ctan.org/pkg/tif2eps>

name	<code>tif2eps</code>
caption	A PostScript program for converting TIFF files to EPS
author	Jackowski, Bogusław
author	Strzelczyk, Piotr
author	Pianowski, Piotr
license	gpl = GNU General Public License (free)
version	0.79

description	(no language specified) TIF2EPS is a PostScript program for the conversion of TIFF files (ver. 6.0) to EPS ones. Compression (LZW, CCITT Fax, RLE, Flate, DCT) and ASCII85 encoding is available. The package may be used for generating colour- separated EPSes, 'EPS thumbnails,' and, moreover, little header EPSes, containing only a pointer to a source TIFF file. Employing Ghostscript guarantees portability and efficient processing.

6115 *tikz-3dplot* – Coordinate transformation styles for 3d plotting in TikZ

Web page on CTAN <https://ctan.org/pkg/tikz-3dplot>

name	<code>tikz-3dplot</code>
caption	Coordinate transformation styles for 3d plotting in TikZ
author	Hein, Jeffrey
copyright	Jeffrey D. Hein (2010)
license	lpl1.3 = The LaTeX Project Public License 1.3 (free)
version	(2012-01-11)
last changes	2012-01-11
year	2012
description	(no language specified) The package provides straightforward ways to define three-dimensional coordinate frames through which to plot in TikZ. The user can specify the orientation of the main coordinate frame, and use standard TikZ commands and coordinates to render their tikzfigure. A secondary coordinate frame is provided to allow rotations and translations with respect to the main coordinate frame. In addition, the package can also handle plotting user-specified functions in spherical polar coordinates, where both the radius and fill color can be expressed as parametric functions of polar angles.

6120 *tikz-bpmn* – A TikZ library for creating BPMN models

version	0.1
description	(no language specified) The built-in determination of the bounding box in TikZ is not entirely accurate. This is because, for Bezier curves, it is the smallest box that contains all control points, which is in general larger than the box that just contains the curve. This library determines the exact bounding box of the curve.

description	(no language specified) The general-purpose drawing package TiKZ can be used to typeset commutative diagrams and other kinds of mathematical pictures, generating high-quality results. The purpose of this package is to make the process of creation of such diagrams easier by providing a convenient set of macros and reasonable default settings. This package also includes an arrow tip library that match closely the arrows present in the Computer Modern typeface.

last changes	2019-08-19
year	2019

description	(no language specified) This package lets you draw Feynman diagrams using TikZ. It is a low-end modification of the TikZ-Feynman package, one of whose principal advantages is the automatic generation of diagrams, for which it needs LuaTeX. TikZ-FeynHand only provides the manual mode and hence runs in LaTeX without any reference to LuaTeX. In addition it provides some new styles for vertices and propagators, alternative shorter keywords in addition to TikZ-Feynman's longer ones, some shortcut commands for quickly customizing the diagrams' look, and the new feature of putting one propagator "on top" of another. It also includes a quick user guide for getting started, with many examples and a 5-minute introduction to TikZ.
